I'm vaguely interested in building some USB tools as well, but I don't yet know what my work schedule will be like to be able to commit much time (it's been hectic for the past two years or so, but I'm hoping that it'll calm down next month). Maybe email me with more details?

Indeed :-) A friend of mine is also going to buy one just for this
reason. I don't know anything about VHDL/FPGA but I think it will be an
interesting experience. The MSX One-Chip became a cult classic because
of this.

Rodolphe, you are who proposed money for SW authors,
remember ? :-)
Actually, myself expect not money to making some SW for Atari people.
As I made some things for free always. But I don't want to make SW
and while it to spend some not small money ... That's the problem. I
do not agree that making drivers is fun. It is hard task, and will
make person involved obligated for longer time. Plus, it is not
possible without having real HW - you can not make SW without testing.
Even if we have all USB-stack code perfect working (what I doubt)
making low level, HW specific driver is a lot of work. Therefore I
said that this is Catch 22 - you talk to not want to loose money. I
say the same :-)
Also, I don't expect any HW cheaper, or loaned. It has no much sense,
especially not in advance.
I'm not interested for some Atari clone. I only play sometime games,
and we know that not much of them runs on fast clones. What is with
all those people who bought CT6x ? Nobody of them can programming ?
We just need to realise what is known for decades: that SW for
microcomputers may cost more than HW. But Atari people is used to have
almost everything for free... This moment I see as only way for USB
that it will be commercial SW, with price, and sold, similar as
Hddriver.

> I never heart about USB connectivity on Milan and Hades

There are no USB drivers on Milan or Hades. However, these machines have
PCI, so the hardware is there. I don't think it's possible to buy
USB-cards today that are not USB2... The hardware is not a problem, the
problem is that nobody has written a USB-stack and hardware drivers
(yet). The problem is the USB stack - this is where 90% of the effort
has to be spent. Once the stack is up and running and is capable of
loading hardware drivers, it will be "easy" to support a variety of USB
interfaces.

> Who can connect a keyboars, mouse, memory stick, camera, web cam, HDD ???
> Nobody I think = no drivers available.

I'm not sure how realistic camera-drivers etc is. These usually requires
custom drivers. It's easier and more useful to create drivers for
HID-devices and mass storage devices, then you will need only one driver
to support all USB drives, one to support all mice etc.

In my opinion, you don't have to do this. People who claim "if you
don't give me the HW I wont make SW, period." are not worth of it.
From pragmatic point of view -- for me is more acceptable losing one
SW developer who don't want to pay for HW in advance than losing one
HW developer (you ;-) who wont have money for his development because
he was forced to give his HW prototypes for free.

Anyway, I wish you good luck with CTPCI!

Honestly, whole this thread, or at least 'part' about USB drivers offers nothing new, nothing not said in past.
People come with ideas how to do it, but nobody wants to do it. Talking about reasons why we 'lost' SW developers is maybe something what could be worth. But I doubt that 99% of Atari people is capable to accept facts, to realise where we are and why we are there...
Much bigger projects, with 1000 times more people involved are dead now, because of lack of SW. Remember BEOS ?

Whole idea of competing some Atari clone, expanded Atari with modern PCs is bad, that's my opinion. Things are now too complicated. It was relative easy before 18 years to make some IDE or SCSI IF, PS2 mouse adapter etc. And SW for it.
Now everything is much more complicated. But prices are low thanks to custom chips and mass production. And demand for new SW will never end. There is always something new, requiring driver. Today camera, printer etc. Tomorrow: cellar phone connection and who knows what all... Like you it or not, it is big business, and only mass production can assure low prices and required SW, drivers.

Just one thing more, considering USB on Ataris: I bought some USB chip with 8-bit data bus, DMA compatible about year ago. With idea that it will be good for ST's ACSI port. It is only USB 1.1, but USB 2 has no sense with slow ACSI. So far did nothing of SW for. HW part is pretty simple, but I really don't have some need for USB while I have possibility to attach CF card, PS2 mouse on ST, STE, Mega STE, Falcon.

Greetings,

Does anyone know if a TOS cartridge was made for the ST?

If so, any info on it would be interesting to read about.

Also, I'm interested in any known past uses if any, for the
"cartridge" part of TOS.

Example, on ST with no hard drive connected, if you try to ad
a Drive C: it relates to "cartridge".

Is this "cartridge" connected in TOS to the actual hardware cartridge port?

Or,

Is this "cartridge" something different?

Explain if possible.

While on the subject....

Where there any ST games released on a cartridge, if so what are the names
of them.

If any ST game cartridges, anyone know the type of chip(s) that were used in
the cartridge?

*you can e-mail me if you do not want to post* .\phantomm@bellsouth.net\.

phantomm <phantomm@bellsouth.net> wrote:

> Does anyone know if a TOS cartridge was made for the ST?

I don't know, but I would assume that there is no such thing. You can
only address 128kb on the cartridge port, which is far less than TOS
requires.

> Example, on ST with no hard drive connected, if you try to ad
> a Drive C: it relates to "cartridge".

> Is this "cartridge" connected in TOS to the actual hardware cartridge port?

Yes. You can connect a ROM to the cartridge port, and depending on what
you put in the header on the ROM, it can be available as a "disk" on the
desktop.

And btw I think that "c" relates to the cartridge and "C" to partition C
on a hard drive.

> Where there any ST games released on a cartridge, if so what are the names
> of them.

I don't know. The only program released on cartridge that I know of was
FaST Basic. The cartridge port was mainly used for stuff like samplers
and video digitizers.

I clocked it at 12Mhz. The only thing I had to do was to feed the ACIAs
with 500kHz and the floppy controller with 2Mhz. It doesn't work with an
external monitor connected though.

If I still had a Stacy I would upgrade it to 4Mb, add an IDE interface
and replace the HD with a CF-card. Then I would leave it alone :-)

I really would be interested in such projects!
Upgrading the STACY to 4Mb (I have seen a web page) looks a bit hard
for me: the guy says that you have to unsolder the previous ram chips.

But something to change the LCD screen would be great!

Guillaume.

As is said, cartridge has no enough space for TOS. In theory, it could
hold some TOS extension, update, but I never heard about such.

However, there is little confusion with that 'C' for cartridge. It is
shown as low case 'c', not capital. With reason - it is not like C
drive (hard disk). Cartridge handle in TOS supports only access to
executables from Desktop. You can not open some other file. So, it is
not equal as partition C. And it is logical, as c and C is actually
same for filesystem. In other words, cartridge holds not regular
files.

There are few games realised on cartridges, but not from big
publishers. Actually, cart port for gaming, SW is not really
interesting on Atari ST. It was popular on machines without floppies.
And with hard disk it has especially not sense.

Usually, you have only EPROM chips with proper content on cartridges.
ROM cartridge can operate in 2 modes: diagnostic and TOS mode. And I

think that diagnostic is where it is most used - for helping finding what is broken in Ataris. In TOS mode it is possible to set at which point of startup program activates, so can hold some drivers which will install before AUTO run - such is Paskud (IDE IF for cartridge).

Cartridge is intended for EPROMs and holding some smaller SW by Atari, but as we see there are some special things made for. Beside paskud was IDE CD ROM IF, digitazers etc. Now we have some Ethernet/USB IF ...

Considering games on cartridge: if you want something like that, and I saw that people thinks that it is cool idea, here are some hints: You can put on cartridge any game what can stay in 128KB (but can SFX pack it of course), and is only 1, executable file. There is a lot of such games, and it is possible to 'singlepart' many of them. Then you can run them from cartridge, whether with AUTO start, whether by double-click.
For instance: Battlezone (Atari) is short, and one part.

P.S.
Actually, you may have some data file (not executable) on cartridge.
But can access it only directly - with reading from proper cartridge
ROM address. So, same game may access some data directly, as binary
data from cartridge. But I think that better way is to make one-
parted executable, where datas are integrated.

ok,

That helps alot.

When I mentioned TOS on a cart. I was thinking of a older version of TOS.
Something like TOS 1.4, doesn't it only require around 192K?

Also, was TOS 1.4 released in a 4 chip version?

The one I have already has the 4 megs. (from Factory)
I have a switchable 8/16mhz 68000 board (Fast Technologies),
that I plan on installing if it will work. Have to desolder the
original 68000 chip. Before I do that, anyone know if there
would be a problem running it at 16mhz?

Changing out the LCD to something better would be nice.
And if one could get sometype of graphics card to work in
there....

Not sure about having to unsolder the previous Rams. If it is a original 2
meg machine,
I thought it was possible to upgrade by just plugging in the right memory.
Not sure if
thats correct. The last 2meg one I saw did seem to have a socket in the Ram
area.
Finding the right memory board may be a problem.

If you could find a broken 4meg unit, all you have to do is just unplug the
whole board
which holds TOS and the RAM and plug it back into the good machine.

As you probably know, It is just a large single board that holds the TOS and
RAM.
With 2 connections that plug into the main board. Similar to a Falcon Ram
Card in a way,
but on a larger scale and with the TOS of course.

My 4meg Ram does have some wire or jumper connections.

What type of IDE interface? Where can I get one? 8-)

Did yours have a Bus Connector?
My board has a place for one, is it as easy as soldering in the Bus
connector or are
there more componets that would need installing?

IIRC, the Bus connector, suppose to be similar to the Mega ST Bus?

That's true, but you can't put more than 128K on a cartridge.

Nowadays I think you have to build one yourself... Another option would
be a SatanDisk connected to the internal ACSI-connector. Then you can
get rid of the ancient SCSI-disk and the SCSI interface.

You can also replace the EL backlight with a reflective sheet and some
LEDs. If you do this you get rid of the two major power consumers in
the Stacy - the disk and the backlight. Fitting a battery might make
sense now :-)

> Did yours have a Bus Connector?

I don't know, I don't own a Stacy anymore. I had three, sold two and
broke one :-/

> My board has a place for one, is it as easy as soldering in the Bus

I have no idea, but if it's the same as the Mega ST bus then there are
some buffers involved.

What do you want to connect to this bus?

I had an ICD AdSpeed16 in one of my Stacys. It worked fine.

A tip when removing the old 68000: Cut all the legs, then desolder each
leg individually. If you don't do this, there's a good chance that
you'll lift or damage some tracks on the motherboard.

> Changing out the LCD to something better would be nice.

Forget about this, unless you manage to find a 9" VGA AND a graphics
card. The LCD in the Stacy is not bad, but most Stacys have burned-out
backlights by now. They use sheets of EL-film which are powered by a
transformer on the PSU regulator board. The film wears out and the
screen goes dim and virtually unusable. Replacing the EL-film with a new
one (or even better, reflective backlight sheet and white LEDs around
the edge) will do wonders.

> And if one could get sometype of graphics card to work in

Right, TOS 1.04 (and 1.02, 1.00) require 192KB. They were placed in
beginning in 6 (EP)ROM chips (32KByte), later in 2 (of bigger
capacity, 128Kbyte, but filled only 75%).

Original cartridge design is for 4x 32KByte EPROMs, but it went
obsolete soon, so many cartridges are with only 2 64KByte EPROM +
simple logic for correcting chip select. I saw even pic of cartridgde
with only 1, 16 bit EPROM of 128KB, but such EPROMs are guite
expensive and hard to find.

Of course, with bank switch is possible to have practically unlimited
data size, but it is not good for many of SW, so not good for TOS,
because that SW is made for linear addressing.

All this is not much relevant this days, I think. Cartridge for
storing SW in hard disk era is not interesting.

I can make cartridge adaptation of some game - 'Revenge of Mutant
Camels' seems as good idea - packed, it will occupy about 127KB.
With source code and comments, so may see how it looks. And try it...
even if no ST, EPROM programmer etc., you can try it with some
emulator (Steem, Hatari).

PP

Message-ID: <4a436021$0$12624$ba4acef3@news.orange.fr>
Source record: 1978

According to the Compendium:

ROM address is at FA0000 to FBFFFF (128k)

but just before: addresses from F00040 to F9FFFF are unassigned (640 KB)

ANd on machines after TOS 1.06 addresses from FC0000 to FF7FFF are free
(224 kB).

Grouping those 3 consecutive blocks (decoding all the addresses with a
bit of electronic) could lead to a 128+640+224 = 992 Kb of ROM.

Guillaume.

Yes. The SCSI card is an ACSI->SCSI converter that is connected to an
internal ACSI port.

Don't think so - at least not by Atari.
>
>Also, I'm interested in any known past uses if any, for the
>"cartridge" part of TOS.

The main uses were for plug-in scanner and audio/video digitizer hardware, also clocks/calendars that kept going when the machine was off, a VT100 emulator and a very crude Basic (FaST Basic). There were several versions of the Ultimate Ripper Cartridge used for extracting data from files, also some MIDI add-ons, IIRC. Atari also made a diagnostic cartridge for the ST range, though in theory it was only available to distributors and repairers.

>Example, on ST with no hard drive connected, if you try to ad
>a Drive C: it relates to "cartridge".

Only when you use a lower-case 'c'!

>Is this "cartridge" connected in TOS to the actual hardware
>cartridge port?

Yes, in a way; actualy connected to the main bus.

Oh wow - so it should be dead easy to remove the card (I'm not using mine
anyways - hard drive died and have been using a SatanDisk), and use the
SatanDisk or upcoming UltraSatan internally, right?

Thanks.

As usual people comes with ideas, but not much concrete, something
what can be done simple...

I made page about ST cartridge port usage, programming. There is a
working example how to put some game on cartridge.
Everyone can try it with some emulator - Steem, Hatari. And those with
EPROM programmers, cartridge on real machines.

http://ppera.07x.net/atari/CartST.html

There will be more stuff by time...

It will depend on what will work with it. There is a door on the side of the
STacy, and holes for
the connector on the MB. They must have had something in mind and dropped it
for what ever
reason. Probably due to lack of power with the battery.
Thought I would explore the possibilities while I have it apart and doing
the CPU upgrade
and etc.
I have paper info, that shows the Bus Port connected. The article describes
it as a "special bus port" with the same connections as the internal Mega
Bus port; the pinouts
are different from the Mega plug, but electrically, it's the same.

I would think any thing that works on the Mega ST Bus would work on the
STacy if the pins
are wired right. Why would they have the pins different?

That could be a sampling cart. I have a couple. I also have BATT II, a
game that came with a single channel 16 bit sound card iirc.

that's much appreciated.
Would you happen to know anything about the differences between the
ST cart port and the Falcon cart port?

Some ST carts will work with the Falcon and others like HandScanners don't.

I've always wanted to use my HandScanner with TouchUp on the Falcon.

It is the MV16 cartridge, shipped witt he BAT game (or BAT 2 ?).
http://www.atari-forum.com/viewtopic.php?f=19&t=9824

It is a sound card with a LineOut output (3.5 jack ?). Someone lent me BAT
long ago. I remember the sound had a quality similar to the STe DMA at lower
frequencies. It was used only by the game. I may recall that some
soundtracker used it, too, but I can't remember.

Hangon, I have a box of ST software sitting here, BAT, with an MV16. Its
8 bit 16 channel. No mention of frequency, but I think it was 12.5khz.
And yes, you could play it without the cart too.

Cart port on Falcon is basically same, "compatible". But it can not
be 100% compatible - Falcon has different CPU.
Then, it is tacted faster. If setting Falcon to 8MHz, STE mode helps
not, then it is SW incompat. problem very likely, and you can not do
much (except making working SW self :-) ).

Btw., to add to cartridge device list: I made EPROM programmer for
ST cartridge port in 1987. I still have it, but not use, as made later
better one, for parallel port.

ok, so it was connected to a stereo or speaker input for better sound during
game play?

Did it have a input and could you make your own samples with it?

Then, it is tacted faster. If setting Falcon to 8MHz, STE mode helps
not, then it is SW incompat. problem very likely, and you can not do
much (except making working SW self :-) ).

ok, the version of TouchUp that I have was especially made for use
on the Falcon. So I think it is sometype of hardware bug or problem.
I remember a hardware fix was suppose to be done, but never found
out if it ever came to be.
The Software works fine, except when it comes to Scanning, then you
get messed up scan. Have tried 2 different hand scanners and get same
result.

Btw., to add to cartridge device list: I made EPROM programmer for
ST cartridge port in 1987. I still have it, but not use, as made later
better one, for parallel port.

phantomm wrote:
> ok, so it was connected to a stereo or speaker input for better sound during
> game play?

Yes. I'm not sure, but I think the MV16 output was only mono. This output must be seen as a second "sound card" unrelated to the standard YM2149 output. I remember the MV16 output was only activated with digitized sounds and music during the game. It was absolutely impossible to get anything else from the card's LineOut (no soundchip, keyboard clicks, etc.).

> Did it have a input and could you make your own samples with it?

No, it was output only. And about the 16 voices... I'm pretty sure it was pure marketing. By looking to the replay routines on the forum I previously posted, it seems that it is able to output one 12-bit sample from a CPU interrupt routine. If all is here, it is far, far from the 16 DMA-driven voices we could imagine :-(

Both is possible. You can have a cartridge that installs a driver which
makes the cartridge show up as a regular drive - like a ramdisk or harddisk,
only read-only. In that case, it will use any available drive letter from
"C" up, just like any other disk drive - BTDT.

> You can put on cartridge any game what can stay in 128KB (but can SFX
> pack it of course), and is only 1, executable file.

Using bankswitching, you can have more then 128k, and with a driver that
maps the disk as a normal drive, this will be transparent to the application
- if it runs from harddisk, it will run from such a cartridge.

Those addresses may be free, but you can't use them on the cartridge port
because you have neither chip select signals nor address lines available to
decode/use them.

That's all correct. But we should clarify things about basic
cartridge usage first - as Atari designed it.

In fact, you may install some RAMdisk with content depacked from
cartridge ROM. Then is may be read/write in RAM, for temporal usage.
And of course, it may be more than 128KB by using bank switch. Only
that we can not write changes back to cartridge..... Wait.... It can
be possible if we use Flash EPROMs. Even if write is not supported it
can be achieved via tricks.
However, at this point we are almost reached attaching some CF card to
cartridge port. - For sure it is much better considering price/
capacity ratio, and can have straight regular filesystem access.
Paskud done it years ago.

Date: 2009-06-30 00:13:29 UTC
From: solO2 <so_o2@mailcity.com>
Message-ID: <cd7f30a0-496a-4a41-a8a5-01c371670733@37g2000yqp.googlegroups.com>
Source record: 1909

Hello!

Here is the entry of BITS to Sommarhack 2009.
It shows a horizontal hardware scroll of a very
big 1280x200 logotype graphic, and 4 big balls
of 1bpp bouncing. YM-2149 chip music.

This demo works only in 1040STe,
(extended ST Atari Coomputer).

http://thebitsclub.tripod.com/BITS46-ST-20090628.ZIP

Goddbye!
SoLo of BITS (bits.atari.org)

# 4592. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2009-07-02 09:56:14 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.0907020253480.11327@slate.spiritone.com>
Source record: 1910
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Hi everyone,

Just wanted to let people know I've started making the PS/2 mouse &
keyboard converter - Eiffel.

They are available at http://www.freemint.org/eiffel/eiffel.html if
anyone wants one and it has a link to Didier's original pages. I've
already shipped quite a few to folks over at the Atari Forum pages if
people want to look at those to get a feel for things. Any questions,
feel free to ask.

Thanks,

Alan.

# 4600. Re: MiNT : USB sticks ?

Newsgroup: comp.sys.atari.st

Message-ID: <h2qpoi$1qfi$1@energise.enta.net>
Source record: 1918

I looked into USB about 8-9 years ago.

As far as I can remember there are three different levels of driver
OHCI and EHCI etc. The more sophisticated ones require less work to
be done by the CPU which is probably better for a 680x0 based
stack.

I tried to find some info on the BSD websites that might point in the
right direction but drew a blank.

Everyone told me it is not an easy task to add USB into the kernel
but since it has been done for Linux and various BSDs there must
be some expertise out there and maybe someone who would enjoy
implementing it again ?

As 266 MIPS is much faster than the old Sparcstations where Java run
initially: yes.

It depends on what you mean by ï¿½some degreeï¿½.

Dunno. Firefox is in my opinion bloat software. Just look at it using an
older X11 Terminal -- you'll see frame by frame and border by border
drawn ... unusable.

Perhaps Epiphany is faster. Or a browser integrating the WebKit engine.

When I've used a lightweight browser on slightly older machines, it's
usually been Skipstone. Seemed to work out pretty well, but it does
involve having GTK on the system.

Yesterday I solved a problem with this game. It is very strange, because
I can run this game but another disk driver with HDDriver it is not
working, I can try it with ICD and everything it is OK.

# 4609. [Update] www.ataricq.org revamped

Newsgroup: comp.sys.atari.st
Date: 2009-07-07 18:33:37 UTC
From: GokMasE <gokmase@gmail.com>
Message-ID: <2c005d32-c9dd-4c02-8b38-5ec788a7e422@a7g2000yqk.googlegroups.com>
Source record: 1927

Hi all,

After a rather long period of no real news on my webpages, I decided something needed to be done about it. I have noted over time that updates have been slipping, often due to the fact that it involves more work to maintain a website consisting of handcrafted HTML-pages - especially when a site spans over wide areas such as icons archives, software support pages and so forth.

That is why I came to the conclusion that a Content Management System of some kind was needed to allow for easier maintainance. I did chose Joomla, since it seemed to be flexible and powerful enough and also is free to use. The downside with going the CMS route might be a loss of the original website feeling. However, when considering the option being a less frequently updated website with decreasing value to visistors I think the chosen path will turn out for the better.

What about The Orphaned Projects Page? Well, when working with moving all the website content for my www.ataricq.org page, it occured to me that moving the source codes to the very same website would make things even more convenient to handle - not to mention the advantage of suddenly having all of the TOPP sources available in catagories, and fully searchable through the website search engine!

Anyway, please have a look at the revamped website, and do let me know how you like it, or if there is something you find is missing.

Check things out here: http://www.ataricq.org/

Thanks,

/Joakim

From my experience after hard disk adapting a lot of games: Hddriver
is not best for gaming. If Timer C (200Hz timer) is stopped or works
different as is in regular TOS - Hddriver will stuck. It happens only
after game start, when it changes timers, vectors. So, if game needs
hard disk access (loading some files) after start it may happen that
game will stuck with hddriver. Examples: Defender 2, Dark Castle,
Car Vup etc.
I made some small TSR program which fixes it by reactivating Timer C
before hard disk access and restoring it's state after (for game). I
will post it on my site with source.
However, I use my hard disk driver for gaming and everything... It is
made to be not sensitive on Timer conditions + some other gaming
support things.
I will check H2O on my Falc...

# 4614. Falcon audio stuff for sale

Newsgroup: comp.sys.atari.st
Date: 2009-07-10 12:14:25 UTC
From: Martin Tarenskeen <m.tarenskeen@zonnet.nl>
Message-ID: <slrnh5ec51.rta.m.tarenskeen@localhost.localdomain>
Source record: 1932

Hi,

I have some interesting but unused stuff for the Atari Falcon.
Unfortunately my Falcon died years ago. Maybe someone is interested in:

Steinberg C.A.C ( Cubase Audio Clock )
Steinberg FDI ( Falcon Digital Interface )
Line Audio Design Jam OUT 8 ( Falcon 8 channel D/A convertor, 18 bit
res., 8 outputs )

just let me know.

Martin Tarenskeen

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

I regret that I don't know the current draw of the screen or original
HD. I am skeptical of your idea though, since the STacy's screen
seemed rather low-contrast, and I remember that those screens were
relatively low-power back in the day. The solid state idea might be
more of a help.

If I recall, there are two screws under the STacy logo on the face
that are needed to get enough cable slack to disassemble. It has been
too many years to clearly recall, although I do remember it being a
difficult job. May I suggest searching the deja.com archives? This
link may help:

Not just by plugging them in -- but it's not impossible. Some people
made adapter boards.

The LCD itself is not a problem. The problem is the EL backlight.
Replace the EL film (which is quite dim on most Stacys anyway by now)
with a sheet of reflective film and some LEDs. This will improve the
backlight and reduce the power consumption significantly.

That would be nice if the Coldfire could run FireFox. If so, I would use that as my browser instead of Highwire (good program, but needs Java support and the ability to do online buying/banking). Are we talking about a Mint version of Firefox or a Linux version? I have the latest version of Linux for the 68000 series on DVD. Had it working fine on the Hades060 before it went bye-bye.

The ColdFire MCF5474 processor (the one that will be on the ACP computer)
runs at 266 MHz for ~400 MIPS.

# 4633. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2009-07-17 02:03:21 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.0907161901460.30019@slate.spiritone.com>
Source record: 1801
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

# 4634. ATARI WANTLIST!

# 4653. Taskbar 4.12 released

Newsgroup: comp.sys.atari.st
Date: 2009-08-03 19:16:06 UTC
From: Jo Even Skarstein <joska@nvg.ntnu.no>
Message-ID: <h57d1m$lpr$1@orkan.itea.ntnu.no>
Source record: 1821

Taskbar 4.12 has been released today. A few bugs fixed and some features
added. The most important change is that Taskbar is now multi-lingual.
Currently only English, Germand and Norwegian is supported, but I'm
looking for volunteers to translate it to other languages.

Taskbar can be found at http://atari.nvg.org/download.html

Thanks for the page Guillaume! I've had my STacy for awhile now and I love it. I was stressed out the first time I took my STacy apart too. If Atari had tried, they could have actually made it hard. <LOL>

Most apps will run in monochrome mode (ST-High) and there are actually quite a few games, even some great ones that play on the STacy. Here is a list - I'm not sure that its even complete though:

ATARI ST MONO GAMES LIST

20,000 Leagues Under the Sea
8 Ball
Alpha Waves
Balance of Power
Balance of Power - The 1990 Edition
Ballyhoo
Battlezone
Beyond Zork - The Coconut of Quendor
Black Cauldo, The
Bob Winner
BorderZone
Borrowed Time
Brataccas
Bunny Bricks
Bureaucracy
Checkmate
Chess Champion 2175
Chess Player 2150
Colonel's Bequest, The
Conquests of Camelot
Corruption
Crystal Castles
Crystal of Arborea
Cutthroats
Deadline
Deathstrike

Donald Ducks Playground
Electronic Pool
Enchanter
Esprit
Fish!
Flight Simulator II
Flight Simulator II - Europ
Flight Simulator II - Japan
Flight Simulator II - Lake Huron
Flight Simulator II - Washington
Flip Side
Gnome Ranger
Gnome Ranger 2 - Ingrid's Back
Gold Rush!
Guild of Thieves, The
Hanks' Quest - Victim of Society
Hellowoon - Das Geheimnis des Zauberstabs
Hero's Quest
Hippo Backgammon
Hitchhikers Guide To The Galaxy
Hollywood Hijinx
Hoyle's Book of Games - Volume 1
Holye's Book of Games - Volume 2
Indiana Jones and the Last Crusade
Infidel
Ishar - Legend of the Fortress
Ishar II - Messengers of Doom
Ishar III - The Seven Gates Of Infinity
Jewels of Darkness
Jinxter
King's Quest - Quest For the Throne
King's Quest II - Romancing the Throne
King's Quest III - To Heir is Human
King's Quest IV - The Perils of Rosella
Knight Orc
Lancelot
Leather Goddess of Phobos
Leisure Suit Larry - The Land of the Lounge Lizards
Leisure Suit Larry 2 - Goes Looking for Love
Leisure Suite Larry 3 - Passionate Patti in Pursuit of the Pulsating Pecto
Loom
Lurking Horror, The
Mac Pan
Magnetic Scrolls Collection, The
Manhunter - New York
Manhunter 2 - San Francisco
Maniac Mansion
Megaroids
Millipede
Mind Forever Voyaging, A

Missle Command (High res version)
Mission
Moonmist
Myth
Nord and Bert
Not a penny more, Not a penny less
Ogre
Oil Imperium
Ooze
Oxyd (high res version)
Oxyd 2 (high res version)
Pawn, The
Perfect Match
Perry Mason - The Case of the Mandarin Murder
Planetfall
Plundered Hearts
Police Quest - In Pursuit of the Death Angel
Police Quest II - The Vengeance
Psion Chess
Scapeghost
Seastalker
Secret of Monkey Island, The
Sherlock Holmes - The Riddle of the Crown Jewels.
Silicon Dreams
Sorcerer
Space Quest - The Sarien Encounter
Space Quest 2 - Vohauls' Revenge
Space Quest 3 - The Pirates of Pestulon
Spellbreaker
Spinger
Starcross
Starglider
Starglider 2
Stationfall
Stone Age
Suspect
Suspended
Tennis (high res version)
tex McPhilip - Road to Divinity
Time and Magik
Tonight the Shrieking Corpses Bleed
Trinity
Ultima II - Revenge of the Enchantress
Ultima III - Exodus
Voodoo Girl Queen of the Darned
Wind Surf Willy
WIshbringer
Witness, The
Wonderland
Zak Mckraken and the Alien Mindbenders

Zak Mckraken and the Alien Mindbenders (demo)
Zork - The Undiscovered Underground
Zork I - The Great Underground Empire
Zork II - The Wizard of Frobozz
Zork III - The Dungeon Master

and of course, you can always plug an SC1224 in to play color games. Hope
that helps! :)

Sure, thanks a lot for the list.
Are there some car race games in mono??

Guillaume.

Source record: 1841

Well it looks like the Coldfire computer will be built.
I have been asked to send in my first payment, 200 Euro's,
which is about $280. I am going to do so, but I am
disappointed that I cannot use my credit card/PayPal to
do this. I am going to have to do a bank transfer which
I have never done. Anyone done this before?

Thanks Lonnie. I will do that. I am sure it can be done at my
bank, but I just wanted to see if there was anything I should
know about the transaction.

# 4675. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2009-08-27 21:49:02 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.0908271446060.1546@slate.spiritone.com>
Source record: 1843
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Well I went to the bank and got things started. Turns out
I did not have enough information for them. So I went
home and was going to email Medusa to get the info I needed
and there was an email for me stating they had set up a
Paypal account. So I went and used that. Much easier...

# 4679. PlayStation 3 :-(

Newsgroup: comp.sys.atari.st
Date: 2009-08-28 19:49:34 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4a9834ce$0$12661$ba4acef3@news.orange.fr>
Source record: 1847

Hi,

I was unfortunately victim of the YLOD syndrome with my PS3.

Here is the very sad video <http://eureka.atari.org/ylod.mp4>

It happened while I was watching "Dune" Blu-ray (a picture adapted
from the well known scifi author Frank Herbert). Y.L.O.D. = Yellow
Light Of Death. It means that the PlayStation 3 is broken. The ARAnyM's
host is so expensive to get repaired from Sony, that I think I'll
rapidly buy a new PS3 Slim to replace it. I think PS3 worth it :-)

The main drawback is that GNU / Linux is no longer available with
the new hardware. It's bad news, and I will not be able to build
ARAnyM myself, and submit official packages for future release.

Please apologize. The problem is probably caused by a too hot summer
season, I suspect. I hope someone else will follow the job on PS3 ...

I'm sure that some of the PlayStation fans appreciated the ARAnyM
port I've done on the platform, with the help of Gentoo developers.
<http://forums.gentoo.org/viewtopic-t-561746-highlight-aranym.html>

Here is the last screenshot <http://eureka.atari.org/screen_ps3.png>
Feel free to ask me if I can help building ARAnyM on PlayStation 3.

You're welcome,

Keep going !

> Wahou....
> I need to sit down.....pfff
>
> Please stop boring us with sony PS3...

I'm sorry, PlayStation 3 is a big-endian Cell (PPC64) hardware,
like the 68k CPU family in the ATARI computers. So it has an
interest to promote ARAnyM on this kind of machine, not so
present in the computers market. I hoped people understood,
if you don't. You may have forgotten your ATARI basic recipes.

I have Falcon30, Hades60, PS3, iPhone, Power Mac G4 all big-endian.

Did you noticed little-endian is so standard and untasty ?

You're boring !

# 4691. CTPCI orders are open

Newsgroup: comp.sys.atari.st
Date: 2009-09-01 14:35:46 UTC
From: Rodolphe Czuba <rodxxxxx.xxuba@free.fr>
Message-ID: <4a9d3149$0$409$426a74cc@news.free.fr>
Source record: 1759

Hi,

September is a great date to start the payments of CTPCI.
I'm very happy to open the final orders.
It's the result of a big work.

A page with price & shipping cost is available here :
http://www.powerphenix.com/CTPCI/English/prices.htm

For the less enthousiast of you, there is a page of benchs (not definitive
until the DMA is usable) :
http://www.powerphenix.com/CTPCI/English/benchs.htm

And the presentation of the board with new infos and photos :
http://www.powerphenix.com/CTPCI/English/overview.htm

2 last infos : Cubase audio 2.06 running and possibility to cut PCI SLOT
board for only 1 connector (Falcon case integration).

There are several ways to pay and I recommend you ways with the lower
fees/taxes...

The manufacturing will begin in october...
Some parts need more than 1 months to arrive here (direct from factory far).
Shipping is planned for November IF no manufacturing problem and no added
delay on some parts.
The order of shipping is simple : first payed is first shipped.
And the shipping of all boards will continue during 1 month...

There is no limit to order : if you want 10 boards, no problems ;-)
Contact me to get a reduce price for a such quantity.

I do not accept partial payment under 130 EUR...and only in 2 payments with
a max of 1 month delay between the 2.
Payments with more than 2 euros missing on total will have to be
complemented.

The number of produced boards will be matched on the number of order
received + 20% max.
Actually the chips are pre-ordered for all pre-ordered CTPCI + 40%...
This should cover the late people even in 2 months... even if I prefer to
sell all boards quickly ;-)

This is surely the unique batch of CTPCI. No others after.

If you have question that have no answer here, please email to me...I will
not answer on forums.

If you did not receive this message on your email, and like to receive the next news, please inform me.

Thank You for your support of Atari Hardware...

Regards

Rodolphe

ACEC 2009 VINTAGE COMPUTER AND VIDEO GAME SWAP MEET

GREAT NEWS ATARI FANS!!!

The Atari Computer Enthusiasts of Columbus will be holding the annual vintange computer and video game swap meet on Saturday September 12th 2009. It will be held at the same place as last year. As you might notice, we have a new name. This year we are going to include all vintage and classic computers and video games, systems, accessories, games, and software.

Oakland Park Community Building
980 Lenore Ave.
Columbus, Oh.

Right now the time for the swap meet is from 9:00 a.m. to 3:00 p.m.

Admission is FREE! FREE! FREE!

That is right, it is free for both vendors and shoppers! Vendors, please contact us to reserve tables. As it will be first come first serve. We may have to limit the number of tables for each vendor. We have a new feature this year that will allow dealers to pick out what particular tables they want. Please check out our web site for further information and updates.

# 4694. Latest Atari Emulators with TCP/IP

Newsgroup: comp.sys.atari.st
Date: 2009-09-03 01:32:45 UTC
From: FMH <fmhcentral@gmail.com>
Message-ID: <748e0c8e-a763-4fe5-8be0-4674003377ac@w10g2000yqf.googlegroups.com>
Source record: 1762

Hello,

I am interested in hearing about other folks experiences with the latest Atari ST Emulators for Windows and Mac machines. I have not been following this scene for the past couple of years though. I think I must have tried them all in one form or another over the past 16 years in commercial, demo, or freeware forms.

What I am after is an Atari Emulator that I can use the TCP/IP stack of the host Operating System (Windows or OS X) from within the Atari Emulator. Like I was able to do with my Mac 8500 running MagiCMac under Mac OS8.51. There I am able to use IConnect in MagiCMac to surf the Web with CAB. I no longer use this machine so I'd like to do this with my current Mac or Windows machine. I want to try Highwire and other applications under emulation without having to setup my TT.

If anybody has been able do this please post your setup here with explicit instructions on your setup or how to do it.

Thanks

I think Aranym with AFROS is your best (only?) choice. AFROS comes with
networking already set up.

MagiCMacX (the OS X version of MagiCMac) does not have any ability to
use the host computer's networking stack. There is a plug-in system
available, but no-one has ever written one to add it AFAIK.

Maybe the PC version will let you do it, I don't know.

Aw Ben that's too bad. If I'd seen your message before I put it to auction I would have contacted you, but I don't get online much anymore these days. I will also be selling a Mega ST4 upgraded with a FastTech 25mhz upgrade (software-switchable between 25mhz and 8mhz). The Mega is in good shape (a little cleaner than the one I'm auctioning now actually) and the upgrade works great. I believe it has a TOS upgrade but I can't remember which version (I'm not at home now). Let me know if you are interested, and I can send you some pictures and more complete details. I'd really like these to go to good people who really appreciate Ataris rather than just any old somebody.

You can contact me at micahbrunt (at) gmail.com, or mbrunt (at) yahoo.com

Have you tried the COPS control panel? I have had this happen to me
from time to time. Sometimes it is just as simple as the order of
loading of the CPX's. Try loading just one CPX file and see if that
works. Also, try booting from a disk with some CPX's on them. I have
also had many instances where the COPS control would not work, but the
Xconrol panel would and vice versa.

Falcon030 with 16meg of ram

# 4714. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2009-09-12 20:20:43 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4AAC029B.7040608@atari.org>
Source record: 1782

Hi,

There's a 0.9.9 release of ARAnyM <http://aranym.org/>, so
the *miniPack* <http://eureka.atari.org/miniPack.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 4719. AtarICQ 0.174 is released

Newsgroup: comp.sys.atari.st
Date: 2009-09-19 14:15:19 UTC
From: GokMasE <gokmase@gmail.com>
Message-ID: <14c42fd6-1dc0-466a-a8b1-9eac933da1f2@j9g2000vbp.googlegroups.com>
Source record: 1787

AtarICQ 0.174 is released

Finally! A new release is now available, and for the first time in 4-5 years there is now a new OVL too. The new OVL is more than anything else targetting some rather serious stability problems, some of which where causing problems exclusively under MiNTnet/gluestik, and then there was the one which prevented aICQ from running on a 68000 cpu. In other worse, this new version should be well worth a closer look, especially if you have had problems with stability or performance in the past!

A huge thank you goes to Denis Huget who has made this new release possible by his great work on the OVL.
THANKS!

Important changes in the latest release:

1. AtarICQ is now able to cope with environment variable FONTSELECT when a full path is submitted instead of a process name. If a full path is sent, aICQ then tries to start the font selector (if not already running).
2. Fixed a bug in the contact list code that under some circumstances would cause a crash when swapping contacts by using up/down ARROWs.
3. Removed a debug messages that was accidently left in the final 0.173-release. It was a text message written to screen/console.
4. Fixad a small bug in the code for manually resorting (by dragging) of the TABs in the message window.
5. New feature added. The shortcut ALT+X will now trigger aICQ to remove all temporary contacts that exist at the time. The main benefit is to be able to quickly sweep your contact list clean from ICQ spammers. (Normally, you have all your contacts on the permanent list)
6. Slightly changed code for evaluating the status of online contacts. Should avoid confusion when it comes to clients using exotic status values.
7. New keyboard shortcut, ALT+H, will toggle the hiding of offline contacts.
8. OVL sources are branched from the 0089 version (newer sources were lost) sad smiley
9. OVL tweaked to cure problem where a large SSI contact list would potentially cause the OVL to hit an infinite loop (thus freezing)
10. Speeded up the automatic requesting of basic user info to reval the nickname of UINs loaded from the SSI list.
11. Fixed a fatal bug which would strike under specific circumstances when requesting basic user info for a UIN, and the server didn't reply. (NOTE: The chase for this particular bug has been going on for

3-4 years, the challenge being that it was very hard to reproduce reliably)
12. OVL will now work better with 68000 CPU (no more odd address access)
13. Improved the routines keeping track of server requests, timeout of data, etc.
14. Fixed a problem with font size in the text input field for outgoing messages, striking under old Single TOS and standard AES/VDI.
15. Cured a small memory leak which happened when requesting extended user info.
16. Changed default behaviour:
-Hiding offline contacts = OFF
-Auto switch to new message = ON
17. AtarICQ now keeps track of incoming typing notifications, to be able to let them "time out" after a certain time of inactivity from the other end. This time is currently set to 20 seconds, after which the typing notification icon will be removed.
18. OVL can now successfully send messages to the AIM/ICQ-clone Trillian, which turned out to be rather picky.

NOTE: At this time (2009-09-19) you might notice that some of your friends from your contact list aren't listed as online despite being very much logged on and available. The reason for this is more than likely that AtarICQ still doesn't posses the ability to update the server side list, hence all contacts not present there might be listed as offline at all times. The only way to solve this is to either use another ICQ client to update the list, or hold your breath until AtarICQ is able to do this.. winking smiley

Oh, and you can find the new release here:

http://www.ataricq.org/

Have fun, and don't forget to share your thoughts on this relese with us,
after all, feedback is what keeps things like this rolling..

Regards,

/Joakim

# 4723. EtherNAT problems

Newsgroup: comp.sys.atari.st
Date: 2009-09-22 09:16:16 UTC
From: "J.-Luc" <Myname.Mysurname@myisp>
Message-ID: <4ab895df$0$17781$ba4acef3@news.orange.fr>
Source record: 1791

Hello,

A few weeks ago, one of my 2 EtherNATs broke down.
Then, I switched with the one on my second machine, that I only
turned on when needed to backup the main one.
Since then, the second EtherNAT has been working very often, and
then started becoming unstable, making the system hang while file
transfers from/to the PC, just like did the previous one before
it stopped working.
I've sent the first board to Sweden to repair, and I hoped it
could be fixed before the second one would stop working too.
Unfortunately, the second board decided to fail yesterday, while
transfering some important files to my PC.
After a couple of retries, I gave up, unplugged the board, plugged
the old EtherNEC back in the ROM port, replaced the EtherNAT driver
with the EtherNEC's one, and then could access the net again.
I am very angry that those very expensive boards only worked a few
months - less than a year, in fact, because it took some months
from the time I got them and the one I decided to switch from
MagiC! to MiNT so I could use them -, while older less expensive
boards still work fine after many years (at least 5, IIRC).
Well, in fact, I had to switch down the MoBo from 25 to 20 MHz for
the computer to boot with the EtherNEC. Otherwise, it would reboot
again and again after copying the TOS in RAM.
But, now, file transfers last very long, at only 11~18 kb/s, where
they reached up to 140~180 with the EtherNAT.
So I am wondering if the driver I use (Enec6.xif) is the good one.
Do some of you there use EtherNEC with CT60/63'ed Falcons ?
Which driver do you use ?

Regards,

(Unlucky) J.-Luc

I use ne2kenec.xif from Odd Skancke:
http://assemsoft.atari.org/ne2k/index.html

Boy, am I glad I didn't buy an EtherNAT...

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 35 AMD64
aranym-0.9.9.linux.ix86.rpm 65 ix86
aranym_0.9.9.linux.amd64.deb 26 AMD64
aranym_0.9.9.linux.i386.deb 33 i386
aranym-0.9.9-cygwin.zip 171 i386
aranym-0.9.9-macosx.dmg 101 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 35 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (161), Windows (171), Macintosh (101) = total 466.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

This is a little bit unfair. You're probably one of TWO cases when
I've heard their ethernats have some problems... two cases from
hundreds! I don't understand why are you crying here, spreading words
like that and don't send those (from your point of view) faulty
devices to Nature guys asking them for fix / explanation / test if
it's REALLY ethernat issue and not your falcon/ct60/whatever.

# 4728. Re: ATARI FONT ON MOVIE AD!

Which movie? Couples Retreat? I've seen a poster for that but no sign
of an Atari Font (schmoltzy rom-coms don't seem very compatible with
the modernist style of the Atari font either).

# 4729. Problem with Eiffel

Newsgroup: comp.sys.atari.st

Dear All,

I have some problem with my Eiffel interface, I do not know why, but
sometimes (not ever) when the system crashed and I have to reboot the
computer, I have information Keyboard failure on the screen during
boot computer. And the the keyborad and mouse may not work, but
sometimes nevertheless keyboard and mouse work fine.
Similarly when reboot computer again return to good work and on the
screen I have information "Keyboard OK".
Does anybody know what is the reason ?

Best regards
Piotr Mietniowski

# 4731. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2009-09-25 08:31:32 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.0909250129550.4981@slate.spiritone.com>
Source record: 1799
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

No, but a few more details...

Is this on a Falcon ? CT60 ? bus accelerated ? any more details about
your system ?

Alan.

In the CT60 control panel you can select the "New boot" method for your
hard disk. That will then show the Eiffel version.

You can get the latest released one from Didier's pages at...

http://pagesperso-orange.fr/didierm/eiffel-e.htm

It's the 1.10 firmware. You can flash that to the device with the tools
that Didier provides.

Alan.

I use firmware 1.10 but the problem repeat again. For example
yesterday I shoutdown normally the system (MiNT) and everything it was
OK, but today when I run the computer I saw the Keyboard Failure. I
dont know why.

I use firmware verion 1.10. For example Yesterday I shutdown the
system normally (MiNT) and it was OK, but Today when I run the
computer I saw again Keyboard Failure, I dont know why ?
What can I do?

You could try going back to the "Old boot" method and therefore you
don't get the "Keyboard ..." messages at all.

Alan.

The WEB site turned into a classic blog.

Thanks. That's kind of you for Google searching.
Do you know about the *ATARI Search Engine* I'm maintaining ?

<http://www.google.com/coop/cse?cx=014753128619202207476%3Atzogojpdahi>

More than 600 bookmarks to hit the ATARI scene. A kind of ATARI WEB 2.0.

Regards,

Hi everyone,

Just wanted to let people know I've started also making the ROM port
ethernet interface - EtherNEC.

They are available at http://www.freemint.org/ethernec/ethernec.html if
anyone wants one and it has a link to Lyndon's original pages.

Any questions, feel free to ask.

Thanks,

Alan.

Source record: 1875

Hello,

I've been trying to post this but I am having problems with my usenet provider. I have found a source for Coldfire M5485EVB boards for $125USD each. It is an ebay auction here:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=180412905576&ssPageName=STRK:MEWAX:IT

The guy has around 14 of them now and I am willing to build a complete system to ship. The details are on my site here. http://www.atari-source.org/node/72 You need to act quickly if you want me to build a system for you. If you do it on your own, you will need a lot of different resources in order to get the boards into a usable state with firetos. My price for the complete system is $500USD + shipping. If enough people buy them from me (around 10 definite preorders) I will be able to use the modest profits to buy Didier Mequignon one of these which will go a long way into ensuring support.

Please don't request one of these systems from me if you would buy the ACP machine ordinarily but won't now because you have this. Also please understand that the software/hardware solution is far from perfect and that this is a developer system first and foremost.

Thanks a lot for maintaining such a lot of nice ATARI softwares.
I must be grateful for the very good Smurf GPL, I do really enjoy.

But may I suggest you to test programs with the ARAnyM *miniPack*
<http://eureka.atari.org/miniPack.zip> that I'm maintaining ? 7up
that I was making usage in a previous version, seems quite difficult
with the new 2.33 release. You may see it by yourself, whatever host
machine you're using Macintosh or PC. I may test it on my own Hades 60.

I'm running nicely quite a lot of softwares with the miniPack, really.

I wish it can help you debugging.

Regards,

## 4770. Once again with MiNT install problems...

Newsgroup: comp.sys.atari.st
Date: 2009-10-08 10:54:27 UTC
From: "J.-Luc" <Myname.Mysurname@myisp>
Message-ID: <4acdc4e3$0$927$ba4acef3@news.orange.fr>
Source record: 1888

Hello,

Well, it seems it'll never end...
My disk crashed almost a week ago, and all my backups since I intal-
led MiNT seem corrupted (or, maybe, only readable from a working
MiNT system with unix stuff ?).
I need to convert a partition to fat32 for easyMiNT to install, but
I can't find the utility for this. I did it once, and made a howto
that I saved... on the tapes that are no more readable. :/
I thought it could be something like mkfatfs, but the only thing I
could find only seems to run under MiNT (mkfatfs, within freemint
archive.
Anyone that could tell me where I can find how to do ?
And, this time, I'll keep it on different places and media...

Regards,

J.-Luc

Source record: 1889

Hello,

Is there any sort of interface that would allow me to use a CF or SD
card as storage on an ST?

I want to copy off all the files off my 3.5inch floppies but most of
them won't read on my PC (many are formatted for 82Tracks10Sectors).
Just thought this might be an idea to get round the problem.

Cheers
Ely

EasyMiNT does not need a FAT32 partition. Did you mean ext2?

EasyMiNT installs from a normal FAT16 partitions. If you want/need to
initialize a FAT32 partitions without MiNT you can use HD-Driver 8.2x.

Yes. I'm currently using 8.22 - but the install fails when trying to
copy the unix stuff to the soï¿½created partition.

>> I can't find the utility for this. I did it once, and made a howto
>
OK, it seems that EasyMiNT isn't the best way to do what I want.
Here it is :
1- all partitions from C to P are for TOS and must be readable by TOS applications. So, no "exotic" format.
2- I may have to switch back to MagiC! in some cases - like now, as I need to access LFNs and run some applications that would not run correctly under plain TOS -, so some MagiC! related stuff may occupy some space on those TOS partitions.
3- MiNT unix stuff *must* install on a partition above P. As Q is reserved for archiving data before they are backuped, the next free one is R.

Now, what happens when I try to install :
0- R is partitionned as LNX type with HDï¿½Driver 8.22 utility. Q is a 4095 MB partitionned as F32 type and contains ~3000 MB data at this time. Q is fully readable under MagiC!. No probllem with it.
EasyMiNT folder with BASIC, NET and STANDARD packages is temporarily stored on O, from which it will be run.
1- if I run EasyMiNT from plain TOS, it will complain that MiNT must be started from AUTO folder, and bring me back to desktop. So,
2- I install a very light MiNT stuff on C, with cnf only launching XaAES. XaAES cnf itself only handles display resolution, sets HOME & CLIPBRD, and launches THING desktop. It might hardly be lighter...
3- Then, if I start EasyMiNT, it finds R as LNX and starts installing, achieving step 1/6. But, when at step 2/6, as it would create MINT folder on to C, it quits with error, because MINT already exists where it wants to create it. And I can't either erase this folder, as it is hold by the system at the time MiNT is running.
4- So, I decide to specify another temporary destination for MINT folder. It will be N until installation is complete, and then I reboot to MagiC! from which I erase MINT folder on C and transfer MINT folder from N to C. I do this, and everything seems to go fine (except I have to press ESC once when it creates the AUTO folder, and three other times after this step, else nothing seems to happen, no matter the time I wait), and the system reboots.
5- At this step, the installation ought to restart at the point it was before reboot, but as MINT is on N, it doesn't. So, I restart it manually and it begins unpacking and copying unix stuff to R, which it obviously

can't achieve, according to the error messages it displays until it ends.
I reboot to MagiC!, erase the MINT folder I created on C and tranfer the one EasyMiNT created on N, then I edit both MiNT and XaAES cnf files to match the real place (C instead of N).
6- When I reboot under MiNT, it states that R has to be checked, then can't launch fschek, then tries to launch SH.TOS, which it can't find, and then reverts to it's internal shel, from which I can't do anything - neither execute TOS, PRG, APP programs, nor the SH and FSCHECK.SH stuff that are into C:\MINT\BIN -. I tried all this, the only thing I could do then was to type exit and reboot to MagiC!.
So, from what I could understand, R ought to be ext2 type, but as it obviously isn't, nothing can work.

I know there must not be much people that need to install to partitions above P... but, hey! it had to happen, hadn't it ?
Well, if anyone has any idea on how I could do this...

Regards,

J.-Luc

>
> [many problems with EasyMiNT...]

Well, it's funny, but I found a way to achieve what I wanted to do.
After I reformatted my disk 3 times and repeated as much times the process I described in my previous post, I rebooted to MagiC! after step 6 (see previous post) and accidentally deleted the EASYMINT folder created on C:.
Then, I don't know why I did it, but I started again the install process from O:, and all went fine straight to end - I had to press the ESC key a couple of times, as I wrote it earlier, that's all -, and now my system is running fine again.
I'm wondering why it did behave this way, but since the beginning it has never gone the way it ought to.
Anyway, now all seems fine, except for the CD-ROM drive that is not recognized though it works fine under MagiC! and Litchi that doesn't save the files after transfer is OK.

Hello,

there is a new version from SuJi.

- Some changes in the docu, Thanks to Peter A. West!
- SuJi use default values if it found an old "suji.inf"

SuJi is a replacement for MGSEARCH which is bundled with MagiC, but
it can also be used under other operating systems.

<http://home.ewr-online.de/~gstoll/>

In addition, Gerhard built in a powerful customizable directory
listing function in the last edition - this works with
deeply-nested files such as often found on CDs which defeat most
other listing programs.

You might try a SCSI card reader. That should work. ou can
still find them on the web. A Jaz drive is another option.
That is what I use and it works fine.

# 4788. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2009-10-18 18:30:58 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4adb5ee2$0$925$ba4acef3@news.orange.fr>
Source record: 1706
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

An IDE interface would, provided you use a BigDOS partition and an
IDE2CF adaptor cable. And of course there is the UltraSatan SD card drive.

# 4796. "QL & Mac are 25" international event Oct 31-Nov 1, 2009 (Atari ST in exhibition)

Newsgroup: comp.sys.atari.st
Date: 2009-10-22 18:19:40 UTC
From: Pete <peterwinter321@gmail.com>
Message-ID: <d6915cbe-7c8a-4513-b245-e2d6eeb1e9b1@h2g2000vbd.googlegroups.com>
Source record: 1714

Hi all,

2009 is the year of the 25th anniversary of breaking innovations in personal computing. Early 1984 two milestones were

unfolded on both sides of the Atlantic Ocean. Europe was first with the launch of the 32bit multitasking/multiwindowing

Sinclair QL. 12 days later America saw the launch of the 32bit GUI/ multiwindowing Apple Macintosh. They both entered

the field to compete with IBM's PC.

While the Mac did it in the long run and is a mainstream product in the present and future, the QL went into dust.

Before leaving the field, the QL inspired many experts and influenced today's products in one way or another. Most

prominent example is Linux, where its creator Linus Torvalds was a QL crack back in the 80s. To learn more about all

that please follow the full 25th anniversary story.
www.tinyurl.com/9ryma3

Earlier this week Apple presented their figures for the last quarter. Most Profitable Quarter Ever; Record Mac and

iPhone Sales.
http://www.apple.com/pr/library/2009/10/19results.html

Today Microsoft launched Windows 7.

Only future will tell how the desktop platform market develops in the coming years.

This and recent coverage and homage of the Sinclair QL in both media and web in the UK motivated us to organize an

international event to celebrate the 25th anniversary of both the QL and Mac. The event will be in a conference style

with sessions, exhibition and traders & workshop area. It will be hosted in the brand new Conference Center at

Verkehrhaus, Lucerne, Switzerland (Swiss Transport Museum) on Oct 31st and Nov 1st 2009.

The event is not only retro, it covers past, present and future ICT themes. There will be 8 interesting sessions on QL,

Mac, iPhone, Mac OS X, Windows 7 and AmigaOS 4.1, an exhibition and a workgroup/traders area.

The Event web-pages were updated recently.
http://tinyurl.com/ql-mac-show

Regards, Peter
P.S. We will have the 2009 BBC drama "Micro Men" on screen.

Just wondering... Bravo and Sierra are phonetics for B and S.

Why would anyone buy from BS Computers? Sure, it's Ben's initials, but
in the minds of most English speakers, it's an acronym for something
significantly less pleasant.

I've bought from them - no problems at all. Many times, they had items or software that I couldn't find anywhere else. Ben does over-post a bit, but its not that big a deal for me - its what filters or the delete button are for. :)

Hello,

Before I had to reinstall MiNT, there was a boot.log file at the
root of C:, that was updated each time the FalCT60 was rebooted.
Now, this file isn't updated anymore, and I don't know how to
have it again, despites the "boot log" option is set to "on" into
the CT60 menu.
I don't understand why is it no more active, but would like it to
be so I could fix some settings in my 1.17 config.

Thanks in advance,

J.-Luc

From: Olivier VANONI <eau-vanoni.n0sp4m@ouanadoux.fr>
Message-ID: <WS3.befc1b58.ae866a62.eau-vanoni.n0sp4m@ouanadoux.fr>
Source record: 1720

Hello All.

My SC 1425 color screen is out of order.

With the help of members of the FCSA group, I suspect
the high voltage module to be the culprit.

Unfortunately, the label is nearly unreadable. I can
see however it's a Philips component.

The indications I can read are :
On the label
T2078 (not sure)
Printed on the module
193-001
8E128

Can one of you confirm the references or tell me where
I could find the electronic schema of this screen ?

I'd like to try to repair it before looking for a replacment
screen.

Best regards.

# 4803. Jewels of Darkness on PAL STs?

Newsgroup: comp.sys.atari.st
Date: 2009-10-26 19:16:27 UTC
From: ArcadeAge <wwww.leser@googlemail.com>
Message-ID: <8f0eb067-0589-4c60-9b25-75b2f64554c4@x25g2000prf.googlegroups.com>
Source record: 1721

Hello everyone,

a while ago, I got the C64 version of Level 9's "Jewels of
Darkness" (JoD) from Ebay.
I like it a lot, but I don't like the wait times each time a picture
is drawn.
That's why I tried to get the ST version of JoD.
I downloaded Automation Disk 500_E3 from www.atari.st. It runs fine in
emulators, but when I write the image to a real diskette, the games
don't run on any of my real (German/PAL) STs. It loads to the menu
where I am asked to select which part of the trilogy I want to play,
but no matter which one I select, all I ever get to see are the ST
system's bombs of death, and then the system will return to the
desktop (GEM), or reboots. Looks like an incompatibility, doesn't it?
Looking arount for a different release, I hit upon Gamebase ST v3.1d.
Unfortunately, the version included there, though different from the
Automation release, does not work on my real STs either. (Same
problem: menu->bombs->back to GEM)
Do you who own a PAL ST get this game to work on your machine(s)? Are
the two releases mentioned NTSC releases? Is there a PAL dump
available somewhere?
Everything2.com says that these games had been released as 'The Middle-
Earth Trilogy', and 'The Colossal Trilogy' before, but everything2 is
not entirely clear as to whether these earlier releases were also ST
releases. In any case, I could not find them.
Jewels of Darkness is not the only game from www.atari.st that works
with ST emulators, but not on any of my PAL STs:
There are issues with Wings of Death (intro works, but actual game
does not start) and Super Cycle (voices of the title music are out of
sync, the game itself runs fine.)
Is that what I should have expected? Have NTSC/PAL incompatibilities
always been a big issue when the ST was popular?
Thank you for any hints or help.

Chris

P.S.: I am aware that in many of the intro screens from compilations,
there is a feature to switch the screen refresh rate between 50 Hz and
60 Hz, but in the cases mentioned, this was either not available or
did not help.

They replied? Wow! I tried for more than a year to buy MagiC for my
Milan from ASH. I never got a reply from any of the mail addresses found
on their website/shop.

Ok... question...

I personally don't have a problem with this kind of site IF the software is truly not available anymore. My question is, is it really illegal and should we really worry about complaints if the software can't be bought, the author doesn't support or update the software anymore, and obviously there's no more money being made in it?

Ok, yeah, technically it's still copyrighted, but the purpose of the copyright is to make sure money goes where money is due. If no money can possibly be exchanged anymore, what's the use of a copyright?

Finally, with software like MagiC, I think there comes a point where we no longer worry about who's making the money, and start worrying about whether or not the software is going to completely disappear. At that point, I say we spread it all over the place so that that does not happen. Or better yet, beg, plead, and grovel to the author to release it as open-source so that it can be built upon.

Just my 2c's.

Mike Freeman

Hi, that is great :) Can anyone confirm all that is necessary to get
MagiC 6/1/6/2 running is available in these files? Without me looking
into it? I'm not too advanced an user, not even ever un-zipped
anything on my AtariST, never needed to use it, though I have seen
software for in in my library. Thanks again for the link.

Server still up btw for the one peep who wants to do me the pleasure
(after all these years) ;) Can do something in return of course, just
ask please ;)

# 4810. Image of Flash card with 140 adapted games for DL - 57 MB .

Newsgroup: comp.sys.atari.st
Date: 2009-10-29 13:33:11 UTC
From: PP <pputnik@freemail.hu>
Message-ID: <b0c60abb-0d48-4eec-9bf8-fe3e5994d803@k4g2000yqb.googlegroups.com>
Source record: 1728

To make things easier for people not much experienced with hard disk drivers, settings I made collection of latest mine game hard disk adaptations together with most suitable driver/partitioning kombination for gaming on Atari machines - considering speed, easy file transfer with PCs and game kompatibility (RAM usage, Timer C etc.) .
It is autobootable on ST(E) with ACSI attached hard disks, Flash cards. Or on machines with IDE IF, Falcon too. Read supied TXT how to correct for IDE autoboot.
Is for cars marked with 1GB - size of image is 905 MB (950 millions), so must fit on every decent card. With 3 TOS/DOS compatible partitions. No need for BigDOS.

Read here more details, DL link is there, some YouTube videos too :

http://ppera.07x.net/atari/DiskImgPP1.html

Now some "rethoric" , please don't skip :

DOS partitioned drive in combination with BigDOS prg is not really good for gaming, Most of them will work, but many will fail. Mine latest adaptations with GOS4, GOS5 (where files D15R... are included) will fail for sure. That's one of the reasons for making this kompilation with more advanced driver/partitioning,
My hard disk drivers are better for gaming than others. I can say it for sure. The reasons: small RAM occupation. Easy install, no bothering with obscure settings. Special options for compatibility. Easy change of boot ( active C ) partition during booting self - what means easy change of TOS/Desktop settings, considering ACC, memory resident programs, drivers...
Then no stucking if game stops Timer C - AHDI and Hddriver will just stop in such case.
Flexible driver - may run in high RAM too.

Now some notes considering some recent shittings about my adaptations, drivers from usual assholes:
It looks that they just can not act like decent humans. What they write about Armor-Geddon is ridiculous and incorrect. Then, their knowledge is very limited, obviously...

Just few examples: the morons are proud that their included 500KB JPG and 5MB PDF with game in archive. Whatfor ? Everyone can DL cover scan at several places. PDF is from GameBaseST. Why people need to DL it again? The reason is likely: they now can say that they suplied complete artcover, 'unlike other version' with flockering fragment of . LOL !

I'm sorry that I dd not solve displaying of 900x600 pixels in 16 million colors on STE. It is possible, but depacking of JPG is little slow :-)
Their 'superb' hard disk fix missing last 10 seconds of (very good) game intro.
Explanations about why it needs 2 MB are pretty ill. But I know some things, because I spent some time solving running of complete intro on machines with ACSI/SCSI drive, and only 1MB RAM needed (not 4 as morons claim). There are videos on YouTube:
http://www.youtube.com/watch?v=rPMyR_-Jmd4&feature=player_embedded
http://www.youtube.com/watch?v=Mu21RSZB4y4&feature=player_embedded
- so people who listening on morons and is afraid from 'partition wiping' may see whole intro :-) . (Btw. how that they forgot mentioning 'wiping' in Armor-Geddon announce ? :-))) )

The morons did not miss chance to shit about my hard disk drivers. But this is only thing what they know. Do something better instead spitting on people's work, assholes !
And they of course are not aware that BigDOS is not kooperative with many games.

Sorry for boring and long explanations - truth is usually not so easy as gossip :-)

The Nordic Atari Show (NAS) will be held Nov. 20-22 in Falköping,
Sweden!

NAS is an annual get-together organized by the Swedish Atari Club
(SAK). It's a simple, improvised event; the idea is to hang out, eat
pizza, and fool around with our beloved Atari machines. The essence of
NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are
welcome as well.

For more information, visit
http://www.sak.nu/index.php?subaction=showfull&id=1256149806&archive=&start_from=&ucat=3&.

Hi Guillaume! Hmm, I'm not really sure. I know Dan did release some software for it, like the NeoDesk Commandline app, but I'm not sure about anyone else doing anything specific for it.

Almost all well written TOS/GEM software worked under it though, and it had a lot of built in options to help stubborn software run (for example, shifting it down to single tasking mode and freezing everything else).

After I get my STacy fully worked over, it's probably what I'll run on it.

They actually do have a website up, but I think its pretty old:

http://www4.pair.com/gribnif/

Thanks for both of your replies! Gemchess runs well and at lethal speed on CT60 and is quite challenging to put it mildly. I also came across Chess Champion 2175 which runs in ST Low with backward.

# 4830. SDL 1.2.14 released

François,

If I remember correctly, YAHOO! shut down GeoCities somewhere around
the end of October.

I sincerely hope that all of the stuff that people had there was not
simply... lost. There are other options out there. The BIG problem
will be people who were taken unaware and did not realize that
GeoCities was 'going away' and don't have backups of their stuff. Such
a waste... the WayBack machine will help some, but... :-(

Be well,

Joe Mirando, A-ONE Magazine

Yes it closed 10/26/09 and they gave a notice back in july, I already had the site backed up, not sure where I will put the new yet, cost is low but I need things to get back to normal with the economy first.

I had a mule page, atari 8bit and ST info page, nothing there was realy needed, just fan based

mal

You could re-create your page on a *free* site at:

http://sites.google.com/

If you want to use things like PHP and MySQL, you can get web
space *fairly* cheaply hosted on a Linux box at:

http://www.omnis.com/

They have fairly liberal policies on bandwidth per month, web site
disk usage, and such.

Was wondering if anyone has done any
new programs for the VideoMaster Cartridge,
VIDI ST, VIDI ST12, or any other atari computer
based video cartridge or board?

or any new software for converting some of these
video formats into more popular formats?

I have rewriten the software to make it run in TT Medium on an Atari TT
or in Truc Color if you have a Nova board.

You can see my peculiar interface at:
http://pagesperso-orange.fr/gtello/tt_e.htm

# 4848. zWeather

Newsgroup: comp.sys.atari.st
Date: 2009-11-22 23:46:34 UTC
From: Jim DeClercq <jimd@panix1.panix.com>
Message-ID: <hecigq$h15$1@reader1.panix.com>
Source record: 1666

Has anyone else had a problem with zWeather: For me, it stopped working when the US caught up with the rest of the world in location names.

I was 43560, which is a zip code, and that worked until it became USOH0935, which is the same in country-state-location number format. Now, neither works, and I did clear the cache.

What am I doing wrong. I have the latest program versions, and in doing that found that I already had the latest versions. zView, which shares files, is it's usual wonderful self.

Help, please.

Jim

# 4849. Atari + internet

Newsgroup: comp.sys.atari.st
Date: 2009-11-25 10:41:44 UTC
From: Piotrek <mietniow@agh.edu.pl>
Message-ID: <hej1l9$d41$1@news.agh.edu.pl>
Source record: 1667

Hi all,

I would like to connect to Atari Falcon to the internet using null modem
cable via laptop with linux.
I have read this information how configure on Patrice Mandin webpage
http://pagesperso-orange.fr/patrice.mandin/en/howto-net-ppp.html

"TCP/IP connection between Atari and Linux"

Additional informations. Because on the laptop I have not a RS232 port I
use special converter USB2RS232. I check this port and cable null modem
using on the linux this command
picocom /dev/ttyUSB0
and when I press a key I had this letter on the screen.

I try this on Kubuntu linux distribution, but I have heard that OpenSuse
is better.
The question is:
Does Somebody experience to use internet via null modem cable, or maybe
another configuration I can used ?

From Mintlist I heard that another metod is
...
there is another way of connecting via null modem cable: slattach.

Do you know what can I do ?

Thank you for all

best regards

Piotr Mietniowski

# 4850. AHCC V3.b4

Newsgroup: comp.sys.atari.st
Date: 2009-11-25 15:53:08 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <31e51$4b0d52f1$4df94c07$8425@news.chello.nl>
Source record: 1668
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

AHCC is a Pure C compatible C compiler.

There is a new version available on my homepage (see sig)

Summary of changes:

Assembler:
Fixed a memory leak;
C preprocessor activated in .S files
While doing this, it appeared that AHCC never checked
if a preprocessor command was the first of a line. :-(
This is now repaired.

.global
.org
.equ and .set second form
.ascii
.asciil
.asciiz
.page

option -*u default .super

Repair broken exg An,Dn

Allow mixed register lists of form:
Dn-An ( ascending register number) --> Dn-D7/A0-An
An-Dn (descending register number) --> An-A0/D7-Dn

Option -*w to set default size for Xn (no dot).
default (option not set) is word.
Also fixed a bug in determining the Xn size.

Compiler:
Activated and fixed option -x prepend underscore.
Fixed occasionally incorrect line number in messages.
#warning
__func__ identifier and its synonim __FUNCTION__
case: long constants allowed
Fixed stupid mistake in constant validation since v3.b3
Typos in constant folding for <= and >= (wrong way around)
Not detected until compiling emutos :-(

Negative absolute operands handled correctly.
Removed '#' from #warn, #error messages.

Less cryptic message for mismatching pointers to function.
Sometimes the Help opened the wrong file.
Fixed by restructuring the Help DataBase.

Allow 'formal' declaration of arrays by specifying
empty [] pair. e.g. static char forward[];

It appeared that if flag 'cdecl calling' was set,
functions returning a pointer returned in D0, wereas the
callee expected the pointer dtill in A0.
Probably a relic of a distant past.
Pointers are now always returned in A0.
Fixed another bug in 'cdecl' calling in combination
with __syscall__. (a2 wasnt reserved)

Incrementing a void * wasnt warned nor handled sensibly.
Arithmetic to unscalable pointers is warned and not scaled.

Fixed wrong handling of absolute Lvalues and references.
Fix and improvement of rare optimization incidence.
Fixed a bug in implicit dereferencing of callee expressions.
e.g. (a ? c : d)(arg);
Fixed a terrible regression in constant casting.
Casting int to float was lost somewhere.
Fixed a bug in long pointer scaling in 68000 mode (-2-)

Linker:
Fixed a memory bug for libraries with excessive
number of names. ( more than 1359 )
Result of a nested project was not correctly passed
and the linker was not called. Fixed.
'Linking' message gives name of project file.
Object files are linked in the order in which they
appear in the project file.

Build a ROM image:
Option -t=N N is startaddress of text+data sections.
bss start will be set at 0.
-i=N N is size of image in kilobytes. (zero padding)

Make sure ALL areas are of even size.

Shell:
KIT: button 'inherit options'
for nested projects, inherit options from parent project.

Editor:
Improvement of UNDO behaviour. UNDU after HELP.

--
Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org

A Home Cooked C compiler: AHCC; http://ahcc.atari.org

I think zWeather works by downloading an XML-file from the weather-site
and then parse it. If the format of the XML changes, zWeather will stop
working. You could download zWeather's source code and add some
debugging statements to see where it fails.

Something is missing in the doc's

Compiling AHCC with either Pure C or AHCC:
the sinclude folder must be used.
Compiling CALC and DIGGER:
the ainclude folder must be used.

You can set this via menu:Project-->Config

AHCC_PRJ.TTP defaults to ainclude.

AHCC.TTP and AHCL.TTP are there for completeness
and never used by myself.

I am not interested in Unixoids and their scripting aphasiae.

# 4857. SHUTDOWN problem

Newsgroup: comp.sys.atari.st
Date: 2009-11-29 17:41:29 UTC
From: xlator@cix.compulink.co.uk
Message-ID: <VpKdne7XisfUL4_WnZ2dnUVZ7vCdnZ2d@giganews.com>
Source record: 1675

I had to change the designation of my (Magic) XFS ramdisk from
'R' to 'W', and also changed its icon to that of a ramdisk in
Thing. After that I saved the desktop.

But now Shutdown fails, with error message -46, which means
Invalid drive specification. Obviously I need to change 'R' to 'W'
somewhere that I haven't yet, but where?

Or do I simply have to add W to the #_DIC entries of MAGX.INF?
If so, what numbers are to follow?

The present _DIC entries are as follows:
```
#_DIC 1 A 8 0
#_DIC 1 B 56 0
#_DIC 1 C 104 0
#_DIC 1 D 152 0
#_DIC 1 E 200 0
#_DIC 1 F 248 0
#_DIC 1 G 296 0
#_DIC 1 H 344 0
#_DIC 1 I 392 0
#_DIC 1 J 440 0
#_DIC 1 K 488 0
#_DIC 1 L 536 0
#_DIC 1 M 8 42
#_DIC 1 N 56 42
#_DIC 1 O 104 42
#_DIC 1 P 152 42
#_DIC 1 Q 200 42
#_DIC 1 R 248 42
#_DIC 1 S 296 42
#_DIC 1 T 344 42
#_DIC 1 U 392 42
#_DIC 5 @ 8 112
#_DIC 4 @ 8 169
```

At a guess, the new entries would be
```
#_DIC 1 V 440 42
#_DIC 1 W 488 42
```

since the present ones advance in steps of 48, but do I need to
include V as well? And what does the second number (42) represent?

Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(

The problem is from what program came the error message?

What Shutdwon prgram do you use?

> Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(

This entrys are form MagiCDesk and they save the position from the desktop
icons.

Gerhard

# 4861. ATARI'09 Christmas

Newsgroup: comp.sys.atari.st
Date: 2009-11-30 17:52:53 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4B140675.60002@atari.org>
Source record: 1679

Hi,

Because Holly Christmas is nearly approaching, and all my best wishes
are also intended to ATARIans, I embedded on my WEB site a musical
animation elaborated with POV-Ray of the 3D PacMan in a video.

<http://eureka.atari.org/walking.mov>

This animation can be displayed with Aniplayer 2.22 of course,

<http://aniplay.atari.org/>
and M_Player 3 <http://gtello.pagesperso-orange.fr/mplayerf.htm>

It requires a fast machine. I tested the video with GNU/GPL ARAnyM

<http://aranym.org/>

Thanks a lot to Didier Méquignon and Guillaume Tello for video players.

I'm maintaining *miniPack* <http://eureka.atari.org/miniPack.zip>
that runs the ATARI machine supported on any computers' host systems.

The 3D modelling of the scene was performed with CyberStudio from
Tom Hudson and also Eureka 2.12, and the rendering with Persistence
Of Vision Raytracer 3.1g that I ported on our ATARI platforms.

<http://www.povray.org/>

I wish you all an ATARI 2009 animated Merry Christmas, in advance.

Let's go for the Christmas Time now =)

>
>The problem is from what program came the error message?

Almost certainly from Magic's Shutdown program, although it could
be from my Thing desktop.

>What Shutdwon prgram do you use?
See above.

>> Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(
>
>This entrys are form MagiCDesk and they save the position from the desktop
>icons.

Thanks for that - I thought that was the case. I did try adding
entries for V and W drives as per my original posting to this, but
Thing still refuses to shut down. Same when I changed the RAMdisk
designation to 'T' in C:\GEMSYS\MAGIC\XTENSION\RAMDISK.INF (since
there was a _DIC entry for T), although it had worked when I used
'R' previously.

The reason for all this is that I was recently given a 1GB hard
drive with many partitions on it which I want to investigate.
Unfortunately when I connected it to my setup it extended my
original C to K drives by L to S, which of course clashed with
the existing R RAMdisk and partly destroyed my D directory when I
tried to access some programs on it :-(

# 4864. RE: Shutdown problems

Newsgroup: comp.sys.atari.st
Date: 2009-12-01 18:23:30 UTC
From: xlator@cix.compulink.co.uk
Message-ID: <1lSdnbc_A52_wojWnZ2dnUVZ7t2dnZ2d@giganews.com>
Source record: 1682

Thanks Gerhard for your help, which has concentrated my mind!

Further to my last posting, I have now made some checks. It turns out the refusal to shutdown message does not come from Thing, because it appears also when I disable Thing and run with MAGXDESK for a desktop. A closer look at the message reveals that it comes from the CHKFREE program, because I didn't change the drive letter in CHKFREE.INF from R to W ;-( Mea culpa!

I have now solved the problem in a different way: I've returned to using the R designation for the RAMdisk, which now shuts down correctly, and when I want to experiment with the external multi-partition drive, I'll simply disable the RAMdisk first to prevent any clashes.

I am, and I do test them from the command line, for various reasons, but I use the AHCC for editing (Qed does not like the tab chars) and overall project compiling.

AHCC_PRJ.TTP currently accepts a project file as the only parameter. If you dont mind, I will look at adding extra command line options, at least for includes and lib folders

Your testing of Teradesk lately has confirmed that I do not have libs set up properly, with command line this is much quicker to test (for me)

BTW can you post your fixes regarding the latest Teradesk test compile. At the moment I am stuck only on linking (under MiNT), having made minor adjustments to the sources, an wish to confirm those changes..

or you could use 110mb.com like I do. If you need MySQL also, I can
provide space and a db user, along with a "secure management frontend"
that you can use for writing php (or html) and uploads.

If you dont want to sign up that is..

or you could try www.000space.com (3 zeros) for similar "goodies",
without having to pay ($7) for db access. The only issue (as with most
free sites) is that your space will be blocked (from web-browsing) if

not used at least 3 times a month (3 web browser requests). I use a "pull" page to get round these issues (an hidden iframe on my main landing page - pulls 12-15 other websites)

Also FYI, Probe House Software is on one of the new 110mb servers (in canada or the states, mine is in holland)
http://phsw.110mb.com/phsw.html

I may have a backup of TOSBOX site too, I will check

cheers

Paul

I do mind. The purpose of this program is to be able to drop a
projectfile on it via the desktop. Pressing ALT while dropping
forces a make all. I am fixing a problem with the .C [-I...] option
in the project file. The project file is the place to be for
include directories.
The same is true for the lib directory. I might have neglected
this, because I only use the GEM AHCC (lib via KIT).
I am investigating this issue.

AHCL accepts all input files, including libraries on the
commandline. Files are loaded in the order of the commandline
as long as there are unresolved references and kept in memory.
AHCL's reference matching is recursive, so this order is not
vital. However the input will appear in the executable
binary in this order. To start the recursive reference cascade it
is necessary that the first file must reference something.
Most startup codes do this by refering to main.

This is how it is designed, I never ran AHCL.
It should work because AHCC uses a internal calling mechanism
that mimics the commandline.

The last time I have typed a commandline was in 1985 when
I got payed for it. And it wasn't even Unix, but ICL 2900 VME/B's SCL.

> Your testing of Teradesk lately has confirmed that I do not have libs
> set up properly, with command line this is much quicker to test (for

What exactly is the problem?

>, having
> made minor adjustments to the sources, an wish to confirm those
> changes..

about jmpa6:

```
#if __AHCC__
void __asm__ jmpa6(void)
{
addq.l #4, sp /* adjust stack; jmpa6 is called */
jmp (a6)
}
#else
void jmpa6(void) 0x4ED6;
#endif
```

A new AHCC is not ready yet.
I found two more issues, which I am investigating.
They are rare. Only occurred until now.

:-) Your involvement pays off.

It's because when you have FVDI loaded, there is a high probability you run with an external video card (Eclipse) or an emulator (Aranym), and you do not use the Videl output.

That's why I disable Xbios, and Gem video driver is made the default in this case. You still can force xbios video driver through environment variables though.

# 4876. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2009-12-05 15:45:32 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4b1a801c$0$17486$ba4acef3@news.orange.fr>
Source record: 1694
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

# 4877. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2009-12-06 08:39:15 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4B1B6DB3.6000401@atari.org>
Source record: 1695

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 120 AMD64
aranym-0.9.9.linux.ix86.rpm 286 ix86
aranym_0.9.9.linux.amd64.deb 43 AMD64
aranym_0.9.9.linux.i386.deb 87 i386
aranym-0.9.9-cygwin.zip 531 i386
aranym-0.9.9-macosx.dmg 374 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 106 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (536), Windows (531), Macintosh (374) = total 1547.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

# 4878. AHCC V3.b5

Newsgroup: comp.sys.atari.st
Date: 2009-12-08 14:28:43 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <839f6$4b1e62ad$4df94c07$20751@news.chello.nl>
Source record: 1696
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

AHCC is a Pure C compatible C compiler for GEM.

There is a new version available on my homepage (see sig)

Changes:

Shell:
Very, very usefull:
New menu entry Project->Edit ALT+P
Loads the current projectfile in the editor.
Open->Open .P* removed.

menu entry 'Find selection in project' now also in the journal.

KIT: button for option -*u (default .super in assembly)

Compiler:
Improved include file lookup.
Now Teradesk compiles directly from its own directory.
Teradesk compiles without 'inherit options'.
The need for setting a include dir in the KIT is almost
never needed when -I's are in the project file.
This is also beneficial for AHCC_PRJ.TTP. There the default
to ainclude is removed.

Made a lot of error/warning messages a lot more readable.

Completely forgot about relative long branches in the
output phase. :-( Fixed.

Fixed a regression and a closed loop while generating switch
tables. (related to allowing long 'case' constants)
It happened when a case value forms a negative short.

typechecking of call's:
p(); or p(void); /* declaration */
........
p(); /* call */
Is no longer warned. The mixing of old and new syle is silently
accepted when no arguments are involved.

Same for declarations:
p() or p(void);
followed by
p(void){...} or p(){...}

Bugfixes for rare cases involving boolean comma expressions
and pushers.

Assembler:
Fixed ordinal in "out of range" message for shifts.

Fixed a serious regression when combining C and Assembly in a file.
(message: CE: invalid asm area number)

Accept include filename between ampersands.
For the moment the warning persists and can be ignored.

Hi everyone,

my question is in the title. I cannot find what's the difference
between a 1040STF with orange disk drive LED and one with a red one...
Any ideas? And where did you find this information? What's a good
repository for such info

Thanks!

As I was playing around with my Atari the SC1224 monitor just stopped working. No smoke, no indicative smell of burn just a black screen and NO sound when loading a game which typically plays sound. I tried the Atari on a friend's machine and it works fine.

I searched online but couldn't find anything useful other than a couple of mentions that the GoldStar made SC1224s suffered from a dead thermistor (TH901). (BTW TH902, a big black plastic box next to the fuse, looks scratched up and not firm when I push it. What exactly is that thing?) I don't know if there's a way to test a thermistor to see if it's dead (can I test it like a regular resistor?) but if someone knows the value, then I can buy a replacement and test. Other than that, any hints as to the common failures of the SC1224s and if there's anything else I could check? And why isn't sound working at least?

And a note: when powering on the screen I can hear the typical CRT "tsk" noise which I believe it from static electricity around the screen or degaussing? Not 100% sure, but what I'm trying to say is that it sounds like the high voltage stuff works.

Thanks in advance for any help

But the STF floppy LED is on the keyboard, not the drive...

Are you sure that the one with an orange LED is a STF and not a STFM? I
have not seen many STF's, but all I've seen has red LEDs. I have never
seen an STFM with red LEDs.

Now, this is really 'something extremely' important :-)
Why not Googling a little. For sure there is a lot of sites
specialized about this .

My answer is: one is manufactured when orange color was 'in', and
other ... you know :-)

PP

P.S. before making any final conclusion about this, for humanity very
crucial issue try to open cases, and check are both LEDs original.

Yes. It is basically a resistor whose value changes as the temp. goes up or down. It can be used to limit the switch-on surge. As it heats up it will allow more current to flow. As a WAG, if you can detect signs of life (you might also be able to see the CRT filament glowing) then it is most likely not down to this or your mystery black box.

Hmm, maybe there's a dodgy plug on the end of the video lead, or the lead itself is faulty?

EASY !

- The RED led is the first motherboard generation with ROM under the PSU :
1986--1987
- The Orange led (and green for power) is the second generation mb with ROM
under the left of the keyboard (and a BLITTER place : socket to be soldered
!).
1987--1989

Sure if somebody exchanged the keyboard, the rule is wrong ;-)

I've been away from my Atari ST gear too long, but...

Is there *not* a way (via a converter circuit) to connect a VGA
monitor to an ST??? ISTM that it would be a sight easier to lay
hold of a VGA monitor that to find a *replacement* for the SC1224...

... that is, if the original poster is unable to fix his monitor.

Not in Mono, only in colour. VGA and ST Hi res are nearly the same.

Only certain monitors had the right sync rates in either. I forget which
(Sony I think) but one multisync could do both with a simple switchbox
built into the cable. The ST had to be turned off, the switch set, and then
the ST re-booted.

I have 4 ST's (all upgraded to 4 megs and 1 with a 16mhz accelerator), 4
monitors, 4 hard drives, and a genuine Atari CDAR sitting on the shelf that
haven't been started up for years. I really need to break some of this
stuff out one of these days.

Multisyncs could handle all Atari resolutions (well some could). Another solution is a LCD TV with VGA input. Run composite to the AV input and a VGA/ST converter into the VGA input. Then all you need is a switch on the VGA converter to disable the hi res monitor detect line. Voila, instant modern multisync. ;-)

I know how you feel, I have 2 Falcons (1 with a CT2), a TT030, MegaSTE, Ste, 6 STFM's, a 130XE, 2 800XL's, a 600XL (64k), a XEGS, a Jaguar, a Lynx and a Portfolio. And to think my Wife calls me nuts. ;-)

I do have the MegaSTE and the stock Falcon on my desk tho, just not time to use them.

That used to be the problem - only Multisyncs would work as the
Atari video was to PAL or NTSC TV standards using a 15.x kHz line
rate. Most computer monitors started at 30 kHz, so the converter
would need to be a line-doubler. However, some modern flat screen
monitors double as TV receivers, and most include frame stores
since their display is sequential rather than TV's interlace.
These may well accept the Atari's input signal, specially if they
have a SCART socket.

Regards, /Peter/

Awesome! That's what I wanted to know (I had a hunch but nothing found on Google - nice try wise-ass-PP: but you know if I'm posting on newsgroups I've already gone through Google).

As for my 1040STFs, I'm not sure if the LEDs where changed, but in one both power/floppy (yes I know the stupid LED isn't on the floppy itself - stop being pedantic folks) are red, and on the other they are green (power) and yellow/orange (orange to me anyways)

So, does it mean that one can add a blitter to a 2nd gen mobo? (of course on can, but will it work is what I really mean)

BTW, you rock Rodolphe! (CT060, etc.)

Right, so as I was saying, I want to try to figure out the problem
with my SC1224. I don't want a VGA/multisync monitor, nor a flat panel
display (for those, this would be helpful:
http://www.retrocomputing.net/parts/atari/1040STF/docs/connettore_monitor_st.htm)

For far I found these links a tiny bit helpful:
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/e49151f085ad96c8/69e
e56414b59ac29?lnk=gst&q=dead+sc1224#69ee56414b59ac29
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/5080d4f737d22c20/a5a
eda733c7d302b?lnk=gst&q=rex+hebert#a5aeda733c7d302b

Unfortunately it's hard to understand people on the net these days,
because they stopped using grammar rules and writing properly (just
contrast the usenet postings above with the brain numbing "rivers of
words" below:
http://www.atari-forum.com/viewtopic.php?f=15&t=2117&hilit=black+screen
http://www.atari-forum.com/viewtopic.php?f=15&t=10579&p=84525&hilit=goldstar#p84525

Anyways, from the little bit that I "got", and from reading the
venerable electronics repair FAQs:
http://www.repairfaq.org/sam/tvfaq.htm
http://www.repairfaq.org/sam/monfaq.htm

I realized that there's no high voltage. There's a squeal when the
screen turns on, but it seems to be coming from the PSU. The filaments
don't light up and the voltages on the back of the tube are in the 50v
range instead of the 100+v range (I tested with a working SC1224).
Furthermore, I replaced the PSUs and the dead one wasn't Lazarus... So
it seems the problem is not in the PSU (and thus the infamous
thermistor - which I tested with a hair-dryer and cold-spray and it
seems to work, although the range was a bit "off" from the working
SC1224's TH901 thermistor). From partial decoding of the cryptic texts
in the atari-forum I'm thinking that maybe it is the LOPT/flyback, but
I'm not entirely convinced. I guess I have to measure more things to
come to a better conclusion. If anyone can give some pointers here,
they'll be appreciated.

Thanks

Been there, done that. The problem is that the frequency-setting capacitor
is on the top of the board, next to a heat sink, where it bakes. And when
it does it kills the flyback.

When you replace both those things, put the cap on long leads, to the
bottom of the board, and toss it up front under the monitor face.

The flyback and cap should be able to get from BEST Electronics. That is
from fixing a 124, not a 1224. Anyway, if you get a new flyback
transformer, get the flyback capacitor, too. Check e-bay. Last I looked a
1224 was selling for 40 dollars.

Adding a blitter might be possible on any ST, but there's no space reserved for one on the STf/STfm mainoards AFAIK - if you want one, my advice would be to get a Mega ST or (Mega) STE. The changed LEDs were due to dropping LED prices - red LEDs were significantly cheaper in 1985 to 1986 or 1987, afterwards other colours were available at similar prices and green and yellow simply looked more modern than the (then) all-too-common red ones.

And BTW, the blitter isn't used by too many programs anyway, and if you want to speed up GEM: replacing the VDI with the RAM-based NVDI is much easier and has a much greater effect (NVDI 3 is sold very cheaply on hood.de and occasionally on eBay and even comes with TrueType and Speedo font support).

If you didn't get, my 'advise' for Googling was pure sarcasm :-)
Sad that such stupid threads like this pull most attention here.

Hi Jim,

thanks for the helpful reply.

On Dec 17, 5:06 pm, Jim DeClercq <j...@panix3.panix.com> wrote:
> Been there, done that. The problem is that the frequency-setting capacitor
> is on the top of the board, next to a heat sink, where it bakes. And when
> it does it kills the flyback.

Dl you mean the capacitor that's at the top-left of the motherboard
(looking top-down), that's inside the flyback's protective shielding
(doesn't look much like a heatsink, not at the top-left corner
anyways). Or do you mean the big ol' capacitor that's directly to the
south of the flyback and indeed close to the heatsink that's got the
HOT attached to it?

And just to make sure, we're talking about the electrolytics here,
right? Because I also see some ceramic ones in the vicinity.

What I just don't understand is why I get no sound out of the
monitor... I mean, the Atari is indeed producing sound (I tested
this), and I also tested the voltages that come out of the main PSU
and go into the sound circuit. It puts out almost 18v. Then the next
leads over to the left are putting out 16v. (not sure what the nominal
voltages ought to be - according to the post below he's expecting them
to be 24v and 12v) Finally the left-most that feed the HV circuits
start at 117v when the HV is disconnected, but get pulled down to ~55v
when the HV circuits are connected. This is very similar to what these
other posters found out:
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/5080d4f737d22c20/a5a
eda733c7d302b?lnk=gst&q=rex+hebert#a5aeda733c7d302b
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/c67bdbcb5d718227/32b
29709ff03f7e6?lnk=gst&q=sc1224+voltage#32b29709ff03f7e6

But neither of them says what the real problem was... So it seems it's
something common enough, if they're getting similar behavior.

Lastly, there's a buzz coming out of the PSU when the HV circuits
aren't connected. It almost goes away when the HV is connected to the
PSU.

(With the b6) There still seems to be an issue with AHCC finding files, it is a case thing

I am using AHCC from FAT drive C: (supports: upper case only)

The TeraDesk folder is on a MINIX partition E: (supports: upper case and lower case and mixed case)

When the file names are all upper case as from the zip, AHCC cannot find the Project files listed at the bottom of the DESKTOP.PRJ file, when these are rem'd out, it cannot find the .C files.

When it says the files it cannot find, it always prints them in lower case.

When all file names are lower case (in the file system), the files are found (ARAnyM hostfs: lower case)

Compiling "btst.s" causes a crash, XaAES outputs:
pid 66 (AHCC): BUS ERROR:
User PC=163C856, Address: 0
(basepage=160E000, text=160E100, data=16519E8, bss=1663BB2)

The test system is EasyMiNT 1.70 for ARAnyM (ZIP from EasyMiNT page, uses MiNT 1.16.3)

I will try the same AHCC and source tree using standard AFROS setup (confirmed, same problems)

Paul

# 4911. Re: My SC1224 just died :-( Help!

If you want to get it fixed, I would try either B&C Computers or
Best Electronics. I think it would be cheaper just to buy a new.
I have seen plenty on the Web for sale, so as cheap as $30...

There you are.

All filenames, both in project file and #include in the source
are lower case. Works on TOSFS.
Works also on case sensitive or case preserving file systems
but only of course if all relevant filenames in the fs are lower case.
Mixed case makes things unpredictable.

I use a ZIP drive for transfering AHCC et al to my Linux box
to a case sensitive fs.
I can configure mount to treat all filenames on the ZIP as
lower case. So that is what I do.

I will try using the TOS drive again. I do know that case is an issue
when using MONST, but that it does work with a MINIX partition. (maybe
that is just a long filename issue)

I will try a test with the lower case file names on the MINIX, and the
EXT2, but from what you say, they will work..

so your telecoms program says you have type a character.

In this instance what you could do is run a BBS type software on the
Falcon so you can see if you are connecting.

Alternately (same as null modem on DOS/WIN) run a telecoms program on
the Falcon (and picocom on linux), if it displays the key you typed on
the opposite machine, then you are in business

> I try this on Kubuntu linux distribution, but I have heard that OpenSuse
> is better.
this is irrelavent, because it must work at console/terminal level
first.

> The question is:

the slattach tool."
http://www.faqs.org/docs/linux_network/x-087-2-slip.operation.html
http://linux.about.com/library/cmd/blcmdl8_slattach.htm

This is a replacement for Patrices PPPD method, and not useful if you
cant get the serial port on the usb working

> Do you know what can I do ?
>
> Thank you for all
>

>
> Piotr Mietniowski

what both these options presume is that you have a working RS-232
interface on the linux side. The easiest way to do that is to connect
to a modem. When you can do basic modem requests (ATI0: capital a-tee-
eye-zero)

At the end of the day, you need to make sure that BOTH sides your null
modem are setup the same (the RS-232 parts) otherwise no reliable
communication will happen, this is easily done with telecoms program
on each end.

The setting should be something like 8, none, 1
7 or 8 - number of bits used to transmit data
none - parity bits, only useful on modems
1 - number of stop bits

The other important setting is speed, Patrice go it working at 115200

once that is working, then follow the instructions on Patrice Mandin's
webpage

You might want to check out the types of null modem cable also:
http://www.lammertbies.nl/comm/info/RS-232_null_modem.html

for getting the setting right, try some of the following
windows: http://www.lookrs232.com/help/commport_settings.htm
linux: http://www.ibiblio.org/pub/Linux/docs/HOWTO/other-formats/html_single/Serial-HOWTO.
html#set_serial

your linux side should be done with:
# pppd -detach crtscts lock noauth local 192.168.0.1:192.168.0.2 /dev/
ttyUSB0 115200 &

From what I can tell, this should be enough to get things working
(pppd must have its own 8,none,1 settings), but you should read ythe
following concerning your convertor:
http://www.mjmwired.net/kernel/Documentation/usb/usb-serial.txt

"Virtual COM port (VCP) drivers cause the USB device to appear as an
additional COM port available to the PC." (has linux drivers)
http://www.serialgear.com/USB-PRODUCT-DETAILS.cfm?sku=USBG-232&catid=461&cats=461

Hope that helps a bit, setting up RS-232 is not a common thing
anymore, experience getting a USB one working is even less common, but
the above should help as long as you can get the devices set up
properly. The virtual com port will probably be named different from
the USB port, it one is used on linux. Read "usb-serial.txt" to find
specific drivers..

Paul

# 4917. TeraDesk 4.02 is available

Newsgroup: comp.sys.atari.st
Date: 2009-12-25 23:12:32 UTC
From: vdjole@EUnet.rs
Message-ID: <hh3gsv$fng$1@news.eunet.yu>
Source record: 1535

Version 4.02 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.rs/~vdjole/teradesk.htm

This release fixes undesired behaviour that was observed when a mouse button was held pressed for a long time. Also, a couple of small optimizations were done and some adjusments were made to make TeraDesk compile correctly in AHCC.

Have fun.

Djordje

Talking to myself again. Top posting too. Google Weather Underground, or
wunderground, and they have a XML feed based on zip code. Should I ever
find time to work on this, it seems a better source. And, you can see what
is there. CAB works for this.

# 4919. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2009-12-26 14:40:07 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4B362047.7050502@atari.org>
Source record: 1537

Hi,

ARAnyM 0.9.9 <http://aranym.org/> runs the ATARI machine
supported on any computers' host systems. The *miniPack* a
minimal distribution <http://eureka.atari.org/miniPack.zip>
was updated according to TeraDesk v4.02 release. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

## 4920. Bob's Calltime

Newsgroup: comp.sys.atari.st
Date: 2009-12-26 22:38:50 UTC
From: Jim DeClercq <jimd@panix2.panix.com>
Message-ID: <hh639q$gcb$1@reader1.panix.com>
Source record: 1538

If anyone is using Bob Areddy's program to set system time on an Atari,
the Washington DC number is dead, and what is left is Colorado and Hawaii.

I changed both possible files to 1-303-494-4774, all run together into one
number, and it works. That is Colorado. Hawaii is 1-808-335-4721.

Has anyone seen Bob lately? Long ago, he worked at Tower Computer on 14
mile in Warren, MI.

Nice work Djordje :-)

A question about changing resolution on some poor ST(E) : it seems
that only way is via editing XaAES.inf file and reset. Teradesk
Video settings fixes 16 colors for med. res. and can not set to 4.
Is it because must so, or is not implemented, perhaps bug ?

PP

I do have 4 original Atari's (TT030, ST1040, 2xMega4) somewhere on my
house but I don't have the place on my computer room to install then.

I still have my dead Hades too. I'm almost sure it can be repaired only I
don't know a person who can repair it for me for a reasonable price.

TTFN,
Martin

Hi,
TeraDesk 4.02 works great on my Falcon/CT60 at 100 MHz with MinT 1.16/
XaAES and Magic, too.

Happy new year,
Latz

Oh ok - nice to know you've still got some Atari's - you need to get rid
of some less important things to make room, you know, like the wife, kids,
dog, cat, whatever... :D

Just kidding!

Hmm, there should be someone who can do this.

# 4938. The Atari Music Network is Live!

Newsgroup: comp.sys.atari.st
Date: 2010-01-02 16:13:50 UTC
From: Donovan <donovan.kokot@gmail.com>
Message-ID: <05051d12-bdbc-455e-bc72-3c9885c55de3@j5g2000yqm.googlegroups.com>
Source record: 1606

(WEBSITE) http://www.atarimusic.net
(FORUM) http://www.atarimusic.net/atari-music-network

From sequencing Tangerine Dream concerts in the 80's to tearing up the dance floor at the New York Blip Fest in 2010, Atari's reputation as a music monster machine has persisted for a quarter of a century. The secret behind its success is clear: Atari was perfect from the beginning – it didn't need to change. For MIDI enthusiasts, the Atari was and still is the ultimate bridge between man, music, and machine. For chiptunists, the Atari offers a canvas of unexplored sonic colors for electronica and 8-bit pop. AMN believes that Atari isn't just about nostalgia; its about utilizing an alternative computer platform for specialized digital music creation.

On Jan 1, 2010, The Atari Music Network (AMN) was launched, marking the beginning of an exciting new era for Atari based musicians and developers by offering news, resources, and an extensive social network area.

The Atari Music Network (AMN) Mission Statement and Features

The Atari Music Network (AMN) aims to:

• Stimulate social interaction of Atari based musicians and developers as one global community.
• Inspire and support Atari hardware and software developers to update and resell their products or place abandonware into the public domain.
• Deliver relevant news, product information, downloads, and hardware support
• Provide free marketing for Atari based musicians, albums, and events
• Bolster Atari's presence in the 8-bit pop scene
• Archive, catalog, and preserve Atari music software for future Atari generations
• Encourage the pirating and cracking of ex-commercial software (ethical rules apply)

AMN Currently Features

• Discussion Forums: The Heart of the Atari Music Community
• Worldwide Ebay Power-Searches: Dozens of Predefined Atari Hardware and Software Searches
• Facebook Group: Connecting AMN to a Wider Audience
• Featured News & Articles: Showcasing Atari Musicians, Developers, and Events
• Frankenstein Mods: How-to Guides of user's Hardware Hacks and Mods
• Hardware Catalog: An Archive of Music Related Atari Peripherals

• Software Catalog: Music Software Downloads Including Freeware and Cracked Abandonware

AMN Future Features (To be Announced)

• Atari E-Store : A Centralized, Secure, and SEO Enhanced E-commerce site to help developers reach a wider target audience
• Artist's Self Promotion: Dedicated Profile Pages for Artist's to Create Sample Albums and Promotional Materials

You can also join the Atari Music Network Facebook Group here: http://www.facebook.com/home.php?filter ... 5513878661

So I'm sitting here googling myself and find a post re: my CallTime
program I wrote, probably in the early 90's, maybe even late 80's,
IIRC.

I can't believe someone is still using it!

BTW, I never worked at Tower Computer. Worked at a Radio Shack at 12
& Woodward in the late 80's.

Also, if you want to send an e-mail, add 2 to the year of this e-mail
address.

Thanx, and Happy New Year to everyone .
Even if own not some Atari & clone , just one of that 2. Just
kidding :-)

I hope that will be good. And even working in that direction - new
driver for UltraSatan is almost finished.
Need to finish some supporting utils too. Will post here when is
ready for public.

From: Kroll <mietniow@gmail.com>
Message-ID: <754af72c-b0a8-42f0-b080-5843b2e5810c@34g2000yqp.googlegroups.com>
Source record: 1610

I woudl like to install teradesk 4.02 in single TOS. In clean TOS
system on the Install aplication in menu the file desktop.prg in
Teradesk directory I choose Install application and AUTO in boot
status. Nextly I save desktop and changed newdesk.inf into
teradesk.inf (because this file I have in Xboot before start the
computer. But I dont know why after restar this option is not save.
and again launch computer, teradesk is not loaded again check and only
NORMAL in boot status. Does anybody know why ?
Maybe it is another way to install teradesk in SIngleTOS. I have try
it with CT60 and F030 mode ?

Best regards

Piotr Mietniowski

That is correct

> Nextly I save desktop

That is also correct.

> and changed newdesk.inf into
> teradesk.inf

That is wrong. Newdesk.inf is different from Teradesk.inf

Via newdesk.inf the ROM TOS starts Teradesk.
Teradesk saves its config in its own Teradesk.inf
So you must keep both.

> (because this file I have in Xboot before start the
> computer. But I dont know why after restar this option is not save.
> and again launch computer, teradesk is not loaded again check and only
> NORMAL in boot status. Does anybody know why ?

Because TOS still needs newdesk.inf to know it must load
Teradesk.

> Maybe it is another way to install teradesk in SIngleTOS. I have try
> it with CT60 and F030 mode ?

No special mode needed.
I use Teradesk this way on my 520ST with TOS 1.4

I changed this name from newdesk.inf to teradesk.inf only for Xboot,
because there are a few setup before start the system. This is not a
teradesk.inf from Teradesk directory.

>
>> (because this file I have in Xboot before start the

The problem is because I dont know why in newdesk.inf after the run
cumputer i SingleTos teradesk is not start. In newdesk.inf is path to
teradest (exactly desktop.prg) but not saved AUTO status in TOS Install
aplication still is only Normal in boot status

Check that XBoot is actually using teradesk.inf in the selected set. And
try without XBoot:

- Boot into TOS.
- Disable XBoot.
- Set desktos.prg to autostart and save settings.
- Reboot.

What happens?

Source record: 1616
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

There is a new version available on my home page (see sig)

New:

General:
Changed the naming scheme of all the incarnations of AHCC.
The name of the project file is always the same as the
name of the executable. See 'distribution' in the hypertext.

Shell:
Close the project file. (problems saving after ALT+P)
Fixed a memory leak when compiling from a open window.

Compiler:
Create AHCCST.
A 68000 version without floating point support.

The header cache is always freed between make's.
It must also be freed between files when caching
is switched off.

Cached headers take about 30% less space due to
redesign of tokenized input format.

Another dereference of a zero pointer.

Library:
Fixes in stricmp, strnicmp & strtol.
Consistency check in AHCM (memory allocator).

OK, I have done Disable Xboot and only loaded clean TOS when
desktop.prg was install in boot status as AUTO and now work fine, but
when back to start with active xboot is bad again. And I dont know why
i dont work with XBOOT maybe I have bad version of Xboot ?

Do you know why withot xboot is OK?

It's OK without XBoot because the built-in desktop is doing what it's
supposed to do. XBoot is not copying teradesk.inf to newdesk.inf. Why I
don't know.

I think this should work, but it requires a special setting in Teradesk
(a certain background colour or pattern I think). Check the manual.

Thanks a lot, It works with DESKPIC in SingleTOS mode too, background
must set on white colour.

best regards
Piotrek

# 4957. ST/STE/Falcon Badges

Newsgroup: comp.sys.atari.st

Anyone know a source for ST/STE/Falcon Badges or labels?

Could use a few of these, doesn't matter if the name on them is damaged.

By badges, I mean the plastic label on the top part of case which has the computer model and name on it.

If you just have one to spare or 10. E-mail me or post. would like to work out something for them. Need for a project.

Hey Phantomm! You could try the usual places like Best Electronics or B&C Computervisions.

Hope you and yours had some great holidays!

Later bro! :)

No, don't think they would have 'em without the name on them.
I need blank ones, Guess I'll just have to make those myself.
Shouldn't be hard to do.

Well we did have some Magic time when the power went out and after
things calmed down.

Got some nice pics of fallen trees, luckly none fell on us.
Had a nice night display of transformers lighting up the sky, so I
wasn't out anything on fire works.

It was a christmas that I'll never forget.

Oh, my bad - didn't realize you needed totally blank ones.

> Well we did have some Magic time when the power went out and after

Heh, yeah we had 3 days without power.

> Got some nice pics of fallen trees, luckly none fell on us.
> Had a nice night display of transformers lighting up the sky, so I

Well, it wasn't that bad here, but some people didn't have power all
through Christmas.

Hmm, do they still fill those things with oil (transformers)? I know they
used to - its why they would light up so good and even explode.

Well if you like electricity, then it was bad here. We didn't have any
electricity for around a week.
I had backup oil heaters, candles, and 2 fire places in the old place just
in case things didn't get better
with the electricity. I generally prepare for the worst. We spent our time
listening to the radio, writing,
reading books, and drawing by candle light.
I'm getting a good home generator asap. Been meaning to get one, I have one
for the wagon.
but our winters have been rather mild over the last dozen years or so. I've
not seen so much excitement over snow
since I was a young boy. Back then we prayed for such days, no school, and
riding sleds, life was much simpler
in those days.

We were warm, together, and safe. And the candles were nice too!

It wasn't at all fun. When you have someone who doesn't understand that
electricity isn't a given
part of life. Then it's pure hexx trying to explain it to them. So it was
95% hexx, but when the 5%
of fun came, it was magic! And here we all learned something during this
experience.
Not sure if it was worth all the hexx we with thru however.

# 4965. Atari computers and Music/Midi

Newsgroup: comp.sys.atari.st
Date: 2010-01-10 05:13:49 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4b496216$0$5317$bbae4d71@news.suddenlink.net>
Source record: 1633

Anyone still using an Atari based stuff for Music stuff these days?

Web sites, links please if you know of any...
of just let me know what if anything is going on...

Also, any real Atari users from the old days still going?

I know most of us have modified our own equipment,
just curious if there is still a demand for Atari based software,
hardware, music and the like?

I never left but it seems that everyone else did.

## 4966. Parts wanted

Not sure, but think I posted this before, but in case you missed it,
ExtenDOS Pro and the CDWriter Suite from Roger Burrows at Anodyne Software
is pretty awesome. It works fine on my Yamaha burner on my Mega ST for
backing up my BBS stuff to CD. Its also great on my Liteon DVD burner on
my Falcon - yes, you can burn DVDs on your Falcon. Does audio CD's on
both as well. There is a list of supported software on the website.

http://www.anodynesoftware.com/

It is commercial though. Or were you talking about free software?

Shouldn't be too much, I've had monitors shipped to me before.
I need one or two that works, if you are in USA, I'll pay shipping charges
as long
as they work. Box one up and next time you go to the post office, get
someone to
check out the postage to MouthCard KY. 41548

Contact me at my e-mail address.. phantomm@suddenlink.net OR
phantomm@bellsouth.net

thanks,

I have that software, bought it new, haven't upgraded to the latest version
though.

Was wondering if there was anything else available besides ExtenDos/CD
Writer?

Spin? Not sure about it really does though..

Maybe someone with experience with it can jump in here? Thanks!

From: Dennis Schulmeister <usenet@windows3.de>
Message-ID: <hin5oi$9f7$1@online.de>
Source record: 1553

Hi,

phantomm_1 wrote:
> Anyone still using an Atari based stuff for Music stuff these days?

Sorry, no website but me, too. :) Though I'm not frequently writing to
the list I'm constantly reading it and do post sometimes at atari-home.de

Actually I'm using Cubase on Falcon for several years now and got it
synced to several audio workstations in the meantime. Back in the days I
used to use a Windows DAW called n-track. Later came Ardour on Linux and
now I have it hooked up with a AW4416 which is a digital mixer with
built-in audio recorder. MTC/MMC works wonders and it's great to have
Cubase play the synthesizers in sync to the audio recordings.

> Also, any real Atari users from the old days still going?

IIRC I started with ATARI sometime around 1992 and am still using it. So
I would consider myself to be from the old days. :)

> I know most of us have modified our own equipment,
> just curious if there is still a demand for Atari based software,
> hardware, music and the like?

Of course there is.

With kind regards,
Dennis Schulmeister

I have been around since the beginning and am still using
an Atari (much to the displeasure of my wife). Right now
I am just using a small Falcon030, but am waiting for the
CTPCI upgrade before I start putting together an upgraded
Falcon system. I am also getting the Coldfire computer. As
far as Midi is concerned, I do not do too much. I probably
when my new systems are up and running. I do have an old
Roldand MT-32 MIDI module which still works great. I have
Cub, Cub lite and Sweet-16 (which is still supported I think).

Cool...

I've heard of the ColdFire Project, I wouldn't mind getting one,
but need to find out more about it first.
I'm glad that projects like this are still going on.
I just dont want to spend my hard earned money on another board,
only to find out, that 6 months later, I'll have to buy another one to
have the bug free one.

Where Can I place a order for one?

# 4992. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-01-16 21:33:04 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4B523090.9040209@atari.org>
Source record: 1560

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 186 AMD64
aranym-0.9.9.linux.ix86.rpm 364 ix86
aranym_0.9.9.linux.amd64.deb 64 AMD64
aranym_0.9.9.linux.i386.deb 139 i386
aranym-0.9.9-cygwin.zip 530 i386
aranym-0.9.9-macosx.dmg 887 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 166 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (753), Windows (530), Macintosh (887) = total 2336.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Ben,

If you insist on sticking with ICD Pro then you are stuck with its
limitations. As an IT Pro I see so many tender documents which specify a
particular version of software and then ask for work arounds for its
limitations. WHY CHOOSE IT IF IT DOES NOT DO WHAT YOU WANT!
I have a pile of Seagate SCSI drives that will only format on my TT-030 with
HDDRIVER. The time its saved me has more than covered the cost of purchase.
So whilst it doesn't get round all problems it does allow me to use a load
of drives that I can't get working with any other program. Its actively
supported so if you do have a problem you can e-mail the author (unlike
hi-wire!) and get a response.

Dave

I'm Happy with it's limitations, I just need to know which drives I can use
with the ICD Pro? What determines that? Is it capacity?

> As an IT Pro I see so many tender documents which specify a
> particular version of software and then ask for work arounds for its

It does do what I want! I need to know which Drives I can use with it! What
parameters? Is their a maximum capacity?

> I have a pile of Seagate SCSI drives that will only format on my TT-030 with
> HDDRIVER. The time its saved me has more than covered the cost of purchase.

I have HDDRIVER and I will not use it! I like ICD Pro!

Any SCSI-drive where parity can be disabled by a jumper. Size doesn't
matter, but there might be some limitation the SCSI-adapter. It's quite
likely that you can't access sectors beyond 1Gb with these adapters.

It is not clear what adapters can access over 1GB on ICD site:
http://www.icd.com/atari/index.html#adscsiplus
You need to google little around to get proper answer.
TOS 1.02 has limits: 256MB max partition size and max 14 partitions.
So, it is 7GB, What is more than enough for all SW you can imagine...
Too much capacity ? It will not prevent any adapter to access first
1GB on drive.

So, answer is: there is no maximum capacity in fact (limits are far
beyond than current manufactured consum drives, not to mention older
ones, what are only interesting).
You may have only maximum accessible size on disks, what is usually
1GB with Atari ST ACSI/SCSI adapters.
In any case, you may try, and will see .... (if can not find what ICD
model can accessing over 1GB) .

Another option is (only if can over 1GB) to use DOS partitioning -
then may have partitions of max. 2GB. However, it is not recommended -
you need program BigDOS then, what is not compatible with all Atari
SW, and I remember that there were some problems with it on TOS 1.02 ,
while under 1.04 and 2.06 worked good.
Really don't see the point with so large partitions when SW needs not
so much space.
Only maybe recommended if want to attach same disk sometimes on PC,
for data transfer. But even then, there are some better drivers, which
have TOS/DOS compatible partitions.

PP

# 5003. Beginning planning for Atari Party 2010 (Davis, Calif.)

Newsgroup: comp.sys.atari.st
Date: 2010-01-25 08:45:13 UTC
From: bill@newbreedsoftware.com
Message-ID: <4b5d5a19$0$1648$742ec2ed@news.sonic.net>
Source record: 1571
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.atari,alt.atari-jaguar.discussion,alt.games.lynx

Hi all!

Last March I organized an event in Davis, Calif. that I called "Atari Party."
We had over a dozen Atari systems, spanning Atari 2600 through Jaguar, and
over 200 games for the public to come and play:

http://www.newbreedsoftware.com/atariparty/2009/

I haven't picked a date (or venue -- the public library in town, where
we met last year, is undergoing renovation thru mid-2010), but I've
started planning.

This year I'm thinking of bringing my Sony PlayStation 2, along with
a variety of PSX and PS2 discs I've got that contain Atari games
(e.g., "Activisiton Anthology", "Midway's ... Atari Collection 1")

Would anyone out here be interested in bringing systems & games
this year?

I've personally got 10 systems (including 2 non-Atari devices for
which I've got emulated Atari games: the PS2 and Gameboy Advance),
and 2-3 too few monitors/TVs to display them on. ;)

I've also got about 390 games (about 50 of which are dups; e.g, I have
a Combat cartridge, and my Flashback 2 has Combat).

Sorry if I'm incoherent, it's late and I'm distracted by a movie. ;)

# 5004. Hard disk and cmpact flash with HDDrover

Newsgroup: comp.sys.atari.st
Date: 2010-01-25 14:54:42 UTC
From: Piotrek <mietniow@agh.edu.pl>
Message-ID: <hjkbbj$lv$1@news.agh.edu.pl>
Source record: 1572

Dear All,

I have question with configuration of Hard Disk and Compact Flash card
using HDDriver on Atari falcon.
My friend have very old Hard disk Quantum GLS127A (2.5 inch).
Information about this disk I found on web page

http://stason.org/TULARC/pc/hard-drives-hdd/quantum/GODRIVE-GLS-127-AT-127MB-2-5-SSL-IDE-AT.html

But still I have a problem is it posibility to change between master and
slave.

When a connect this drive and Compact Flash Card (Kingstom 4 GB)
(connect to IDE port via special converter using 2,5 inch cable, the
HDDriver show only the disk, but I connected only the Card HDDriver
showed when boot the system.

ELITE PRO CF CARD 4 GB ver 2 Direct Access

The problem is because I have not posibility to save it, HDDriver
Install in Hddrutil.app is not active.

Does somebofy know hwat can I do with this ?
Maybe with other disk drive ?

Best regards
Piotrek

Not exactly clear what you try to say...

Usually on CF card adapters is jumper for selecting will it be master
or slave.
But you need to try that Kingston first alone, as master. It will
likely work not good with Falcon - according to my experiences.
Especially writing (save) is troublesome. Maybe it is the reason why
you can not do proper install.
Much better choice is some Sandisk CF card.

In any case, you need first to partition card, update config and only
then you may install driver.
What Hddriver vers. you have ?

Source record: 1575

I noticed that compressed kernel image takes ~400 kb, and wondered
whether it is possible to unpack and run it with mentioned amounts of
ram.
Also, I am not sure, whether Atari STe has described hardware:
from http://www.debian.org/releases/2.1/m68k/install.txt
---
The m68k port of Linux runs on any 680x0 with a PMMU (Paged Memory
Management Unit) and a FPU (floating-point unit). This includes
the
68020 with an external 68851 PMMU, the 68030, and better, and
excludes
the ``EC'' line of 680x0 processors. See the Linux/m68k FAQ
(http://www.linux-m68k.org/faq/faq.html) for complete details.

There are four major flavors of supported _m68k_ flavors: Amiga,
Atari, Macintosh and VME machines. Amiga and Atari were the first
two
systems to which Linux was ported; in keeping, they are also the
two
most well-supported Debian ports.
---
also
---
2.3. Memory and Disk Space Requirements
---------------------------------------

You must have at least 5MB of memory and 35MB of hard disk. If
you
want to install a reasonable amount of software, including the X
Window System, and some development programs and libraries,
you'll
need at least 300MB
---

So, 5mb of ram is necessary.

Does Atari support old PC style simm memory? In case I can find some.
Is it possible to buy memory for ste online?
Is motorola 68000 in atari ste equipped with ppmu/fpu?

Thank you

This from a TT030 running a generic CF card as a hard drive. This part
works. I would suggest trying the 2.5 inch drive separately, first. If
there is some other problem with the 2.5 inch drive, try ICD Pro Tools,
which does not, I am told, use the complete command set, and may work. It
is compatible with the much better HDDriver.

When you have that working (there should be jumpers on the drive, to be
done at the other end of its cable) then, by my experience, using a SCSI
bridge card and a CF card adapter, any brand should work. But you need
to partition it, before any driver will install.

Jim

Why to Hell using SCSI bridge on Falcon, which has own IDE port ?
Not to mention that IDE is 2x faster than SCSI on Falcon - I can get
over 3MB/sec with Sandisk CF card, while SCSI may max some 1.5 MB/sec.

And btw. I have bad expereiences with SCSI/IDE adapters. Yamaha for
instance works only with normal hard disks, but none of CF cards
worked reliable with.

Finally, as I know, ICD supports not IDE drives, only SCSI and ACSI
connected ones.

FYI - Plans for Atari Party 2010 move ahead!

(1) We'll be screening a movie (if not two!).
So far, the documentary "Once Upon Atari".

http://www.newbreedsoftware.com/atariparty/2010/movies/

(2) We'll be having a raffle, with some prizes donated to the event
by corporate sponsors:
* O'Reilly Media (gaming & retrogaming books)
* ThinkGeek ($100 gift certificates)
* Legacy Engineering (some USB Atari CX-40-style joysticks)

http://www.newbreedsoftware.com/atariparty/2010/sponsors/

(3) I whipped together a cute (I think!) piece of flyer artwork
for this year's party, using a collage of photos from last year
(in the late-1970s Atari 2600 game box art style):

# 5017. [ACP] Computer name conquest

Newsgroup: comp.sys.atari.st
Date: 2010-01-30 00:06:18 UTC
From: Vincent Rivière <vincent.riviere@freesbee.fr>
Message-ID: <4b637803$0$6264$426a34cc@news.free.fr>
Source record: 1585

Hello.

Everyone may not know, there is currently a conquest to find a name for the
future ACP computer. All the details are here:
http://acp.atari.org/

Feel free to send your propositions to:
acpinfo (at) atari (dot) org

Answer quickly, the conquest will end next sunday !

Hi,

The ATARI.ORG servers were transfered to Apache 2, with temporary
miss-redirections that are rapidly fixed up. All's now working good.

Many thanks for the really good service.

Best regards,

# 5019. Eiffel and Joystick

Newsgroup: comp.sys.atari.st
Date: 2010-02-01 11:48:12 UTC
From: Piotrek <mietniow@agh.edu.pl>
Message-ID: <hk6f1p$2ca$1@news.agh.edu.pl>
Source record: 1587

Dear All,

I have one simple question about cooperation between eiffel and
joystick. I have just observed that plug joystick to eiffel and the
button fire not work with some games. For example this game is GODS.
When plug joystick directly to falcon, then everything is OK.

Is this OK ?

Best regards
Piotr Mietniowski

I had this problem as well. I think its a bug in some versions of the
Eiffel code. If any one else has a solution I would love to know it...

Dave.

## 5022. [ANN]zWeather 1.2

Newsgroup: comp.sys.atari.st
Date: 2010-02-02 00:55:23 UTC
From: Zorro <zorro271-1@yahoo.fr>
Message-ID: <4b6777fb$0$21306$426a34cc@news.free.fr>
Source record: 1590

Thanks to MiKRO, zWeather 1.2 is available.

No new features but a couple of bugs have been fixed and, the most
important, now zWeather should get again the datas from weather.com.

Yes

> but it bounced.

Ups.

> "DNS for host b.maus.de is mis-configured."

I ask my Sysop, thanks for the hint.

We can move the group "comp.sys.atari.programmer" if you want.

Something more about AHCC

Can you describe me why I get this error, when I use the header EXT.H?
```
--------------------------------cut-------------------------------
Error in I:\AHCC\INCLUDE\EXT.H L47 bad type modifier to T_ULONG for : ';'
Error in I:\AHCC\INCLUDE\EXT.H L0 no declarator for : 'unsigned long'
--------------------------------cut-------------------------------
```

Line 47 is:
```
--------------------------------cut-------------------------------
typedef unsigned long size_t;
--------------------------------cut-------------------------------
```

When I replace that line with:
```
--------------------------------cut-------------------------------
#if !defined( __STDDEF )
#include "stddef.h"
#endif
--------------------------------cut-------------------------------
```
it works. But in the I:\AHCC\INCLUDE\STDDEF.H stand also:
```
--------------------------------cut-------------------------------
typedef unsigned long size_t;
--------------------------------cut-------------------------------
```

Two things I miss in AHCC, at the moment:
In PureC you can define a path for the object file which are make. So they are no between the sourcecode.

It is also possible to load the konfi (cfg) with a menu entry or in the commandline. I have for erery project a cfg file.

Gerhard

Thanks for the AHCC! I hope that someday someone can make a Coldfire version from Phoenix. :-)

Hello,
This is great news!!! But when I tried it it does not seem to
load. I have put the Gemsys folder on C drive and let it replace the
files. Just to let you know the old zwether was only about 248,000
bytes and this new one was 545000 bytes is that correct? If that is
not correct then I may have to dig out my old CD's and get LZH
unpacker rather than using the PC to unpack the archive and moving it
over by floppy. Any thoughts on this one?

Yes, this is it, no need to do anything more. What do you mean "does not seem to load" ? It hangs? Return to desktop? What environment / desktop? Loading time with this version is quite long, esp. on 030 machines, it has to load and depack ~50 PNG icons. If you can, test it in aranym with network, it should works out of the box. And remember, all Zorro's code is compiled for 030+ and (!) FPU.

> files. Just to let you know the old zwether was only about 248,000
> bytes and this new one was 545000 bytes is that correct? If that is

Yes, it is. All code (incl. libraries) was recompiled with gcc4 (it produces a little bit bigger binaries in aggressive optimization modes) plus libxml was updated to the latest version (possible code increase). zWeather binary itself is stripped and upx-ed, so the smallest possible size is achieved.

It does not seem to be loading. I am running the latest Magic (6.2 I
believe) with Jinnee 2.5 desktop. I am using this on a CT60'ed Falcon
running at 95 mhz. It would seem load time would not be that long. A
couple of other things noticed, Whenever I open one of my partitions
(Hard Drive or CD drive) when I try to move the window it just moves a
like an 1/8 of an inch then you have to re-grab the window to move it
just another 1/8 of an inch. So you can see that would become very
annoying. When I hit CONTROL-ALT-ESCAPE to bring up the processes
running I notice that zweather is running but is taking up tremendous
amounts of ram. I have 512 mb of RAM and it seems to be taking up
most of that. Not sure why. I will look into the CT60 memory usage
CPX and see what it reports as used and free ram.

Again this should not be a problem for a 060 running at 95 mhz and
built in FPU and PMMU.

OK it seems that maybe I have everything right. But will have to play
around with it some more and see what I can get it to do. In the mean
time let me know if you have any questions or comments on what could
be causing this. I am using an EtherNEC with the 68060 driver from

Didier, or at least the CT60 package.

Thanks for your help,
Falcon060

> Link Host or ADSCSI Plus and TOS v.1.2!

For your TOS 1.2, you have a limit of 256MB per partition, and a limit of 14 active partitions at one time. At some point (1.4? 1.62?, 2.06?), TOS was revised to be able to handle 512 MB partitions, and the Falcon 4.0x TOS can handle 1 GB partitions. In theory, the drive itself can be any size; you just won't be able to access more than 3.5 GB (256MB x 14). It is possible to switch partitions so as to access more of the drive, but it isn't practical. You might want to consider a SatanDisk (why on earth did the guy shoot himself in the foot by naming it that?), as SCSI drives are nowadays are not the most cost effective approach.

The SatanDisk has been replaced by the UltraSatan, which is a much
better name :-). They are currently sold in small batches on eBay UK by
the seller "francisvonkesice" (who has a small problem now with PayPal
since he apparently reached the maximum limit for incoming payments ...
- read atari-forum.com for details).

Mikro,
Apparently I had a corrupt file when transferring from my PC to my
Falcon060. So I have to test my 3.5 inch floppy to find out which is
defective. I ended up downloading all HIGHWIRE, Zweather and
MagicXNet files I needed and burnt them to a CD and all was well.
Zweather works once again!!!! It is great to have this little piece
of wonderful software working once again!!!

Thanks,
Falcon060

Jo Evan,
I wondered the same thing. But, if your running a CT60 at 90+ mhz.
I doubt it takes very long. Once I am at my desktop, it is less than
5 seconds and Zweather is up and running. But I could see where
slower atari computers would be an issue. By the way, how are you
doing? Not sure if you remember me? I was the one that gave you all
the MagicXNet files I believe to look at and see if we could figure
something out for the EtherNAT.

Talk to you later,
Falcon060

Ah, glad to see you have sorted it out. It's true I haven't tested it on MagiC but it would be very strange if it didn't work.

About the loading time: in Zorro's latest sources you can find very similar thing -- all images are bundled in one PNG and stored as MFDB (Atari native) format internally. But hard to say anything about release date, it's up to him or anyone else who is going to continue the development (https://sourceforge.net/projects/z-tools)

Hi Charles,

I would be interested in the computer and drive. I currently use an
older 1040ST and this would be a great upgrade. Let me know if we can
work something out, I would be willing to pay a fair price.

MiKRO,
Maybe sometime this year I will take a look at the sources and try doing some compiling of my own. Then figure out the PNG loading process and see if there is a better way or not. But honestly, it only takes less than 5 seconds from the time the desktop appears till Zweather is up and running. Not sure that it has any benefit other than for much slower computers with not much ram. Even a Falcon030 stock with 14 mb of Ram should do ok at loading this in at bootup time. Anyone have any thoughts on this? Does anyone actually run Zweather on a stock Atari computer. If so, what are your OS, system specs and how long does it take to bring Zweather up and running? Would really tell me if its worth the time to take on a project like this.

I do, and startup is no longer impressive. From a running desktop, kill
Zweather, and start it up again, and it has found its data and finally
pops up in a blistering 32 seconds. This is on a standard TT030, mono
monitor.

I friend of mine, has a 1040STe and asked me about any
commercial quality programs that teach basic guitar cords
and maybe some advanced stuff, that will run on his STe.

Seems I remember one named guitarist or something like that.

Anyone had any experience with any software like that for
STe?

Any good stuff to recommend, that he may be able to
buy new or second hand?

ok Bravo, tell me what you have in stock now along these lines too....

This guy will order.

Hi,

Can anyone tell me what's in this Mega ST ??
I suppose it's an accelerator, but QuickIndex doesn't show a better
speed than a normal 8MHz ST.
Is there a software to activate this clock?

http://pagesperso-orange.fr/gtello/megast.png

Guillaume.

That's the "blitter fix" - a patch that was fitted by Atari to avoid crashes with certain series of blitter chips.

If you have no blitter, or if the blitter does not have the problem, the PCB can be completely removed, but you have to re-attach one PCB trace (on bottom side of PCB, somewhere under the CPU) that was cut when adding the fix.

How can you tell if your MegaST has the bad Blitter?

Is there a certain program that you can run?

Also, were there any problems with Grounding on some of the
MegaSTs?

If so, any trouble spots/fixes would be helpful.

I've a few Atari Falcon 030 items for sale.
And some ST/e games and applications.

Atari Falcon 030 Memory Boards
---
1 Factory 4 meg Memory Board like new $39.99.

1 Ram Gizzmo 14meg Memory Board like new $84.99.
(simple to install, just remove your old
1 or 4meg board and plug in the Ram Gizzmo and
get 14megs of Memory!!

1 Factory 1 meg Memory board for Atari Falcon 030 $29.99
Nice to use for Faster bootup if you have a Falcon upgraded
to run on other Memory.

Atari Factory Monitor adapters.
---
1 New in Box RGB monitor adapter for Atari Falcon 030. $19.99.
1 Used RGB monitor adapter for Atari Falcon 030. $14.99.

1 New in Box VGA monitor adapter for Atari Falcon 030 $24.99.
1 Used VGA monitor adapter for Atari Falcon 030. $17.99.

Atari Falcon 030 Factory Box, Like New in super nice condition. $19.99.
Great for collectors, will add value if selling your Falcon on E-Bay/etc.

Atari CDs and Software
---
Bird of Prey CD Like New $9.99
All Things Falcon CD Like New $9.99
Crawly Crypt I CD Like New $9.99
Crawly Crypt II CD Like New $9.99
Atari Compendium CD Like New $9.99

Atari Falcon Misc Hardware
---
Factory Original Internal Speaker $19.99.
Factory Like new Power Supply $69.99.
Factory used working Power Supply $39.99.

Atari ST Games/Applications/Etc Software on Disk
---
I've alot of used ST/e games and applications.
All are original disks, with manual and box.
If you are looking for a specific game or software title,
e-mail me as I may have it and will try to give you a

reasonable price.

I have one like new BlowUp Hard External Screen/Video enhancer
for the Atari Falcon 030. Comes with Disk Software and paper
docs/manual. I got this new and haven't used it as I have a ScreenBlaster
II
which is almost the same thing. Plugs into your Monitor port and allows
higher Screen Resolutions On S\VGA and RGB. Mainly for VGA SVGA, MultiSync
monitors. Has pre-set resolutions to use or you can setup and save your own!
Will easily do 800x600 in 256 colors and much higher.

Its a very Clean way to get Better Screen Resolutions on your Falcon without
doing a internal upgrade.

This is a hard item to get, (at least for me) will sell for $129.99
or may trade to some Atari Item(s) I could use.

Wanted List
---
Looking for a VME ethernet board for MSTE.

Adapter board for connecting a Nova/SuperNova Graphics
Card to a Falcon. Or if someone knows a DIY fix, e-mail or post please.

Has someone got a list of available ways to connect ST/E-Falcon to the
Net thur a LAN system and or Cable Modem?
I'd like to gather some info on the ways it can be done, any links or etc
would
be of help.

Accepting Cash or US Postal Money Orders only at this time.

If you are overseas and want to buy something, try working something
out with a trustworthy friend in the US to get payment to me
and I'll ship directly to you or your friend.
Must have payment first.
Also, I do not rip people off, it would not benefit me to do so, I'm
not made that way.

If there is something here you want, e-mail me and we'll see what we can
do. I try to be flexable as I can when selling anything.

> How can you tell if your MegaST has the bad Blitter?

First check if it has any blitter at all ;-)
I think there were lists in the german chips&chips hypertext. Other than that, you could probably just try if it is stable without the fix.

If you do not need access to the CPU pins to install some upgrade, just leave it as it is.

If you do want to upgrade the machine, simply throw out both the fix and the blitter. Optimized VDI code (like NVDI) is actually faster than the blitter, so this is no real loss, especially if you install a CPU upgrade.

> Also, were there any problems with Grounding on some of the
> MegaSTs?

None that I remember. Do you have problems with the machine?

Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

I have a MegaST here that I've been tinkering with.
I have a few upgrades that I can install, one being a JRI Genlock.
I also have a large board that I bought from e-bay some time ago,
It was advertised as being a Memory upgrade board, I'm not sure
what it is. It's a very long board that plugs into the mega board expansion
socket and has a port that goes out to the back of the mega where the little
slide door is. It's a 9 pin connection.

The board has ATR-4CP Rev A3 on it, also Image Systems Corp. 1989
Made in USA.

There is also a 64 pin connection on top of the board.
There are alot of chips on this board.
The only square socket chip is labled Bt Bt454KPJ.
I notice a 65mhz clock? on it, also has 2 empty sockets. One large
Square one with a small one next to it. The large socket has round
type holes, looks like for a chip with round pins fits into it.

It also has a 6 pin wire connection and came with a cable that fits
it.
I didn't get any instructions with it, but was advertised to me as a
large Memory upgrade board.

I was told it came out of a MegaST and did work.

I'd like some info on it, what it actually is and does do.
I can provide pics if that will help.

Also, a question regarding the MegaSTs Video Shifter Chip.
When putting one in the MegaST, does the writting on the chip
look upside down when compaired to the other chips around it?

I'm not sure if the socket for the shifter is put in backward or not
going by the Pin 1 Notch on the socket and chip.

I don't want to put the chip in the wrong way, in other words.

# 5067. Clabs Unitor II cart

Newsgroup: comp.sys.atari.st
Date: 2010-02-16 21:04:25 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4b7b085b$0$12464$bbae4d71@news.suddenlink.net>
Source record: 1485

Greetings,

I have a Unitor II cart and a Log 3 cart.
also, have original Notator and Cubase Audio packages.

Regarding the Unitor II cart, it has a Multi-port on it,
what can this be used for?

I'd like to read some examples of anyone who used or uses the
Unitor II for SMPTE and anything regarding the Multi-Port.

# 5068. MusiCom2

Newsgroup: comp.sys.atari.st

I have a Original MusiCom2 Software package.
Which I've used in the past for sampling.

There was suppose to be a hardware box availabe
for it, I've never seen a pic of it. Does anyone have
this box and could e-mail me a pic of it?

Also if you have one for sale/trade or a similar
DSP box for use with Cubase Audio or other
Music related software, do contact me. I am
interested in buying/trading for one or more.

And, I will trade hardware/software for
atari hardware or software that I'm looking for.

Source record: 1487

NVRAM

Which pins on the NVRAM chip does one need to
connect a external Battery to, in order to fix the
weak or dead battery problem.

I've a Falcon here that I use for testing various modifications
on.
My NVRAM chips all seem to be the same type, which I
think is known as Type A.

I need to know what the original voltage was of the battery
in the NVRAM chip. And which pins that I can get a
voltage reading from, and for trying a external battery
modification.

Source record: 1488

Hi comp.sys.atari.st folks! For anyone near Sacramento, California (or SF Bay Area, and willing to drive one or two hours), we'll have at least one Atari ST at the following event[*]...

Atari video game aficionados from near and far will host the second annual Atari Party in Davis, California on Sunday, March 14th.

Atari Party invites the whole family to a day of games, prizes, and even a little bit of learning. Test your skill with 300 video games on 30 game systems dating as far back as 1975, plus get a chance to win prizes in a free raffle, learn about the golden age of Atari with a screening of the documentary film "Once Upon Atari", and experience the first major motion picture to extensively use computer graphics with a screening of the 1982 Disney film, "Tron."

Admission is free and children are welcome. Raffle prizes include retro-style USB joysticks from Legacy Engineering, books from O'Reilly Media, gift certificates for ThinkGeek.com, and classic Atari computer systems.

Atari Party is March 14th from 12pm to 8pm at the
Redwood Park Community Building, 1001 Anderson Road in Davis, California.

For more information, visit
http://www.newbreedsoftware.com/atariparty/

[*] It's a 1040STe.

I don't know about your Falcon, but on my Falcon and that of several other Cheshunt Computer Club members, the battery had to be connected to wires in the chip itself, after carefully removing the top layer. and not to any of the pins. My chip was marked 48T87 C and Z143906. The battery is a single small lithium cell.

In the end I found it easier to replace the NVRAM chip - they cost only a few dollars. Fitted a socket at the same time so I can change it easier when this chip's battery expires in a few years time. This needed a hole cut out of the shielding above the chip (or omitting that part of the shielding). Keyboard fits over it OK.

Regards, /Peter/

Good news,

I found 4 original ST Log Disks, Issues 32, 33, 35, and 36.

Not sure if I have any more or not.
I just found them took a few snaps of em, I've not
looked at em yet, My 1040STe is setup enough to check
the disks, and will do that this evening or tomorrow.

I have boxes of ST Disks, some are backups of stuff and alot of
those are not labeled. So I have to literally look at each disk to see
whats on it.

I'd planned on going thur each one and make a .MSA disk image or
something similar of each disk.

Would the MSA format be the best for doing this to preserve the
data on each disk or is there a better system for doing this?

Hi,

I have 2 Falcons apart down to the motherboards, One for experiments
and the other one has a problem that I'm trying to fix.

Both have similar looking NVRAM chips, 2nd set of numbers are the same
but top number is different and numbers on top left corner are different.
I've took a snap pic of each, I'm going to try e-mailing them to you.

Pass them around to anyone, who knows something about these.
Just don't post them anywhere without asking me please.
I consider my snap pics, as part of my work.

Anyone who uses a Falcon or does work on chips like this and
wants to see the pics, just e-mail me and I'll e-mail them to you.

thanks,
Barry

# 5078. Site for posting Atari Based Computer Pictures

Newsgroup: comp.sys.atari.st
Date: 2010-02-18 22:55:42 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4b7dc570$0$12453$bbae4d71@news.suddenlink.net>
Source record: 1496

Greetings,

Is there a general site, where one can post small pics
of Atari related stuff and also post a question or comment?

If not, I think it would be a good idea for someone to start
one. So that we can share and show pics of general interest
and or problems.

I don't mean a FTP site, just like a Web Page, something
like Cjoint does.

I have some pics I'd like to share, and some questions about
hardware that would be better understood if I could show you
a picture.

It's just a idea that I have.

# 5079. ST Games for sale...

Newsgroup: comp.sys.atari.st
Date: 2010-02-19 03:17:05 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4b7e02b2$0$12422$bbae4d71@news.suddenlink.net>
Source record: 1497

I have like new the following ST games for sale.
These are hard to find and the only ones I have left.

ORGE- like new in original box with everything. Pics available

AUTODUEL- like new in original box with everything. Pics available.

Both of these games are in really nice condition.
Price is $24.99 each.
I've seen these games priced well over $40.00 each on E-Bay before.

Also, Two Really nice Electronic Novels from Synapse and
Brouderbund. These are rather rare. The disks are labeled for
the 520ST.

MINDWHEEL- Original HardCover Book with book cover and original Disk
software.
and
ESSEX- Original HardCoverBook with book cover and original Disk software.

No Box with the novels but are in very nice shape even the book covers are
in
good condition for their age. Pictures are available.
I'd like both Novels to go to one home.

Both Novels with original software $37.99.
Which is a excellent price considering how rare these are.

I also have some InfoCom Adventures original with all the items.
If you are looking for one or more e-mail me the title(s) you want
and I'll check and see if I have em. I'll give ya a good price on
these.

Looking for a game or application/utilitie for the ST/e or Falcon.
e-mail me your want list. I'll provide pics if seriously interested.

E-mail me at phantomm@suddenlink.net
or the one below if you have trouble with the 1st one.
phantomm@bellsouth.net

All the NVRAM chips I have seen are basically a RAM chip with a large
plastic cover and cell underneath. If you don't prise the plastic cover off
```

the flat Cell (a battery should really have more than one cell) will drag
the output of you good cell low. So I suggest that you prise the top off and
remove the flat cell. You will then see what voltage the cell and what pins
it needs to be connected to....

Greetings,

I'm looking for someone in USA to test
a AlberTT graphics card for me.

You must have a atari MSTE or atari TT.
Or an atari that has a VME port

The card fits into the VME port.
It's not hard to install, nothing to solder.
But it would be best if you have some
experience with electronics and knowledge
about monitors. And know something about
graphics cards.

I'll supply the card, software, cable, and some
paper info. If you have the extra time to
test it.

I don't have the extra Computer with a
VME port to try it out.

If interested, e-mail me for more info.

But they aren't all like this I'm afraid. The OP might be lucky, in
which case repair is simple (a CR2302 cell in a separate holder IIRC),
or if the NVRAM chip is the more usual solid construction, then
replacement is the only option. And it's best left to someone who has
experience in this area.

I have one. I use the latest flash (forget which one as it would be more than a couple of years old) it has the misfortune on my early CT2B of restricting it to 32meg. Its a trade off, latest flash or more ram and as 46 meg of ram appears to be enough for me, I'm not that worried.

I only have a stock Falcon setup atm tho, which remind's me I need to repair my screenblaster.

Mark

I didn't know that any of the Flashes had a effect of the size of FastRam!?

Like to know which one, and the side effect, crashes?

Cable is smallest problem. Atari ST and followers have no S-Video
output.
So, you need some modding in machine: http://ppera.07x.net/atari/stvid.php

Or get some RGB-S-Video converter . Basically, it is not too hard to
make yourself one - with some PAL encoder chip...

ok, I've seen that page before.

I need a S video Cable with 2 RCA type plugs on one end for (luma and
chroma).
They need to be male, but I have adapters if they are female.
If someone has one of these or can make me one, e-mail me.

: In a TT, I'm not sure, but I think 2.

Definitely 4. TOS 2.06, for STe, can be had in two chips.

Its not the flash that effects the ram size, its the chipset. Because it
has an early chipset there are issues with its memory addressing. I
wouldn't be worried about it if I were you.

As for stability, I've struggled to keep the CT2 stable, its VERY fussy
about what it will and won't run. I'm not sure the reasoning behind that
but suspect its more mainboard related. I have a TT and another 14 meg
Falcon so I have plenty to experiment on ;-)

Aim is to have on one place all quality ST games in proper forms, with
checked content.
With screenshots, cover scans, videos, main data. If possible and has
sense, there will be exact images of original (STX if copy protected,
otherwise MSA, SST, ST), images of deprotected floppy versions and
hard disk runnable images.
Site is under construction currently, and it will take a lot of time
to fill it with thousands of games.
Of course, many depends of user feedback, contribution.

Well that's good and all... I'm sure it will be useful.

I am looking for a S Video Cable with 2 ends that have chroma and luma for
my Expose Digitiser. If someone can make me one, or has one. I will
pay a reasonable price for it, or trade atari stuff if you want something
from
my atari collections. Also have PC games in original boxes with manuals.
Many haven't been used.

Also, does anyone know if a 8 pin mini din port (Y) adapter exists?
If so, e-mail me a link, address, etc where I can order.

I need to split a out put into 2 different inputs.

If not, I need a few of these made, should be able to make one out of
cables.

ok, I have 2 CT2Bs, and one is more stable than the other.
Actually, it's almost as stable as a stock falcon. I can run just
about anything on it.

They other one is not as stable. However, the software setup is
different. I need to change the main bootup manager to XBOOT III,
which I have (original package) and do some sorting of Auto and ACCs.
Some need to be removed as I've found that some are just about the same
thing, just in another look. I'm suprised that it is as stable as it is, as
I
had that one loaded down with all kinds of ACCs, Auto programs and then
the stuff related to the desktop. However, I had the best software I could
get at that time. It needs the software streamlined and maybe a few
heatsinks
and a few wire connections checked.

But I have found the IDE upgrade on both to be rock solid and alot faster
than
stock. Also, the videomodification if done right, allows solid TC
resolutions above
640x480. The software for that modification needs installed correctly too.
I found that on one, it worked but wasn't setup correctly. And there are 2
or 3
versions and only one needs to be used.

Having programs installed that do the same thing but may have a few
different
features can cause problems on a CT2B imo.
I've found that just about anything will work, but keeping it streamlined is
part
of the answer to a stable CT2B system. Also, the wire connections need to be
secured. I've used a HotGlue Gun on some connections for stability and
insulation.

I also have a almost stock Falcon setup and a couple of motherboards to
tinker on.

You mentioned a different chipset. I know there was a Centurbo I or(
A )version,
that had the expansion ports.

If there were different chipsets on the B version, I'd like to know which
ones,
as I have 2, and there is a difference between the heatsink and Fan on the
boards.

Also, anything about Dolmen you can tell me, or anyone?

For me the CT2B is just what I needed on my Falcon for extra speed over all. I think it was the right way to go, because compatibility is really good, at least on
mine. But there are improvements that could be done.

The Blitter thing was/is annoying. I never fully understood why it had to be disabled,
And it's one of the main causes for crashes.

However, when getting it all setup correctly, it's a real nice speedy way to fly.
It's not the Fastest, but being able to use Apex and some other software with
extra speed and memory is nice.

If anyone, knows of any modifications, software or hardware for better performance
and stability of the Centurbo II version B, or earlier versions, then I'd be very
interested to read or see them.

There are 4 TOS chips in a TT?
hmmm.... Interesting...

I've never had a TT before, about the only atari system
that I've not had at one time.
I'd like to have a nice one.

My mistake about the number of ROMs, I thought there were 2,
but I was just guessing as I've had no experience on that system,
I know about the MSTE which is similar in some ways.

I do wonder if this is a good idea to put all or most ST games up on the
Net.

I'd like to read some discussion on it.
I'm not trying to keep atari owners from atari related software.
But once, it's all on there, what then?

Call me old if you want, but I'd like to see some good CD magazines with
some games, articles, music and etc.

Sort of a ST Format, but all on a CD, and the CD doesn't have to be full.
Why not have some CD magazines, with a Web Site as a Base.
Atari owners can have a chance to add their creations, articles or whatever
and have a CD every month or two.
The Net is fairly large, I think we need something to get us a little
closer.

I only know of one ST related CD type magazine, The name escapes me
at the moment. I think they put out about 4 CDs, I thought it was good.
One or two of the CDs were mixed mode and had a couple of Music
tracks on the CD. I think the one I'm talking about came out of France.

Now maybe there have been other atari CD based mags. but I've not
been made aware of em.

I grew up reading Compute! Magazine, and I treasure every issue I have.

All those debates about who had the better machine and etc.

The thought of having all the really good ST software online,
for anyone to download, to me is like handing the keys to your

house to thieves.

And with it all running on PCs, there will be no such thing as
an Atari ST Group. Some of the younger crowd, don't
fully understand. Those that grew up when it all started,
and have kept on, know more.

One of the reasons ST software is so good, is that the code is
tight. Programmers only had so much room to work with and I
know it wasn't easy to code some of that stuff.

What about other platforms like Amiga, and the older Apple software.
What's the situation with the software for those systems?

Have they put all there good stuff online for download?

> Have they put all there good stuff online for download?

Right, almost everything is online. Let say some 98% of SW. However,
it is not easy, especially for beginner, inexperienced people to find
certain game. Because there is a pretty mess with menu disks, with
diverse floppy images which are just copied, patched with some
unnecessary (or even harmful) bootsectors etc. Tosec is considered as
most complete archive, but it is full with corrupted files, repeated
images etc. In fact, best is gamebase ST, but it is not for Online.
My goal is not to have everything, but to have good stuff, checked,
and in proper for for users - so may run games on real machines with
floppies, hard disks or via emulators. Then to have some useful infos
about games - pictures, videos, limitations listed etc.

ST code is sometimes compact, sometimes not really.

I'm sure that WEB is full with Amiga, old Apple stuff too. But I'm
experienced only with Atari ST. And we are now at other important
point - to do game Archive properly you need to be expert about
certain platform - so can judge what is good floppy image etc. As I
see, people maintaning archives is usually far from beeing expert.

## 5116. Re: atari-forum.com?

I must agree, What would happen to the 1000's of small Atari ST only
Stores ?
They would suffer sales and go broke!

Sears and other large chains would Stop selling Atari Software!! OMG!!

Sales in the millions would goto Lowest levels since 02/22/2010!!

Goto one the local stores in your area and buy games there!! look in
the yellow pages!!

Jk

Yea very funny.

I see it like this,

Put it all on there, then.
Everything new or old.
Soon as it hits the store shelf, no matter put it up on
the net for free. And your mothers ugly Face too.

Well, its not *direct* support, but I use a script with BBS Express! ST to work with my CD-Roms. Works pretty good - users can browse the CD's, tag files, and download them from the BBS proper. At one time, I had 2 of the Pioneer 6-pack CD-Roms up and running with it, using Anodyne Softwares ExtenDos software. I actually had 10 CDRoms available online. We're slimmed down now, but we still have 2 CD's online. :)

Don't confuse CT2 A & CT2 B please...

Your CT2 is A, not B.

A = 32 MB max with early chip (from National Semiconductors).
B = 128 MB max with my designed chip (CPLD)

The letter is on the PCB after CT2...

Regards

Mines a CT2B Rudolph, with early flash it pulls up the full 64MB chip,
later flash only 32mB is available. Still a good card tho. ;-)

CTPCI boards are ready at the factory
I will get them monday.

I have to test some boards and the shipping will begin just after for
developers and others after, in the order I get the payments.

# 5136. Re: The Centurbo II version B or (CT2B)

Newsgroup: comp.sys.atari.st
Date: 2010-02-27 10:23:50 UTC
From: Rodolphe Czuba <rodxxxxx.xxuba@free.fr>

Source record: 1404

Not normal thing because ALL CT2 B have the same code and ship !
And the EDO ship is decoding and managing 128 MB.

What do you mean by 'flash' ? the software inside flash ship or CPLD ???

# 5137. GEMDict 0.1: FreeMiNT client for the DICT protocol

Newsgroup: comp.sys.atari.st
Date: 2010-03-01 17:11:27 UTC
From: "J. F. Lemaire" <jflemaire@skynet.be>
Message-ID: <4b8bf537$0$2882$ba620e4c@news.skynet.be>
Source record: 1405

Hello,

The first version of a new Internet client is available at the following
address:
http://users.skynet.be/jflemaire/files/gemdict-0.1.zip

GEMDict is a program for the DICT protocol, which allows querying online
dictionaries and retrieving definitions.

Requirements:
- MiNTnet;
- AES version 4.1 (only tested with XaAES for the moment);
- NVDI.

Limitations:
- Non-ASCII characters only possible with the system font, with the
ensuing limitations;
- incomplete documentation;
- "match" mode barely useful.

Advantages:
- It's a first!

Installation:
- None to speak of, apart from the files "gemdict.hyp"
and "gemdict.ref" that must go into the GUIDES folder.

Thanks to the HighWire developers for the Unicode-related code and to
Jean-Luc Ceccoli for the tests.

JFL

Sorry for the delay Rudolphe, I haven't used it a lot lately as the
battery has given up in the dallas. Will have to sort it out as I'm
rearranging my den ;-)

With a 64mb EDO installed it registers as 32mb with the most current
version of the bios (software inside the flash) yet with older versions
it pulls up the full 64mb. I will get it up and running again in the
next week and let you know how I go.

Cheers

Mark

Two, "A" and "B". The Original ST had no drives and used an external drive
with a through socket. The Drive Select line is rotated to the next pin as
the signals flow through the drive. This allows two drives to be cascaded..

I have a feeling there was a hack some where for a third drive. Not sure if
it used the printer port to get the extra drive select or decoded used a 2-4
line decoder to expand the existing ones...

Hey Dave. Yep, I think there was at one time. Somewhere in one of the UK
magazines maybe, or some place like that.

So, you should use the previos version of the flash to have 64 MB.
AFAIR, the lastest version was release after I leaved the company... and it
is possible it is buggy !
Give me the date of the version I will tell you if it is good or not.

Cheers Rudolph, jut plugged the old girl in. I'd forgotten how fast and
how much fun it is ;-)

According to putflash, the current version is 1.39. I can't recall the
earlier version that allowed for 64mb. Do you happen to have an archive?
I could sit down and figure it out that way. I do seem to recall it was
quite an old version tho.

Thanks again.

Mark

Got an answer for you. 1.32 or earlier pulls up as 64 meg, 1.33 or later pulls up as 32 meg. Now to replace that pesky clock chip.....

Thanks Rudolph

Mark

Yes, 1.32 is the good one.

There is an archive on my pages for CT2.

http://rodolphe.czuba.free.fr/CT2/english/welcome.htm

Cheers Rudolphe. Been so long since I've used this thing I will have to relearn its quirks. Got it sitting next to my TT030 atm, ;-)

1.32 it is.

Thanks again

It was stressful, I forgot my 2600 & 7800 cartridges,
I wore a hole in one of my socks, and I'm sore all over.
...but overall, this year's Atari Party was GREAT!

Check out the photos:

http://www.newbreedsoftware.com/atariparty/2010/photos/

As people give me permission to, I'll be adding more photos,
so if you're really curious about it, check back again in
a week or so.

Enjoy!

# 5157. AHCC V3.b8

Newsgroup: comp.sys.atari.st
Date: 2010-03-17 22:28:16 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <1a332$4ba157b7$4df94c07$3267@news.chello.nl>
Source record: 1425
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

```
LS

There is a new version available on my home page (see sig)

Changes:

Compiler:

Option -7 preliminary Coldfire V4e target.
=========================================
See also: Status of Coldfire support.

Fixed Option -c- No nested comments didnt work.
Fix in option -*i (32 bit int)
error 'no declarer for extern object'
changed to warning, default is 'int'.

New warning: 'no prototype for 'name'.
warning: 'no args matching' only if there are args to match
and only for old style prototypes.

Removed option -4 (double is float)
Removed option -*s (scale 32)
It appeared that Pure C does long scaling the same way
without being optional.

A few small fixes for very rare situations.

Removed a spurious call to a diagnostic print routine.
Reduces all binaries by about 7Kb.

Relaxed a limitation on the number of names in the Pure C
object output format.

Linker:
Improved load map.
All symbols are printed.
Local symbols are enclosed by < >.

Option -n: Write a 'nm' style list of symbels to prog.SYM

DRI symbol table in executable:
write symbols first 22 characters in stead of first 8.

Assembler:
Allow size .b in Scc instructions.
Detection of '*' comment in lexer.
```

new directives: (from devpac)
incbin
include a binary file as is at the current position.

section
allowed operands: text, data or bss.

Library:
Merged ainclude and sinclude folders.
ainclude is now obsolete and removed.
The sinclude folder can be used for both Pure C libraries
and AHCC libraries.

All 16 bit integrals in sinclude are declared as short !!!!

FILE structure of AHCCSTD.LIB compatible with the one
of Pure C lib. (Needed for fixing AHCCSTD ;-)

Fixes in AHCCSTD.LIB

Changed name of folder from AHCCLIB to AHCCSTD

Update wind_get. (table of number of replies)

Have fun.

Sounds a little confusing in a natural language context :-)

typedef struct { ..... } FILE;

is what I was talking about.

# 5161. Nordic Atari Show 2010: June 11-13

Newsgroup: comp.sys.atari.st
Date: 2010-03-20 16:41:20 UTC
From: PeP <pep.fishmoose@gmail.com>
Message-ID: <34bae637-83b0-4175-8e2b-c98d38c7003e@b7g2000yqd.googlegroups.com>
Source record: 1429

Friends!

I'm proud to announce the 2010 edition of the Nordic Atari Show (NAS)!
The event takes place June 11-13 in Falköping, Sweden (about an hour
from Gothenburg by train).

NAS is an annual get-together organized by the Swedish Atari Club
(SAK). It's a simple, improvised event; the idea is to hang out, eat
pizza, and fool around with our beloved Atari machines. The essence of
NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are
welcome as well. However, if you're 14 years old and wish to play
Counter Strike with your friends, please go somewhere else

For more information, take a trip to: http://www.sak.nu/index.php?ucat=15&sta
... index=true

# 5162. wanted NVDI 4

Newsgroup: comp.sys.atari.st
Date: 2010-03-20 18:28:27 UTC
From: Jim DeClercq <jimd@panix1.panix.com>
Message-ID: <ho344b$gb6$1@reader1.panix.com>
Source record: 1430

I want and need a copy of NVDI 4. The reason is that NVDI 5 or 5.03 does
not play nice with x-windows, or at least I have not found how to make it
cooperate.

Jim

Maybe provisions for Papyrus, and Speedo Bitstream vector fonts.

It sets a FIF path in NVDI.INF, but does not write a FIF file there.

I do own a FIF file, which is not recognized as such, but I do not know
which version wrote it, and one that does not default to BTFONTS might
write a proper FIF file. What I have is two disks of NVDI 5.01, and the
upgrade disk to 5.03, and what may have been the very last CD of 5.03.

I also have a printed-out fonts.db, which is not what x-windows writes
now, since NVDI finds only system fonts now.

In other words, I really do not know what is wrong, and need to try
something else.

Jim

Source record: 1435

I finally got what I wanted on my TT030 SCSI bus. It should not be difficult, but I used a bus extender from Granite Digital, with input connector terminated and output connector not terminated (which seems to be important) and now have one CD/DVD box, one tape backup box, one ZIP drive, and one Epson 1200S scanner.

As a matter of note, I once had a fuller SCSI bus, and do not have a clue as to why I can't get my other ZIP mech recognized.

This is when I discovered that LOOK2_UK.PRG was munged, and its LHZ source was too. I have spent several hours looking for another copy, without finding it, both in my disk connection and using the wwwait.

It is the only driver for this scanner on this platform.

Does anyone have a copy they could send me?

Jim

I'm afraid I don't understand the problem. What doesn't work? Papyrus?
X? I used a plain xserver-install and a plain NVDI5-install (5.03)
without problems.

You should! Like the invite says, it's a losely organised event,
focusing on hanging out and working on our projects. My personal
experience is that actually talking to other coders IRL gives me lots
of new angles in my projects, feeding the flame so to speak.

You're extremely welcome if you decide to show up! I don't know
exactly where you're located, but how about a joint venture for you +
Odd Skancke?

Thanks for the answer, Derryck. Your website is one of the places I looked, and no, that is not for the kind of scanner I have.

I did page through printed out indexes to archive sites, and even typed the file name into two search engines, before asking for help. When the file name cannot be found, except in magazine articles about it, the file is pretty scarce.

Obviously, I have some mysterious problem. X-windows, under exactly the
same circumstances, does not find the fonts it used to find.

Papyrus is not currently installed. I do not need a document processor,
with a very good typing program and Calamus.

What worked for you does not currently work for me, and I am looking for
something else to try. The something else I am looking for in NVDI 4.

I did look at my mailbox, and thank you very much. Downloaded, and used,
for a particular project. I own a Minox B camera, and if you set it for 18
inches (english unit model), hold it at arms length, look into the lens,
and one gets a distorted view of oneself. Now I have that in TIF format.

Concerning NVDI, the problem might be my machine, although the only thing
that seems to be wrong is that the DMA chip is dead, so laser printer does
not work. I have no idea what NVDI does with a DMA chip, but what does not
work now worked at one time, and everything else about this machine seems
to work.

Thanks again. Scanner is a scanner again.

Then the circumstances must have changed ;-) You mean that it doesn't
find the VDI fonts, right?

Have you tried the following?

1. Delete the files /etc/X11/fonts.alias and /var/lib/Xapp/fonts.db.
2. Make sure that X.app has write access the the folders mentioned
above.

> What worked for you does not currently work for me, and I am looking for

I doubt that downgrading to NVDI4 will help, but it might be worth a
try. Unfortunately I don't know where to find it.

: --

I have some parts on order to check out a suspicion. The ASCI port does
not seem to work, the floppy port produces only an occasional note that
the disk is defective, and both those things use the same DMA chip, and
the port uses three DIP chips. If, and only if, NVDI burps because it
cannot verify that a laser printer exists, this might (or might not) solve
my problem.

I have swapped laser printers, since I have two in working condition, and
that changed nothing.

I will of course try what you suggested, and report on the results of
that.

> my problem.

Disable or remove the SLM-driver, if the problem persists then this is
not related to the printer. Does other apps (like Teradesk or
FontSelect) recognise the fonts?

# 5197. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-04-04 20:10:12 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4BB8F224.4060902@atari.org>
Source record: 1265

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 306 AMD64
aranym-0.9.9.linux.ix86.rpm 499 ix86
aranym_0.9.9.linux.amd64.deb 86 AMD64
aranym_0.9.9.linux.i386.deb 200 i386
aranym-0.9.9-cygwin.zip 1386 i386
aranym-0.9.9-macosx.dmg 742 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 256 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1091), Windows (1386), Macintosh (742) = total 3475.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

> They just removed Linux support from the PS3....

Ho yes. I know, because I just updated the 3.21 firmware on my PS3 Slim.
I'm wondering how many PlayStation 3 owners ran ARAnyM on their machine.

Anyway, we are looking forward to have an unofficial GNU / Linux hosted
with PlayStation 3. I'm deeply convinced that the Linux adventure will
not stop like that on the nextgen hardware. You know that GNU / Linux
started on the PC hardware with the hostility from the whole IT market.

Finally Apple that was so reluctant, completely adopted free software.
PS3 developers were totally stuck with Sony's NDA, but now it's clear.
It's just a point to know if the Cell CPU will spread or finish selling.

I imagine that next developers will not have to cope with hypervisor and
all the restrictive protections Sony took against system's developers.

Anyway, if the PPC code included in the *miniPack* is not useful for
PlayStation 3 owners, it can always run with PPC-Linux hosted boxes.
The PowerPC version, even if it's built on PS3, is binary compatible.

ATARIstically yours =)

## 5201. M_Player on the STE

Newsgroup: comp.sys.atari.st
Date: 2010-04-05 14:27:10 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4bb9f33c$0$28939$ba4acef3@reader.news.orange.fr>
Source record: 1269

Hello,

After 11 years of "pause", I worked a little on MP_STE, the 68000
version of M_Player.

Some functions were enabled with SHIFT or ALT from the main dialog, I
changed that and added some clearer buttons.

I explained how MP_STE works, and particularly the FLM conversion of
AVI/MOV files to view them with a better quality on a basic 8MHz STE.
Everything is on this page:

http://pagesperso-orange.fr/gtello/mpste_e.htm

Guillaume.

# 5207. "QL & Mac are 25" show Oct 31-Nov 1, 2009 - Aftermath

Newsgroup: comp.sys.atari.st
Date: 2010-04-09 21:49:13 UTC
From: Urs <sinclairql25@gmail.com>
Message-ID: <16272667-8d49-4f28-a166-347778f9f907@5g2000yqj.googlegroups.com>
Source record: 1275

Dear all,

It has been a while since the show. Well, the show photos (320 pictures) are online since November 2009 but in good old Sinclair manner it took longer than estimated to complete the aftershow-webpage. ;-) But it’s ready now. Highlight of the recent QLvsJAGUAR website update is the QL-Mac-Show page which holds now all presentations of the various sessions in both Microsoft PowerPoint (PPT) and Adobe Acrobat (PDF) formats. In addition you can watch related videos on YouTube. URL is:
http://tinyurl.com/ql-mac-show

Don't forget the have a look at Linus Torvalds (the creator of the Linux kernel) GMOVE software blitter for the QL on the QL-is-25 webpage. URL is:
http://tinyurl.com/ql-is-25

In addition to the aftershow stuff I uploaded more pictures and videos of past QL shows to Windows Live Skydrive and YouTube.

If you're interested in more audio/visual QL resources you may try out one of these URLs:
http://tinyurl.com/ql-story
http://tinyurl.com/ql-pics
http://tinyurl.com/ql-videos

I’m unable to attend the QUANTA Workshop & AGM 2010, Birmingham to be held on Sunday 18th April 2010 (http://www.quanta.org.uk/index.asp) but will join for the international QL-meeting 2010 in Prottes, Austria near Vienna in June (http://www.kuel.org/). I hope to see many of you there.

Best regards, Urs

Do you have a CD-ROM driver installed? HDDRIVER alone is not sufficient
to read CDs.

You need a CD driver.
The common one, and free, is METADOS.
You can find it on the WEB, it requieres a little text file to be
adapted to your own configuration. The default text file (CONFIG.SYS??)
contains a lot of detailled explanations.
But... If you are using a STE, some DMA/SCSI interfaces don't work with
CDs... I had two of them in the past.

Guillaume.

You would also need the software from Anodyne (Extendos Gold, Cd
Backup, etc.) That is what I use and they all work great. With this
software you can also hook up a DVD drive to your Atari.

Falcon030 with 16meg of ram

Dear Joe B., I have my Mega ST4 with Internal Floppy Drive as well as 2 More external Indus GT Drives! One 3.5" and One 5.25" GT Drive! The Indus 5.25" GT Disk Drive was made for the 8 Bit Atari! I use it to Transfer 8 Bit SoftWare that I download off the Internet onto my Atari ST so I can Transfer Games and Such onto 5.25" Floppy Disks so I can Play on my Atari 800xl!Credit goes to a special Cable by Derek Mihocka that plugs into the ST's Printer Port! Mine is hooked upto an A/B Switch Box sharing with my HP LaserJet! I use ST XFormers Transfer Utilities and I can Transfer .XFD and .ATR (I think .ATR?) to 5.25"!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! >

Two, "A" and "B". The Original ST had no drives and used an external drive with a through socket. The Drive Select line is rotated to the next pin as the signals flow through the drive. This allows two drives to be cascaded..

# 5217. Bizarro dream

Newsgroup: comp.sys.atari.st
Date: 2010-04-14 11:30:54 UTC
From: Zoe Stephenson <usenet@daeghnao.com>
Message-ID: <hq491e$4m2$1@speranza.aioe.org>
Source record: 1285

So I had this dream last night, in which I was setting up a business and the previous occupant of the premises was in the middle of clearing out some old stuff. All up the stairs there were piles of 3.5" floppy disks, and at the end of the balcony, on a table, was an old computer, labelled as an Atari ST 1500. It had a kind of steampunk look to it, lots of metal and rivets as well as faded, discoloured plastic, and there was a slot on the side for a wireless trackball device to slot into.

Crazy, huh?

# 5218. CT+CTPCI news

Newsgroup: comp.sys.atari.st
Date: 2010-04-14 15:13:02 UTC
From: Rodolphe Czuba <rodxxxxx.xxuba@free.fr>
Message-ID: <4bc5db8c$0$21951$426a74cc@news.free.fr>
Source record: 1286

Hello,

We have good news :

- no more freezing on DMA PLX accesses with a modification of the ABE arbiter (please update).
- A small correction on CTPCI for TA (transfer Acknowledge = end of cycle 060) : should remove some 'address fault' on boot you may experienced and may increase staibility at high speed (above 90 MHz).

With these 2 updates, I ran at 95 MHz during several hours with PLX DMA ON without any crash.
- Anyplayer runs in 256 & 65K with MP3 & MOV playing. No Falcon SDMA , 060 & PLX DMA conflict ! Everybody is running together...
- The desktop icons are here and correct in 65K mode with DMA PLX transfers (this confirm that PLX DMA is OK) ! No correct icons in 256 colors modes...I think it is a software problem here.
- Kronos 1.91 runs with DMA ON and all tests are ok. Sure there are some redraw problems like in the desktop... and it is crashing in 65K at start of OPEN GL test (no problem without DMA).
Note in 256 colors modes with OPEN GL test we get a result of 14365 with 100% 060 use and 14563 with DMA PLX use. So, we can say here that the DMA is replacing the 060 with good performances. The DMA is actually Single transfers (1 long at each transfer) and I have to finish the BURST mode (4 longs per transfer only in DMA read mode from SDRAM).

Now we can use DMA and continue to resolve the software problems...
DMA are necessary for USB PCI boards by example...

Like never before, Didier & Patrice need help from other developers...
They may have some specific work & investigation to distribute if you want to help !
The work to be done stays colossal and they cannot success alone (sure they will but how long time will it take ??).
Join us to debug CT+CTPCI.
Please contact Didier or Patrice M.

Some of you are developers & have not order CTPCI and I hope they will join us.

Thanks

# 5222. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2010-04-17 17:42:08 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4bc9f2f0$0$28924$ba4acef3@reader.news.orange.fr>
Source record: 1290
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

Source record: 1292

Hi,

Read on <http://www.edge-online.com/news/bushnell-rejoins-atari>

*Bushnell rejoins Atari*

Nolan Bushnell, the 1972 co-founder of Atari, has joined the new company’s Board of Directors.

Bushnell has created over 20 companies since the original Atari and has been inducted into the Video Game Hall of Fame and the Consumer Electronics Association Hall of Fame.

Also joining Atari's Board is Tom Virden, a "seasoned executive in the online leisure, technology and travel businesses who will bring Atari his strong knowledge of online business and e-commerce."

Bushnell said: “I am very excited to be reacquainted with Atari at a time when it is poised to make interesting strides in key growth areas of the games industry. The company and its iconic brands have always been important to me, and I look forward to further guiding them at the board level.”

Other notable changes to the Atari Board include the departures of previous CEO David Gardner and Phil Harrison, who have both resigned from their Board roles.

Atari said that the two Board appointments come at a time "when Atari has increased its focus on its iconic brand and world-renowned game franchises while further expanding its business online."

ATARIstically yours =)

Hi,

Do you know that France is a beautiful country ?
I'm sure Nolan Bushnell will really enjoy the trip.
I know California myself. It supports the comparison :-)
I watched recently "2012" on the PlayStation 3. The time
is not yet come to think about those big catastrophes.

This is in facts, a real good ATARI News, indeed !

Best regards,

Hi,

If you're looking at the financial part of the game, here for instance

<http://www.google.com/finance?q=EPA%3AATA>

"Nolan K. Bushnell, Director, Representative of BlueBay High Yield
Investment, Co-founder of Atari Inc." we can think that apart from
his management skills, Nolan Bushnell brings with him investments.

If you're also looking at the fame part of the game, here for instance

<http://www.gamespot.com/news/6192274.html>

"Atari movie to star DiCaprio. Paramount Pictures has given the nod to
making a movie about the life and times of Nolan Bushnell, the outspoken
founder of the company." apart from being the creator of the firm, Nolan
Bushnell inspires history with a charismatic personality, undoubtedly.

For the time beings, if you examine the value for the auction, the
financial part for ATARI is the immediate, and most observable effect.

Nolan Bushnell really looks to be very welcome back to the company :-)

ATARIstically yours =)

I'm sure Nolan Bushnell will appreciate the French one. We also
have frog legs, bourguignon snails, baguette of bread, and bérets.

Sorry Lonny, but you may never have done the trip from Pandora, do you ?
You wouldn't be so rude. I'm wondering if it relates to French usages
or to the famous disgusting "Chuck E. Cheese" fast fooding ?

Were always close to xenophobia, if you don't care with your language.

I can imagine younger generations don't know about Nolan Bushnell.
I don't know much myself. So please, tell me, who's that great man ?

ATARIstically yours =)

Hello,

I upload a multi-layer resource for ResourceMaster 3.65

It contains a german, englich and french version. The french version is not complet translated. If someone will do this, please ask me.

Thanks, to Peter A. West for his help with the english version.

Gerhard

Ho, sorry. Nolan Bushnell is living in California. I mean, if you love
French Fries, then come and eat those in France. It's always better :-)

Best regards,

McDonalds fries really are the best! I used to goto a local McDonalds, most McDonalds have no bigger fries then xtra large! This one, for 10 cents more, was a cup size of a 32 ounce Big Gulp, full of Salty Fries! They used to taste better back when McDonalds secretly added beef Talon to the Oil!For God's sake if your eating at McDonalds you cant expect to eat Health Food! Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Not that this conversation has ANYTHING to do with Atari, but I
personally don't like McDonald's fries. Burger King's and
Jack-in-the-Box's are much better, in my opinion. In-n-Out's are also
good for that "home-made" french fry taste. Wendy's are ok, too. I
simply cannot eat McD's after they've cooled for a minute or two (the
time it takes to get them from the deep frier to the table). Very nasty.
BK's and JitB's keep a good flavor and crispness, even when cool. Again,
my opinion. Now, I digress. That was fun, but now back to Atari stuff... :)

Mike Freeman

Sounds great!
The important for me was to get boths things:
- a faster machine with newer technologies (Ethernet, memory cards, USB)
- the old ports (rom, DMA) to keep running my old stuff.

Guillaume.

Subject: wanted NVDI 4

I want and need a copy of NVDI 4. The reason is that NVDI 5 or 5.03 does
not play nice with x-windows, or at least I have not found how to make it
cooperate.

Jim

# 5252. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-05-02 15:30:13 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4BDD9A85.4070100@atari.org>
Source record: 1370

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 342 AMD64
aranym-0.9.9.linux.ix86.rpm 534 ix86
aranym_0.9.9.linux.amd64.deb 88 AMD64
aranym_0.9.9.linux.i386.deb 213 i386
aranym-0.9.9-cygwin.zip 1557 i386
aranym-0.9.9-macosx.dmg 810 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 280 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1177), Windows (1557), Macintosh (810) = total 3824.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Yes, the process of building the first series has begun, it will take some
months to complete.
But there is still a huge amount of work to do on the software.

> Very nice!

I'm really fond of animations. Since I discovered computers in 1981
(with a Sinclair, and since 1986 with ATARIs) I experimented a lot
with 3D technologies to render drawings with relief and depth.

The next 22th of May 2010 exactly, Mr. PacMan will be thirty. I wish
him a Happy Birthday, specially because playing arcades, he inspired
me a lot. I've described my proper vision of the character with ...

- Icon <http://eureka.atari.org/pacman.gif>
- Comics <http://eureka.atari.org/pacaway.gif>
- In three dimensions <http://eureka.atari.org/pacman.mov>
- Animation <http://eureka.atari.org/walking.mov> with sound.
- In real life <http://eureka.atari.org/pacman.jpg>

I initially drawn him in 1984, when I was at school for baccalaureate.
The character was modelled with Cyber Studio (from Tom Hudson), and
converted from 3D2 to Persistence of Vision with 3D2TOPOV, adapted
for animation in the POV-Ray language <http://www.povray.org/>

I'll have to draw him Mrs. PacMan, but ghosts around him are existing.
You've noticed that I'll celebrate my 30 years computing, next year :-)

I wish you all such a great success, because Patrick Jean is a *master*
We will soon have to hear about Mr. PacMan birthday. So, stay tuned !

ATARIstically yours =)

Sorry it took so long to replty, been busy. Yes it does sound
great. Need to get a new tower and a PCI backplane to get
things working. I will probably build this before I start
on the upgraded Falcon system.

Yeah it is a little expensive (about $800), but I need something
faster then my 16meg Falcon and this machine will fill my needs
for years to come.

Yes, there needs to be software and most important, drivers.
It will have 4 USB ports and I would to be able to use things
like a USB printer. Too bad Frank Nauman passed away. He would
have been an asset in this regard.

Basically, if an open-source driver exists for some operating system (ex:
Linux), there are chances that the device could work on Atari machines one
day. In the opposite case, it is will probably never be possible.
I don't know in which category fall USB printers.

Hi,

I played PacMan for its 30th anniversary on <http://www.google.com/>
Google is my friend :-) Happy birthday Mr. PacMan, it's brilliant !
You just have to press "Insert coin" and eat pills avoiding ghosts.
Ho, this game is HTML5 compliant. I played it with Safari, on my PMG4.

PACMANistically yours =)

It would be nice if the B&B brothers would do an update to NVDI and add
the USB port as an option.

Ther Atari Coldfire (Firebee) is now in production. You can order one from the Medusa Systems website. I was one of the first 25 to order one so I should get mine soon. Others will be able to get theirs in the second half of 2010. In the beginning, I never thought it would become a reality, but now it has.

*Google promises Pac-Man forever*
Pac-Man 30th anniversary doodle to become permanent
Ian Paul PCWorld.com

Due to overwhelming popularity, Google has announced that its interactive 30th anniversary Pac-Man doodle has earned a permanent spot on Google.com. From now on, whenever you need a Pac-Man fix just point your browser to Google.com/pacman and you can enjoy the search giant's version of this iconic video game any time you like.

While you've been able to find online versions of Pac-Man for years, Google users were thrilled to find a working version of the video game designed as Google's logo on Friday.

Google Pac-Man gameGoogle posted the homepage doodle in celebration of Pac-Man's 30th anniversary, and the game was only supposed to remain available for 48 hours. But enthusiastic user feedback to "Pac-Google" inspired the search giant to rethink its plans.

Numerous sites popped up offering free downloads of Google's Pac-Man for those who wanted to keep their own copy once Google took the game offline.

Twitter users cracked jokes about how Google had killed US productivity on Friday by putting the game (including all 256 levels) across the screens of millions of office workers. There were even suggestions that Google's JavaScript-based Pac-Man was a subtle jab at Apple CEO Steve Jobs.

When Namco and Midway games introduced Pac-Man to North America in 1980 it quickly became a fixture in American popular culture. Pac-Man inspired numerous video game spin-offs, board games, lunch boxes, a Saturday morning cartoon and several versions for home video game systems.

Despite the overwhelming user reaction to Google's 30th anniversary doodle, I have no doubt Pac-Man fever will start receding over the next few days. But never fear, once this version of Pac-Man is forgotten, I have no doubt it will live on as fodder for those always popular articles detailing Google's best Easter Eggs of all time.

LS

There is a new version available on my homepage (see sig).

Changes:

may 27 2010
v4
Editor:
Better placement of windows with tiling.

Compiler:
Finished 68020 compatible Coldfire target. (C only)
Long mod (%) done by hardware for 68020+ and Coldfire.
Fixed a bug in AHCCST concerning assigning a variable
to a bit field.
Forbid duplication of enum identifiers.

Linker:
'nm' list: addresses always in hex.

Library:
Fixed binding for vsl_ends; Some VDI's acces intout.
Changed binding for v_gtext; Intin array static.
Replies and setting of errno same as Pure C lib.

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package # Architecture

aranym-0.9.9.linux.x86_64.rpm 379 AMD64
aranym-0.9.9.linux.ix86.rpm 555 ix86
aranym_0.9.9.linux.amd64.deb 95 AMD64
aranym_0.9.9.linux.i386.deb 226 i386
aranym-0.9.9-cygwin.zip 1686 i386
aranym-0.9.9-macosx.dmg 877 Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz 311 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1255), Windows (1686), Macintosh (877) = total 4129.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

I haven't tried AHCC much before yesterday. I thougt I would have
a go at compiling Newsie.

I am missing a few headers/libs but I spotted the V4 update and
installed it. Now it cannot find a lot of headers.

It is probably me doing something stupid.

# 5293. BMS-100 Hard Disk Interface - software?

Newsgroup: comp.sys.atari.st
Date: 2010-06-08 04:50:01 UTC
From: Steven Schweda <sms.antinode@gmail.com>
Message-ID: <1dabf506-f0ed-4f3f-8584-23d134adc53f@h13g2000yqm.googlegroups.com>
Source record: 1211

I'm trying to help a friend rehabilitate a long-stored
Atari 1024ST (F). The kit includes a Berkeley Microsystems
BMS-100 Hard Disk Interface, complete with a couple of
defective MFM (ST506) disks. My plan was to ignore the
Adaptec ACB-4000 card, and try it with an old (100MB) SCSI
disk. Sadly, we haven't found the floppy with the software
for the BMS-100. From the manual, I gather that it would
include such things as BMSINIT.PRG, INITCLK.PRG, INSTALL.PRG,
and SETCLK.PRG (and a sample BMSINIT.DAT, but I might be able
to fake that).

So, is this stuff available anywhere these days? Google
and I didn't find anything which looked helpful.

I never did much with one of these systems, and there
doesn't seem to be much useful software in our collection.
Are people still mailing floppies around, or is there some
simple way to get something from a computer with an Internet
connection onto one of these things? (Is there a Kermit or
something to use with the serial port? And how would I get
that loaded?)

Any pointers to useful info would be gratefully received.

# 5297. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2010-06-10 16:33:46 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4C1113EA.50805@atari.org>
Source record: 1215

Hi,

There's a 0.9.10 release of ARAnyM <http://aranym.org/>, so
the *miniPack* <http://eureka.atari.org/miniPack.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

And I might find this where, exactly? (And the BMS-100 is among this "most"?)

I did receive a BMS-100 software kit from a kind group reader (files dated 21-NOV-1985), and I managed to transfer the files to a DOS/FAT floppy (DD) which the Atari system could read. Sadly, BMSINIT.PRG (et al.) seem to be happy only when the BMS card is connected to the Adaptec ACB-4000 card, and it, in turn, is connected to an ST506-compatible disk drive. (Otherwise, the DMA device selection list is all grayed-out.) My supply of MFM disk drives is quite limited (and that of working ones even mode so), so I was hoping to connect a small (<=1GB) SCSI drive directly to the BMS card, eliminating the Adaptec card, but I have not been able to make this work.

Any additional wisdom (or pointers to same) would be welcome.

Just for completeness there are some more modern drivers available,
HDDRIVER. Info here:-

http://www.seimet.de/atari/en/hddriveroverview.html

And cbhd, info here:-

http://www.clausbrod.de/cgi-bin/view.pl/Atari/CBHD

I have a licensed copy of HDDRIVER its very good and support is excellent,
but the demo won't format a disk.
When I last messed I seem to recall I used CBHD to partition and format the
drive but needed HDDRIVER to reliably access it. However I thin CBHD has
since been updated.

Did the drive you tried have a parity disable link? Did you disable parity
on the drive?
From what I remember some of the older software has a disk parameter file
that may need tweaking for real scsi drives.

Sorry to "spam" , on further searching I note Roger Burrows who produce some
fine CD reader software mentions the BMS on his pages:-

http://www.anodynesoftware.com/e4/hardware.htm

So I assume the BMS can be used for normal SCSI CD's so I assume it works
with SCSI disks. He used to drop in here, but it might be worth e-mailing
```

hime to see if he has any info about specific setups.

It would be great to upload/publish them to the public so that everybody
else facing this problem in the future searching for a solution will
find not only "ha, I got it, thanks" but a download URL.

Did you try http://icd.com ? i format my megafile 20 mfm and my
megafile 60 RLL and my internal 700meg scsi on my atari megaSTE. i
have tried the same job but it only likes mfm drives.

Hi,

Do you know the conference that gave Nolan Bushnell at Google ?

<http://www.youtube.com/user/GoogleTechTalks#p/search/0/Xj8wDFMbBPQ>

This was 2009 January 29th, and I wonder if there's more recent
video talks. Nolan Bushnell was nominated 2010 April 19th to the
ATARI (Infogrames) board. There must be some materials about him
around, since his nomination. Someone knows ? He was invited to
Humanity Plus <http://www.hplussummit.com/speakers.html> and it
must remain something from June talks. That's interesting ...

ATARIstically yours =)

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 29 AMD64
aranym-0.9.10.linux.ix86.rpm 36 ix86
aranym_0.9.10.linux.amd64.deb 14 AMD64
aranym_0.9.10.linux.i386.deb 31 i386
aranym-0.9.10-cygwin.zip 221 i386
aranym-0.9.10-macosx.dmg 81 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 262 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (110), Windows (221), Macintosh (81) = total 674.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Message-ID: <4c30b38b$0$2984$ba4acef3@reader.news.orange.fr>
Source record: 1238
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

Yes I do.

> I'd like some advices for the installation, I have a Powerbook 520c with
> a working floppy unit.

The PowerBook should have a SCSI squared connector on the back side.

> But how can I copy file from my PC?

There's a kind of SCSI cable, squared at one side, and 50 pin SCSI at
the other end. This cable should allow you to connect a SCSI Iomega
drive, that is also available with the parallel or USB port on the
PC. You can transfer all the stuff with a ZIP drive from Mac to PC.

I hope it helps,

Regards,

That's what I found: a 30pins to DB25 converter to use the ZIP.
Wainting for it, I found some useful programs as:
- TransMAC
- Stuffit.

And yet, I copied some old games on the MAC, but I'll have to use the
ZIP to copy the MagicMAC emulator.

Can you precise how does it work for TOS files? Does it need a
partition? Or just a folder?

Guillaume.

Well done !

> Wainting for it, I found some useful programs as:
> - TransMAC
> - Stuffit.

The most useful for that is an extension called "PC Access" ...

> And yet, I copied some old games on the MAC, but I'll have to use
> the ZIP to copy the MagicMAC emulator.
>
> Can you precise how does it work for TOS files? Does it need a
> partition? Or just a folder?

With "PC Access", if the ZIP drive support is DOS formated, you
just have to copy any kind of PC or Mac files, from a system to
the other. Because TOS files are neither PC nor Mac formats, it
will be recognized without translation, on both PC and Mac, easy !

The main point is to copy files "ATARI as they are" on a FAT32
file system, that will be recognized with the two OSes. With
"PC Access" extension, the Macintosh is able to read DOS formated

ZIP. You should add the extension to the Finder. The DOS formated
ZIP is recognized under Windows. You have just to copy files, simply.

I hope it helps,

Regards,

Hello,

Here is a new page about the Powerbook 520c.
I tried MagicMAC on it, you can see photos, snapshots, etc...

http://gtello.pagesperso-orange.fr/pb520c_e.htm

Guillaume.

I'd say this is the video RAM.

>"frequency/x2/x4 (343S1108), so the processor gets its 50/25MHz."

No 50 MHz. The 040 doesn't use clock doubling for executing units.

>"Sure, on the TT, the MC68882 helps a lot! "

Sure? Really sure? To my knowledge a 68LC040 even when using FPU
emulation is roughly as fast as a 68882.

>"Replace the 68LC040 with a full 68040 to get the FPU instructions."

a) It is really hard to replace a SMD mounted CPU like the 68LC040
without damaging the logic board.
b) Which Atari programs besides benchmark and mandelbrot programs gain a
recognizable speed bump from a FPU? I know only a few like POVRAY. I'd
say that a hint would be nice, that a FPU is not needed for ~90% of all
Atari programs.

For the OpenGL test, I think the TT48MHz + 68882 is faster than a
68LC040 25MHz. (as the FPU is clocked at 48MHz on the TT+CaTTamaran).

> a) It is really hard to replace a SMD mounted CPU like the 68LC040

That's what I think too...

Sure, you're right, very few programs actually use the FPU. But... who
knows...!

Do you have data for this? Higher FPU clock speed doesn't necessarily
mean it's faster.

**********First test, arithmetic**********

Sure I have made some tests, the first one is arithmetic
(+,-,/,*,sqrt), I have compiled it with Pure C with 68020 option and, of
course, I don't use the FPU!!!
(source at the end of the mail named TESTREAL)

Arithmetic test (duration in seconds, 32000 iterations):

TT 68030 32MHz 9,39
TT 68030 48MHz 8,12
MagicMAC 68LC040 25MHz 5,01

This is to be compared with the FPU use made in assembler:
(Source at the end of the mail named FPU_TEST in Forth+Assembler)

TT + 68882 32 MHz 0,44
TT + 68882 48 MHz 0,40

Yeepa!!!
So, sure the 68040 is really faster than a 68030, even with a lower
clock it overpasses the 68030! But, it can't compare with the power of a
FPU unit.

**********Second test, scientific functions**********

The second one uses cosins, exponential, etc...
(Source at the end of the mail named TESTRL2)

Scientific test (duration in seconds, 5000 iterations):

TT 68030 32MHz 15,52
TT 68030 48MHz 13,30
MagicMAC 68LC040 25MHz 8,13

This is to be compared with the FPU use made in assembler:
(Source at the end of the mail named FPU_TEST in Forth+Assembler)

```
TT + 68882 32 MHz 0,40
TT + 68882 48 MHz 0,27

The same, no comparison... the FPU is really a great thing!

Guillaume.

**********TESTREAL*********
With 32000 iterations, results should be close to:
-1 670 603 994,438.... and 396,061 ...

#include "fcntl.h"
#include "stdio.h"
#include "math.h"

main()
{
int i,top;
double a,x;
unsigned char c;
printf("\nNombre d'iterations:");
scanf("%d",&top);
a=10.0;
x=1.0;
for (i=0;i<top;i++)
{
a+=x;
a/=x;
a-=x;
a*=x;
x+=0.0123456789;
a+=sqrt(x);
}
printf("\nResultat:%f %f",a,x);
c=getch();
}

**********TESTRL2**********
with 5000 iterations, results should be
11 549,666.... and 62,728 ....

#include "fcntl.h"
#include "stdio.h"
#include "math.h"

main()
{
int i,top;
double a,x;
unsigned char c;
printf("\nNombre d'iterations:");
scanf("%d",&top);
a=10.0;
x=1.0;
```

```
for (i=0;i<top;i++)
{
a+=cos(x)+sin(x)+tan(x)+log(x)+exp(-x);
x+=0.0123456789;
}
printf("\nResultat:%f %f",a,x);
c=getch();
}

# 5344. MP_STE update

Newsgroup: comp.sys.atari.st
Date: 2010-08-09 07:09:17 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4c5fa99d$0$5394$ba4acef3@reader.news.orange.fr>
Source record: 1112

Hi,

a new version of my video player for STE (2.91) is available.
Now, if the sound doesn't fit into memory, the program tries to lower the sound quality (stereo->mono, or frequency division) to play it. You can now view larger animations.

When converting a PC movie AVI/MOV to Atari FLM, a new dialog box appears allowing you to select the image rate you want from the original (from 1/8 to 8/8) and if you want to reduce sound.

This helps you adapt your FLM to your own configuration regarding the speed of your disk, the speed of your processor (8/16MHz), and your RAM.

Everything on this page:
http://gtello.pagesperso-orange.fr/mpste_e.htm

And, particularly, the new features:
http://gtello.pagesperso-orange.fr/mpste_e.htm#flmopt

You may know "GOODTIME.AVI" a musical clip that could be found on the Windows95 CD ROM some years ago. I could convert is succesfully to FLM with a good synchro.

Guillaume.

# 5348. Re: [ANN] Phoenix 5.5

Newsgroup: comp.sys.atari.st
Date: 2010-08-15 16:51:00 UTC
From: Gerhard_Stoll@b.maus.de
Message-ID: <201008151851.a33402@b.maus.de>
Source record: 1116

Hello,

I release the Version 5.5 from the database program Phoenix.

There is now an english version from the RSCs and the documentation. Thanks to
Peter A. West.

There is also italian version from the RSCs. Thanks to Mauro Brollo and
Lodovico Zanier.

Also a thanks to Sascha Uhlig for the new icons.

I make only some minor changes:
The Desginer will not crash if no printer is installed and the dialog "Table
info" looks better.
The Manager works better with SpeedoGDOS, but this s not tested very well.

Gerhard

The designer have a bug. He have problems we he wants to save the
"designer.inf" at the end of the program.

The archive on the homepage is uptodate.

Gerhard

# 5356. Adding tree view to Teradesk (and others)

Newsgroup: comp.sys.atari.st
Date: 2010-08-27 19:45:44 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <9616a$4c781664$4dfbcd24$18665@news.chello.nl>
Source record: 1124

I wiped the dust off a small utility called Explode! that I
once shipped with XaAES.

It interacts with the desktop via the AV server.

You can find it on my homepage (see sig)

--
Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org
A Home Cooked C compiler: AHCC; http://ahcc.atari.org

Welcome to Explode!

Explode is a small directory tree view utility for the Atari ST series
desktop computers and its offspring.

It can be used as a prg on multitasking environments or as a
accessory on single TOS. For use as a accessory, change suffix to ACC
and put the program in your boot drive. Then reboot.

On single TOS starting programs may not work, but I tested with Teradesk
and opening directories and files for the viewer worked.

Explode tries to locate a AV server which would mostly be a desktop
program. When a AV server is net yet loaded, Explode tries 5 times
with a 1 second interval. When a AV server can not be found,
Explode displays a alert box in which you can choose between
Quit, Retry or Without.
Without AV server Explode is still a usefull directory display routine.

If the environment variable AVSERVER is absent, Explode first
tries to find DESKOP, then tries to find MAGXDESK.

A nice aspect of Explode is that it always keeps its window as small
as possible exposing as much precious screen area as possible without
special action.

Explode defaults its window position to the lower left corner of the
sreen until the user has moved the window. This new position will be
used as the return position from then on.

Explode understands the AP_TERM message.

Mouse usage
===========
left click: explode or callapse directory.

right click: Directory: Send AV_OPENWIND to AV server.
Teradesk opens a directory window.
File: Send AV_STARPROG to AV server.
Teradesk performs expected action on the file based
based on its type or extension.

Drag and drop: Depends totally on the AV server implementation and the
receiver of the drop.
Drag on a window or the desktop background sends
AV_DRAG_ON_WINDOW to the server if there is one.
All other cases a standard DRAG&DROP protocoll is started.
I discovered that Teradesk converts a AV_DRAG_ON_WINDOW
message to a DRAG&DROP protocoll if a drop is on a window
not owned by Teradesk. Which is nice :-)

Keyboard usage
==============
Ctrl+Q, Ctrl+U Program: Quit
Accessory: Collapse all and close window.
ESC Collapse all.

Cursor right Explode directory and go to first sibling.
Curser left Collapse directory.
Cursor down Go to next line.
With only 3 fingers you can go quickly through
all the drives and directories of your system.
Cursor up Go to prvious line.

Shift + cursor right Go to next of parent directory.
Shift + cursor left Go to parent directory.

Shift cursor down Go half a page down.
Shift cursor up Go half a page up.

INS, UNDO explode or callapse directory.

Explode comes in 2 flavours:
explode.acc a 68000 version
explode.prg a Coldfire/68020 version

You can choose the processor version you need, move it to its
destination and then change its suffix to the one you need.

Have fun!

Henk Robbers

# 5359. New Atari Coldfire Video Demo

Newsgroup: comp.sys.atari.st
Date: 2010-08-28 11:16:48 UTC
From: "Edward S. Baiz Jr." <edbaizjr@comcast.net>
Message-ID: <_rGdnWMhEvS9beXRnZ2dnUVZ_oWdnZ2d@giganews.com>
Source record: 1127

Hello all,

There is a new demo video of the Atari Coldfire board
on the Coldfire website. It is not very long, but it
a nice one. Give it a look see. Boots realy fast. It
should be coming out soon hopefully.

# 5360. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st

Source record: 1128

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 47 AMD64
aranym-0.9.10.linux.ix86.rpm 54 ix86
aranym_0.9.10.linux.amd64.deb 36 AMD64
aranym_0.9.10.linux.i386.deb 74 i386
aranym-0.9.10-cygwin.zip 504 i386
aranym-0.9.10-macosx.dmg 238 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 600 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (211), Windows (504), Macintosh (238) = total 1553.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

[EXPLODE.PRG 15 EXPLODE] form_alert(defbutton = 2, string = ï¿½[2][
No AV server found ][Quit|Retry|Without]ï¿½)
-----------------------------cut-----------------------------

The environment variable is: AVSERVER=JINNEE

When I change this
-----------------------------cut-----------------------------
env = getenv("AVSERVER");
if (env)
/* [GS] Start */
{
int i;
char ZStr[10];

strcpy (ZStr, env );
i= (int) strlen (ZStr);
if ( i < 8 )
{
do
{
ZStr[i++] = ' ';
```

```
}while (i < 8 );
ZStr[i] = '\0';
}
av_id = appl_find(ZStr);
}
/* End; old:
av_id = appl_find(env);
*/
else
{
```
--------------------------------cut--------------------------------

Then find Explode the AV server.

Gerhard

From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <6e739$4c7aeba1$4dfbcd24$26916@news.chello.nl>
Source record: 1135

```
LS

A note to all users of AHCC.

AHCC implements the C99 _Bool type.
the identifiers false and true represent builtin truth values.

false coerces to zero when assigned to int.
true coerces to one when assigned to int.

AHCC implicitely defines the macro __bool_true_false_are_defined 1

advice:

#if __bool_true_false_are_defined
typedef _Bool bool, boolean;
#else
....
/* all private declarations of bool, boolean, true and false */
...
#endif

Hi,

You may all have heard about me on c.s.a.st and know the
Eureka 2.12 shareware that I've written for all ATARI machines.

At the same period I was writing Eureka 2.12 on ATARI, another
similar software "Graphing Calculator" was developed on Macintosh.
The amazing story of the Macintosh software really impressed me.

I strongly recommend the reading of the following article to
understand the hazardous ways of the software developments.

<http://www.pacifict.com/Story/>

ATARIstically yours =)

Oops, sorry. The video is not on the Coldfire website,
but it is on You-tube Just do a search using "Firebee".
I asked them to do a longer demo with much more of the
features being shown. I made some suggestions and \
hopefully they will do it.

# 5376. GEMDict 0.2 released

Newsgroup: comp.sys.atari.st
Date: 2010-09-12 09:05:38 UTC
From: J F Lemaire <jflemaire@skynet.be>
Message-ID: <4c8c985c$0$5296$ba620e4c@news.skynet.be>
Source record: 1144

```
This is GEMDict version 0.2

GEMDict is a graphical client for the DICT protocol, which allows querying
online dictionaries and retrieving definitions.

You can download it here: http://gemdict.org/download

Release Notes:

Requirements:
- MiNTnet
- Modern AES (min. version 4.1; only tested with XaAES)
- NVDI

New Features/Corrections:
- Sending of extended characters allowed (commands are proper UTF-8
sequences now, as per the DICT RFC). This makes the translation
dictionnaries much more useful.
- Extended characters can be added to the search field from a character
box called with the Insert key (as with the Thing desktop).
- Automatic connection/deconnection from the server. No need anymore to
quit the program after the server has closed the connection.
- 256 colour selection implemented in the colour selector.
- Fixed an awful amount of issues relating to the handling of the AV
protocol. Everything works now (global window cycling, directory window
updates, etc.) with some exceptions when the server is Teradesk (see
Known Issues below).
- Complete German version, including help guide and help bubble. This is
the work of Lars schmidbauer.
- English help guide completed, again the work of Lars.
- As a consequence of the above, the appropriate resource file and help
guide are loaded according to the language of the system.

Limitations:
- Display of extended characters only possible with the system font.
- "match" mode still barely useful.

Known Issues:
- Alt+letter keyboard shortcuts not always working in the configuration
dialog.
- The items in the Help menu do not work when Teradesk is the AV server.

Installation:
- None to speak of, apart from the "gemdict*.hyp" and "gemdict*.ref" files
that must go into the GUIDES folder.
```

It looks now like a Geocities-Site: overlapping content, nearly
unreadable, animated GIFs, bad contrast. Sorry to say, but it looks
horrible. Or is it ironic and I don't get it?

Irony is that site contains plethora of useful information.

Zoli, you should definitely redo it from scratch, even frame-based
version would be better than this. Also every-month-changing domain
address isn't very user friendly.

Source record: 1148

Oh, sorry - I did not test it on badly set MS Internet Explorer.
Anyone still uses that crap ? :-)

Anyway, I changed some things, so no more overlap should happen.
Animated GIFs stay :-)
Bad contrast was not there - really don't know on what crap you
browsing ? :-)
Do you talk about index page or generally ? What page has bad
contrast ?

Every month changing domain ? Folks, you really talk like spoiled
childs.
I was forced to start new site in April, when 07x.net suddenly
deleted all free hosted sites.
From that days content is on petari.000space.com . This
8bitchip.info for now goes parallel. And it is paid site. So, site
change was last time in April ... Really demotivating reading posts
like yours. With such attitude no wonder that Atari community is every
day smaller. I mean, some critic is welcome, but not like you do -
exaggering .

Most people do. I use Firefox and Opera and see the same as Gï¿½tz.
Text/links are partially overlapping icons/pictures.

That overlapping is intentional. Icon and text partially over it
links to same page.

I talked by overlapping Site news division by AdSense in case of MS
Internet Explorer - and I saw it only on one machine in public
library, not on mine.

I really don't get what some people has against little unusual
design, against animated GIFs ?
What I dislike is some rigid format, like 'military' ordered icons .

P.S. whole site content is 'overlapping' in some way. Many pages
contain partially same data as other one(s) :-)

The design of your site is what you want it to be!
No need to argue about that.
I use IE8 and it is clear and readable.

Talking about the contents: I found your site very interesting, I didn't know that some Atarians were still so productive on hardware. Do you plan to publish your work and not more, or to produce the items you are describing?

The section about game adaptation to run from HD is great too.

Guillaume/

Source record: 1152

Hi,

I just released v0.8 of my terminal emulator for FreeMiNT/XaAES. It's
still not a full-blown replacement to TosWin, but provided that I
didn't make any fatal bugs I think it's ready for everyday use :)

v0.8 introduces tons of changes, too many to list here.

Some notable changes are:
- fullscreen mode available on any hardware
- multiple windows
- umlauts and graphical characters work better now
- improved speed
- paste (not copy however, it's too boring to implement)
- VIDEL fullscreen mode is now configurable using Screens of Pain

As usual, you find it at xaaes.atari.org.

best regards

It looks that I like to argue :-) Especially when people talking not
true things :-)
Redesigned it again - now centered.

> Talking about the contents: I found your site very interesting, I
> didn't know that some Atarians were still so productive on hardware. Do

Most of projects there is for DIY enthusiasts.
Only CATA - cartridge port IDE adapter is planned for production and
sale.

> The section about game adaptation to run from HD is great too.
>

I working on some new things/solutions for it - but it goes slowly.
Some 'new' games are in plan too.

>
> (On pagehttp://atari.8bitchip.info/astide.php, the link "IDE Hard disk
> speed test doesn't work for me).

Correct, but that version is obsolete. Never versions contain all
tests.
Best to use GUI version : 'New Speed Test PRG' - accessible via
green
menu bar at top of most pages. http://atari.8bitchip.info/ahpt.html

Tested yesterday with CAB 2.8 & HighWire on FalCT60 96/25 MHz.
Displays fine on both browsers, though sometimes a page refuses to
display, but it will a few minutes later.
Very nice work.

# 5390. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-09-23 09:11:04 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4C9B19A8.6000605@atari.org>
Source record: 1158

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 59 AMD64
aranym-0.9.10.linux.ix86.rpm 63 ix86
aranym_0.9.10.linux.amd64.deb 37 AMD64
aranym_0.9.10.linux.i386.deb 100 i386
aranym-0.9.10-cygwin.zip 661 i386
aranym-0.9.10-macosx.dmg 329 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 779 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (259), Windows (661), Macintosh (329) = total 2028.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Any one out there. I was in the Local scene in the 8-bit and 16 bit
back in the late 80's and mid 90's.
I was know as Bone or Boner. Went to Buckskin BBS, Gateway BBS, Frog
and a few others.
Always happy to hear what happened to my few Atarians.

# 5401. Video Game Live

Newsgroup: comp.sys.atari.st
Date: 2010-10-05 05:37:56 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4caab9b5$0$7706$ba4acef3@reader.news.orange.fr>
Source record: 1169

Hi,

Have you heard of Video Game Live ? <http://www.videogameslive.com/>

<http://www.youtube.com/watch?v=_1hA7Gj3lg8Video>

Classical themes of video games are played with a symphonic orchestra.
This includes the first of all, of course, with Pong Game Live :-)

If you don't went to the live spectacle, there's CD / DVD / Blu-ray.

Great !

ATARIstically yours =)

Changes:

Compiler:
Further fixes for, and completion of Coldfire target.

Fixed a rare crash when compiling nnn.c when AHCC also
had open in a window a file nnn.s from the same folder.
It happened to me while I was rewriting nkcc.s into nkcc.c
:-)

Cdecl functions returning a pointer do so in both a0 and d0.

Assembler:
Accept ENDR after REPEAT.
Fix a memory leak in the 'ascii' opcode.

Library:
Set both variables _envp and __EnvStrPtr in ahcstart.c
Replaced getenv (gcc version) by getenv from dlibs.
Repaired enum HOURGLAS,BUSYBEE in sinclude\np_aes.h & aes.h
Removed a few leftover debugging printf's from AHCM

Shell:
Find multiple, Find in project:
Fixed line number counting for files with unix line endings.

Editor:
Window menu 'leave' behaviour changed. The menu is no longer
popped when left via the bottom of the menu.

# 5407. VIDEL PAL/NTSC

Newsgroup: comp.sys.atari.st
Date: 2010-10-09 09:15:47 UTC
From: Vincent Rivière <vincent.riviere@freesbee.fr>
Message-ID: <4cb032d1$0$5375$426a74cc@news.free.fr>
Source record: 1175

Hello.

I would like to know how the Falcon TOS 4.04 choses between 50 and 60 Hz
resolutions on RGB monitors. For example, if I switch to the ST-Low
resolution from the desktop, will it switch to 50 or 60 Hz mode ?

On ST TOS, the PAL/NTSC flag was hardcoded into the OS header in each
national TOS. But if I'm not wrong, there is only one international version
of Falcon TOS 4.04.
So on Falcon, does the PAL/NTSC settings come from the country code stored
in the NVRAM ?
What happens if the NVRAM is not initialized, it could lead to wrong
frequency and unusable display, then the user will be unable to switch to
the right mode...

And final question, do the PAL/NTSC settings have some importance on VGA
monitors ?

Thanks in advance.

Correct.

Yup.

I'd doubt it as the

The videl chip in the Falcon is completely programmable, its possible to
have all sorts of odd permutations. The defaults are set by the NVRAM
settings. If its set to UK or EU then it will default to 50hz or 60hz
for US.

Mark

# 5409. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-10-10 07:00:07 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4CB16477.8090808@atari.org>
Source record: 1177

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 62 AMD64
aranym-0.9.10.linux.ix86.rpm 69 ix86
aranym_0.9.10.linux.amd64.deb 37 AMD64
aranym_0.9.10.linux.i386.deb 126 i386
aranym-0.9.10-cygwin.zip 760 i386
aranym-0.9.10-macosx.dmg 382 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 830 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (294), Windows (760), Macintosh (382) = total 2266.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Interesting - my provider changed some servers with "no differences for
your account". Seems they messed up redirecting stuffs :(

In the mean time I tried to fix it by placing a dummy index.html inside
which will automatically load the real index.shtml.

Alternatively add /index.shtml to the URL.

cheers,
Matthias

Yes, I think that's the case. The NVCONFIG.CPX has a checkbox for
'PAL mode'. I presume that if that's not crossed the output will
be 60 Hz RGB.

>What happens if the NVRAM is not initialized, it could lead to wrong
>frequency and unusable display, then the user will be unable to switch to

Most modern monitors will give a readable display on either 50 or
60 Hz.

>And final question, do the PAL/NTSC settings have some importance on VGA
>monitors ?

I don't think so.

Regards, /Peter/

Bad answer. We are still here, still using Atari's, still supporting
Atari's, still seeing new software and hardware releases for Atari, in
fact, still loving Atari. :)

The very fact that you are having a conversation with *Atarians* should be
proof enough to refute your claim. Indeed, it validates us. :)

# 5419. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2010-10-12 14:30:47 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4cb47117$0$7687$ba4acef3@reader.news.orange.fr>
Source record: 1187
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

Have a good ATARI WEB Surfing =)

And us "Atarians" in Calgary still meet once a month for breakfast -
come to think of it, that's really a bit sad !

# 5424. Women are too stupid for designing programs or hardware for the ATARI ST!

Newsgroup: comp.sys.atari.st
Date: 2010-10-15 19:26:46 UTC
From: Tony Simsig <Aeon_warmth@yahoo.com>
Message-ID: <836aed89-efa5-4a88-88ba-4e3ec21ab3b8@37g2000prx.googlegroups.com>
Source record: 1192
Cross-posted to: comp.sys.atari.st,alt.misogyny

99% of hardware and software for the ATARI ST have been designed by men. That proves that women are too stupid for making anything for the ATARI ST computers and that they should not work with computers!

Women should stay at home and they should care for the kids and wash, clean and cook for their husbands. Men were made for operating computers, for coding, for working and for earning money.

Feminism is evil, we HAVE TO turn back time and we have to take it back. Women MUST NOT make careers, they have to be mothers and homemakers.

Come to alt.misogyny to talk about how evil feminism has made women and what we men can do to destroy that evil and to bring back the lovely housewives of the past.

Tony Simsig

I think all of us are. :)

Offtopic, but how is the ST video adapter coming?
Really looking forward to that. Thanks!

Hi,

Yesterday when I reprogramme the firmware in my EIFFEL The computer
crash, and I have to restart, after this Eiffel was not working. Is it
posibility to repair or completely dead ?

Best Regards
PIotrek

It may be possible to recover the chip in an external programmer. In any
case the PIC chip is very chip you just need to find some one close to you
with a programmer...

Hello Piotrek,

Maybe you can get it work again by plugging a joystick in the A port and
start the computer holding the fire button.

Regards,

J.-Luc

# 5439. AHCC V4,2

Newsgroup: comp.sys.atari.st
Date: 2010-10-29 22:14:10 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <d8698$4ccb47ca$4dfbcd24$16236@news.chello.nl>
Source record: 1007
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

```
LS

There is a new version available on my homepage (see sig).

Changes:

october 30 2010
v4.2

Compiler:
Removed error "bool not allowed".
Fixed a rare case where logical expressions with && or ||
including constants were not handled properly.
pe
if (VERSION == DEMO_VERSION && c < 0)
where upercase identifiers are constants and c is a variable.

Fixed wrong code for comparing a double to a integer constant.
Fixed assignments of the form a = b = c
where a and b are doubles.
Accept '=' with options -I, -D

Assembler:
Fix in preprocessor.
endif directive was not detected properly resulting
in "error 1 #endif missing".

implemented directives:
.extern, .ifne, .iff, .ifeq, .ifle, .iflt, .ifge, .ifgt

labels without ':' must begin at position 1 of a line.
This assures typos in opcode mnemonics are rejected.

Fixed 'wrong processor type' message.

Shell:
If AHCC cant find header files, setting maximum verbosity
will display in the journal which paths AHCC has tried.
(Maximum verbosity = all 4 v's in the KIT.)

Implemented project file option .S
.S options are passed when compiling assembler files.
(extension .S)
When the option is present it is passed to .S files only.
If absent, the .C options are passed to all source files
including .S files.
```

Editor:
Fix in detecting changes in files with Unix line endings
resulting in false positives when closing.
Undone changes were falsely reported as change.
Not dangerous but Annoying.

With option 'visible tabs' active, AHCC now also shows
trailing white space. Usefull when comparing files.
The small triangle is used.

When 'visible tab' is inactive, compare files (^2) no longer
takes trailing white space into account.

So, when 'compare folders' marks files as changed and ^2
doesnt find a change, you can be sure that its only trailing
space that is the difference.

# 5441. Kronos tests

Newsgroup: comp.sys.atari.st
Date: 2010-11-01 22:12:21 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4ccf3b48$0$7687$ba4acef3@reader.news.orange.fr>
Source record: 1009

Hi all,

I have started a page with Atari Benchmarks using Olivier Landemarre's
KRONOS.
A really cool piece of software that runs from the ST to Aranym on a new PC!

As it's the first day of thoses pages, there are few configurations
tested (mine!): a STE, a TT and a Mac Quadra using Magic Mac.

If some of you have some time, you can send me your benchs! The link to
Kronos 2.01 is on the page, just download, run all tests and save the
result in a text file (ABH extension). This one is to be returned to me
or to Olivier.

(my email address is valid).

Here is the link:
http://gtello.pagesperso-orange.fr/kronos.htm

(pages in french but there is little text to read and more graphics to
view!)

Especially wanted! Mega STE, Falcons (with or without accelerators),
Hades, Milan, TT with graphic cards, etc... If you own a particular
config (a ST with PAK030)...

Guillaume.

# 5442. Re: Kronos tests

Source record: 1018

Hello All,

There is a new external module for Calamus. It is called
High Rez Data. It takes data from a frame, page, or the whole
doc and puts it anywhere you want on your hard drive. This
is perfect for a computer like my 16meg Falcon. Now docs print
much faster (30-60 minutes for docs with lots of graphics, now
take about 3-5 minutes). Things will even get better when I get
the Coldfire FireBee. If any of you have Calamus, I would get
this module.

Falcon030 with 16meg of ram

The Fine Data Manager is not new. It's already on the market since some
time.
See <URL:http://www.calamus.net/modules/hdm.php?lan=en>

# 5454. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2010-11-11 10:18:16 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4CDBC2E8.8010208@atari.org>
Source record: 1022

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 73 AMD64
aranym-0.9.10.linux.ix86.rpm 79 ix86
aranym_0.9.10.linux.amd64.deb 45 AMD64
aranym_0.9.10.linux.i386.deb 157 i386
aranym-0.9.10-cygwin.zip 965 i386
aranym-0.9.10-macosx.dmg 485 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 880 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (354), Windows (965), Macintosh (485) = total 2684.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

Hi,

Here is an interview with Nolan Bushnell, member of the ATARI board

<http://news.cnet.com/8301-13772_3-20022604-52.html>

He is asked about the future of software, and thoughts about the firm.

That's interesting.

ATARIstically yours =)

It was interesting. I'm not sure I agree will all of Mr. Bushnell's
predictions, but it is still something to think about.

Amazing how naive geeks can be to think that the very things
everybody leaves behind everywhere could be a safe, theft free
identification.
Ones fingerprints

Hi Ron,

Just go to the Inverse website and go in under "Modules" and
then scroll down. You cannot miss it. The manual is
unfortunately in German, but there is an English explanation
which pretty much somes it up.

Hi,

Kronos benchmark page is updated with two new results:
Falcon with a FPU 68882
Milan 68040/25MHz

Comparisons between the Quadra/040 and the Milan is interesting. The
same for the two Falcons: one with a FPU and the second with a Speedres
card 40MHz.

http://gtello.pagesperso-orange.fr/kronos.htm

Guillaume.

Hi again,

The translation to english is done! Now you can view the pages with two
columns: french on the left and english on the right!

Please, see the "SOFTWARE" page, I need some people to make the two
tests with M_Player (everything in one archive, it's easy!).

And last, if some people could prepare a test, for example about:
- fractals calculations and display
- a "C" compilation
- a graphic filter to apply
- etc...

And prepare a ZIP archive with explanations, I would be able to add
their test on my page.

Thanks!

http://gtello.pagesperso-orange.fr/kronos.htm

Guillaume.

# 5467. AHCC V3.4

Newsgroup: comp.sys.atari.st
Date: 2010-11-28 22:06:29 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <14030$4cf2d30a$4dfbcd24$22012@news.chello.nl>
Source record: 1035
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

```
LS

There is a new version available on my homepage (see sig)

Changes:
november 28 2010
v4.3
Compiler:
Fixed wrong mode bits in Coldfire 'fmovem.d reglist,(A7)'.
Fixed typo in "unknown mnemonic" message.
Skip rest of line after above message.

Improved code for comparing bitfields to zero
and assigning constants to bitfields.
Replaced flagwords operated by |= resp. &=~ by
bitfield definitions.
For instance:
in stead of 'flag |= FLAGNAME resp. flag &= ~FLAGNAME',
now 'flag.flagname = 1 resp. flag.flagname = 0'
without increase of code.

Repaired warning 'value too big for field',
which was never issued due to a typo.
Also made sure the generated code conforms to Pure C
in this case.

The include folder can now be used by both Pure C and AHCC
in all case. The sinclude folder is only needed when
compiling AHCC* itself.

Assembler:
Implemented directives 'ifd' and 'ifnd' as synonyms
for 'ifdef' and 'ifndef'.

A expression of the form (label1 - label2) can only be
resolved when the labels are NOT advance references and
when the labels are in the same area (or module).

This might be repaired in the next release. It will
take some contemplation and time.

# 5469. fileselector problem with Magoc

Newsgroup: comp.sys.atari.st
Date: 2010-11-29 09:29:14 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4cf3726d$0$32469$ba4acef3@reader.news.orange.fr>
Source record: 1037

Hi,

I have a problem with the Fileselector and Magic (MAgicMAC in this case).

I want to return a mask as the filename: example IMG*.TGA for the
program to load the whole set of images.

With TOS, no problem, but with Magic the fileselector searches for the
first file matching the mask and returns IMG0000.TGA!! So my program
only sees one file and not the whole set.

How to do??

Guillaume.

Just went there, yep - sure what it looks like! lol

Oh wait, its "he's"...not "she's"...he's talking about some
rich guy his girlfriend left him for...

# 5478. [WEB] More Kronos results

Newsgroup: comp.sys.atari.st
Date: 2010-12-13 17:12:25 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d0653fa$0$5396$ba4acef3@reader.news.orange.fr>
Source record: 1046

Hi,

More Kronos results were sent to me, in particular a Milan 060/50MHz.

http://gtello.pagesperso-orange.fr/kronos.htm

If a Mega STE owner could spend some time on the two tests POV and
MP_STE that can be seen on the software page:

http://gtello.pagesperso-orange.fr/kronos_soft.htm

Thanks!

Guillaume.

Hi Ben! I don't have one. BUT, I checked Best Electronics Website today
and THIS might be your problem - a notice to people trying to contact
them via email. Could it be that you missed this notice?:

Electronic Mail:
Because of the big volume of Spam E-Mails we receive everyday, we had
to install E-Mail Spam filters on our server.ï¿½ When sending an E-Mail
to Best, Please put the word "Atari", Atari item or Atari part number,
Atari Question or Atari Sales inquiry in the Subject line.ï¿½ E-Mails
with the typical Spam subject matter like: Urgent, Must read,
Regarding, FWD, Blank subject line (RE:) or other SPAM E-Mail Subject
lines you receive, will be automatically deleted on our E-Mail Server
and never reach us.
After sending your E-Mail to us, if you do not hear back from us within
a day or less, please resend your E-Mail inquiry with a different
Subject matter information or from a different E-Mail address.ï¿½ We do
100% respond to every Atari E-Mail we receive.ï¿½ But sometimes Spam
Filters on your Internet provider server or your own personal E-Mail
Spam software filter you have installed may delete our E-Mail back to
you.

Hope this helps

Oh no! I hope they are just on Christmas vacation or something...

BTW Ben, here is my dictionary's definition of "irregardless":

irregardless |ˌiriˈgärdlis|
adjective & adverb informal
regardless.
ORIGIN early 20th cent.: probably a blend of irrespective and regardless .
USAGE Irregardless, with its illogical negative prefix, is widely
heard, perhaps arising under the influence of such perfectly correct
forms as : irrespective. Irregardless is avoided by careful users of
English. Use regardless to mean 'without regard or consideration for'
or 'nevertheless': : I go walking every day regardless of season or
weather.

# 5482. System Administrator (Distributed System) for Qatar

Newsgroup: comp.sys.atari.st
Date: 2010-12-16 07:28:24 UTC
From: vam <vinirma2008@yahoo.com>
Message-ID: <5bd80685-77b7-4cf6-a941-4da95f8d0fd3@h17g2000pre.googlegroups.com>

VINIRMA Consulting Pvt. Ltd. is a 360degree Human Resource Management Consulting and Staffing Services Organization with operations in UAE, Qatar, Bahrain, Australia, USA, Singapore & India.
VINIRMA Consulting is currently looking System Administrator (Distributed System) for one of our clients which is a leading Bank in Qatar with the following skill set and terms and conditions.
Education/Experience Requirements:
- Bachelor’s Degree in Computer Science.
- Minimum 3 years experience in financial services with a specialization in systems technical design, implementation and maintenance of main server systems relevant to the environment (Main frames, AS/400, Equation, Misys Applications, etc.).
- Training courses and certification in operating systems, security and applications support.

Responsibilities

A. Shareholder & Financial:
- Perform necessary system administration to support Distributed Systems operations and further the Group’s strategy.
B. Customer (Internal & External):
- Maintain relations with selected vendors for systems software, application, and hardware delivery and maintenance.
- Build and maintain strong and effective relationship with all other related departments and units to achieve the Group’s goals/ objectives.
- Provide timely and accurate information to the external and internal auditors and the Compliance function as and when required.
C. Internal (Processes, Products, Regulatory):
- Install, monitor and maintain the main servers systems and applications for Distributed Systems.
- Provide a reliable operating systems environment in order that the applications meet the required service levels.
- Prepare documentation for specific platforms’ procedures and guidelines for business continuity and contingency planning of the Group’s systems architecture within the overall contingency planning policy of the Group; and check daily outcomes.
- Prepare documentation for specific platforms’ procedures and guidelines for data and systems security of the Group’s main systems within the overall systems security policy of the Group; and check daily logs and exceptions.
- Monitor assigned main systems operating systems and application performance sizing and utilization.
- Provide automated and documented procedures in order to support simplification of data center operations activity for daily procedures

and synchronization of backup site.
- Provide automated and documented scripts for backup and retention of data on external storage within the backup and retention policy of each main system.
- Execute change management procedures with version and backtrack control
- Ensure timely resolution of operating systems and application failures on main systems.
- Report to the Head of Distributed Systems for approvals of work and prioritization of projects on hand.
- Confer with and seek guidance from the Senior System Administrator (Distributed System) in handling more complex jobs.
D. Learning & Knowledge:
- Possess in depth technical knowledge in operating systems of assigned main servers to provide a convenient platform for systems delivery, understanding the network and systems architecture to resolve any business disruption or inconvenience to the users that may critically impact the Group.
- Understand assigned systems' internals, architecture and limitations in deciding on methods of problem solving which may impact overall resource availability and time to deliver changes. Perform careful analysis to ensure congruence with the Group's long term planning and approved strategy.
- Be aware of systems security in application and system software to implement and monitor policy and ensure full protection of software and data from un-authorized access or disruption of services.
- Identify areas for professional development of self and act to enhance professional development.

Domain : Bank
Terms and conditions:
Joining time frame: 2 weeks (maximum 4 weeks)
The selected candidates shall be a direct employee of one of the leading banks in Qatar.
Should you be interested in this opportunity, please send your latest resume in MS Word format at the earliest at ambili.krishnan@vamsystems.com or call us +91-476 2681150.

# 5485. Surprising POV test

Newsgroup: comp.sys.atari.st
Date: 2010-12-19 23:28:02 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d0e9506$0$5407$ba4acef3@reader.news.orange.fr>
Source record: 1053

Hi,

I made the POV test on a CT60 that runs slower than on an Hades or Milan !!

They share the same processor (68060) but the CT60 is clocked at 95MHz,
much faster than the 60MHz Hades or 50MHz Milan.

What happens? Is there a library to load for faster FPU operations?

Here are the results of the POV test (in the middle of the page):

http://gtello.pagesperso-orange.fr/kronos_soft.htm

Can anyone help?

Guillaume.

Jozsi sent me his results for a 80MHz CT60 and he gets 16 seconds for
his POV test with the Radeon etc..

How can my machine (95MHz) spend 86 seconds on the same problem?

That's a mystery for now...

Guillaume.

The FPU-emulator is already installed by the CT60 firmware. Perhaps you
need to check your CT60-settings?

Something strange....

I renamed POV3.TTP to POV3.GTP and now it runs the test in 26 seconds
instead of 86....

Looks like the TTP managment takes some time..!!

Excepted for MagiC you not need program inside the AUTO folder for the
CT60. FPU 68881/2 emulation and unimplemented instuctions are added to
the TOS by the BOOT.

Inside the CT60CONF.CPX, boot / TOS, there are a popup with 4 choices of
setting for TOS Pexec and a cache 5 sec delais who disable caches when
the program start.

Didier.

Hi all

inspired from this case mode ( http://www.mini-itx.com/projects/atari800/
) i'd like to build my small barebone ( http://www.ixtenso.com/portal/de/product/2851
) into a Mega STe or TT Case. Does anyone has one to offer for a
small cash?

I'll take the postage to.

Thx
Bernd

Hi
Maybe they are busy... I ended up calling them but they guy told me
that my account was put on hold until the end of January because of
asking too many quotes. So I was like... what the hell... I'm not
buying from them anymore, so I told them to delete my account... I'm
doing fine without them. I had purchased stuff from him before, but he
claimed that the guys in the warehouse were complaining because of the
"excessive" amount of orders. I think only one guy works there... So
anyways... I can say that when they sent the stuff, they sent the
right things... but he was always so Prima donna ...

So who knows, if you are still in the same boat. I would recommend you
calling him... I'm sure you are not banned.
thanks

Bonnes fï¿½tes!!!!!! Joyeux Noel!!
Best wishes from France to everyone.
I became an Atarian 24 years ago...
But I remember having played "Pong" in Spain in 75 ou 76. At this time
it surely was an Atari machine even if I can't remember (I was 10 years
old...).

Guillaume.

# 5498. M_Player on Hades/Milan

Newsgroup: comp.sys.atari.st
Date: 2010-12-25 13:28:28 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d15f18d$0$5420$ba4acef3@reader.news.orange.fr>
Source record: 1066

Hello,

I think I lost one message, someone wrote to me that colors are not
correct in 16bits with M_Player on his machine. I can't remember who!!
But I remerber that it was an Hades or a Milan computer.

Can you mail me again?
I think I fixed up the bug.
I tested it with succes on FalconCT60, NOVA 15 and 16 bits and MagicMAC
16 bits.

If some of you own a Milan/Hades and would like to test in 16 bits (and
if you can in 24/32 bits and 256 colors to verify that I didn't touch
anything), the beta version can be found at the bottom of this page:

http://gtello.pagesperso-orange.fr/mplayere.htm

Thanks,

Guillaume.

# 5504. ASSEMBLE patch for CT60

Newsgroup: comp.sys.atari.st
Date: 2010-12-29 15:12:49 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d1b4ff3$0$5416$ba4acef3@reader.news.orange.fr>
Source record: 1072

Hi,

I patched ASSEMBLE (Brainstorm's assembler) to get it to run on the CT60.
There were two problems:

1) crash when assembling top file from the editor without the 5s options
of the CT60.
2) bad information dialog box with "Informations..." menu entry.

1) On my version, you don't get the crash anymore (I flush the caches
just after the PEXEC(3), for that I had to take some place in the error
messages to put my own instructions, the message "Obsolote preferences
file" doesn"t exist anymore).

2) I have disabled the Informations meny entry, so you can't clic it
anymore.

Fell free to ask for this patched version if you use ASSEMBLE...

Guillaume.

## 5505. www.sak.nu temporarily offline

Source record: 1074
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

ATARI Search Engine

Have a good ATARI WEB Surfing =)

Happy New Year to all Atarian.... May the new year bring plenty of
Atari hardware & software upgrades to you.

My dad told me that I spend over an hour at a shop selling Atari 8
bits.... when I was 10 years old.
But my very own Atari ST was 23 years ago, and it is still running
when I tried in back in Nov 2010 !!

I have found a version PD60.PRG that runs ont the CT60 but with
problems, the redraw is not correct. So the informations displayed are
not up to date when I trace a program. I have to reopen the CPU window
and then clic on the other windows to get them updated.
Strange..

Guillaume.

may be more files than stone :-)
If the Maya used files to make their calendar, they will not run out
of 2012 stones.

I tried the PD60.PRG and it works.
I was able to step through a simple test program.
The variables seems to change on my system as I step through the
program.
The program is just like a for loop to see the number changing... so
may be it is small so it works.

Also I have to revert to Videl mode with VI to give a bigger screen.
I used VDI copy mode as otherwise the user screen will crash the
program.

It does not like the radeon at all. Using radeon, the screen is black
but flashes of the windows can be seen.
The output to the user screen was OK, I had a form_alert and it came
out OK.
It seems that if I have overlapping windows on the debugger screen,
the window will be displayed but the positioning are all wrong.

Any way, thanks for pointing out the file. It works on Videl and it is
really much better than not having a debugger.

The fact is that I didn't try it on the Videl!

> It does not like the radeon at all. Using radeon, the screen is black
> but flashes of the windows can be seen.

I put "Memcopy" as video setting.
I can see the windows but the page displayed is not updated. When I trace a program I can see for a short while the pointer advancing but then, the old screen comes back. So a buffer with the correct image is really up to date but it's not the one that remains displayed. To get it, I use Ctrl+C to activate the CPU window and then I click on every other window to update it.

Rodolphe Czuba sent me sources for a debugger expected to run on his first project Phenix 060. The work is not finished and I'm not sure to understand everything in it. The source is written in a way that I'm not used to: library, modules, etc... I always program with a single file (M_Player is a single file source with 600kb of text but... compiled in 10 seconds on the TT).

Well... The name of this project was Centinel. It appears that it has interesting options like being able to be run from the AUTO folder and install itself in memory. Very useful for drivers etc...

Guillaume.

Thanks for this.
I tried the CPU window. It's almost the same as the overlapping window
trick.
But the Videl mode works better so I will use the Videl mode.

>

I was thinking about an SD or CF card instead of the hard disk to
reduce the noise.

Can you confirm that a IDE-CF adapter will work as a hard drive with
nothing else to do on the Falcon?

Are there performance differences between a CF and a HDD ?

Guillaume.

I replaced the 40GB 2.5" hard drive for a 4GB CF in my Falcon and it is working perfectly well with a low cost IDE-CF adapter (a couple of euros).

> Are there performance differences between a CF and a HDD ?

For me, not with the HDD it replaces, but that one was probably not that fast. You can see the performance of my CF card with the Kronos file I've sent you a few weeks ago.

Okay!
And are there tools on the PC to read/write to the CF?

Yes, I got it! Your CF is far better than my old IDE HD.
So, that's a good point.
Are there different CF cards? With better speed than others?

Well, I would suppose that if there are on the Atari, there must be on PCs
:-) But I haven't tried to read the card on another computer.

Why not, but I must be sure that the version I have is the common one!
I put my patched version for downlaod on my site assuming that it's not
a commercial software anymore and that I only give the editor (not the
assembler, nor the linker).

At then end of this page:

# 5530. Gemview 3.18 patch for CT60

Newsgroup: comp.sys.atari.st
Date: 2011-01-12 18:53:44 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d2df8be$0$32433$ba4acef3@reader.news.orange.fr>
Source record: 1098

Hi,

I patched Gemview 3.18 to make it run on the CT60 without the
5sec/Copyback option.
as this program works with modules, caches are not updated when they are
laoded, so executing them leads to an error.

I sent a mail to Dieter Fiebelkorn to know how to diffuse this patch
because the program remains shareware on his site.

(Why Gemview? Why do I stil use it instead of Zview or Vision? Because
it's the only one that displays correctly the RLE encoded TGA that I use
with M_Player.
Zview: doesn't manage the packed pixels when they override a line (that
is allowed by the TGA definition)
Vision: doesn't support the RLE compressed TGA!

Well...

Guillaume.

Thanks!
If Dieter doesn't answer, I think I can offer this patched version as
it remains shareware. I do not "crack" it.
I used the email: dieter aroba ce his name dot net. If someone knows
another way to reach him.

Guillaume.

Source record: 952

Hi again,

The patched version is on my page.
I'm afraid that, for those who have a registered version, you'll find
again an unregistered one... I think I used the place reserved for
registering infos to put my piece of code. That is to be verified.
(is the shareware limitation only the delay you have to wait at start??)

My version only works on a 68040/060 as there was not enough place to
make a routine that reads the "_CPU" cookie and that validates my patch
only if it's higher than a 68030.

You can have both versions on your computer GV_060.APP and keep the
other GEMVIEW.APP for example when you use the Falcon mode again.

# 5545. Calamus & others and CT60 patch

Newsgroup: comp.sys.atari.st
Date: 2011-01-19 17:23:25 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d371e10$0$32466$ba4acef3@reader.news.orange.fr>
Source record: 963

Hi again,

Here are two more things:

1) I disassembled and rewrote a part of NOVACAL (the screen driver for Calamus originally for NOVA graphic cards). It was mostly necessary when running in 16 bits mode on the CT60+CTPCI because there, Calamus used to display weird things.
So, Calamus can now run on every 16 bits mode (either 15 or 16 bits used) and every endian (Big or Little).
NOVACAL can also be used in 24 or 32 bits if the encoding is not the Calamus native one.

2) Once NOVACAL ready, I experienced problems with Calamus at startup when loading modules, always the same problem with the instruction cache not updated. I was about to patch Calamus when the idea of a universal launcher came: I called it RUNME1ST.

With it, you can run any program and it flushes the caches each time a file is loaded by the program (supposing it can be an executable module). I added a delay option: after this delay, the caches are not modified anymore (better performances) supposing that modules are generaly loaded at start.

Well, it's the same idea as the "5s" delay with the CPX CT60 but it only slows one program when this one loads one file, and not the whole system.

I'll add this tonight on my page.

Guillaume.

I sold my ST after I bought my Amiga and never looked back but that was
years ago. I still have a few Amiga's, and if I ever came across an Atari 8
bitter I would snap it up. They're pretty rare around here though.
If I ever saw another STfm it would be too soon...

I've had, in order, an A1000, an A2000, and 2, yep 2 A1200s. Bought them, played with them, sold them. Of them all I actually liked the A1000 best, especially with that recessed keyboard and incase signatures of the original team.

I still have all my Atari's. 1 Lynx, 1 Jaguar, 1 800XL, 1 Mega ST4, 1 Mega STe, 1 STacy, and one CT60'd Falcon. They are all keepers. One man's garbage is another man's treasure and all that I guess. :)

Message-ID: <4d3ab6f0$0$7706$ba4acef3@reader.news.orange.fr>
Source record: 968

I wrote that GEMVIEW could be launched by Runme1st with the Delay
option. That's false as GEMVIEW reloads its modules each time they are
needed. So the patch can't be stopped after a few seconds.

You can still use Runme1st with no delay...

Anymay, I rewrote the GEMVIEW patch with Lonny's idea: now it doesn't
recover the registering infos anymore.

Hi,

I am working on PD60 sources from a disassembly I made.
Everything seem to be fixed now, I can assemble and the executable runs.

Some jump tables remain with absolute offsets, but well, that's a
starting point.

Can someone work on it to fix those redraw problems on CTPCI ????

Guillaume.

Let's not get into this. This is old crap. If I wanted an
Amiga, I would have bought one. I own two Falcon's, a Ste
and about 5 ST's. I have no intention of ever getting rid
of any of them even afer I get the new Coldfire Atari. So
Lloyd, take a hike....

Hi,

there are still people like Tony Simsig who think that women are too
stupid to program software for computers and to prove him and other
men who think so wrong, I've created the group "ATARI Girls":

http://groups.google.com/group/atari-girls

This is a group where female programmers can show their programs,
tools and games.

Men may also join, but I don't want guys like Mr.Simsig on the group,
since I hate flame-wars.

On the group, girls may show what they're capable of. You can send
your code to atari-girls@googlegroups.com by email. You may also send
executable files and screenshots as email-attachments.

If you need more room, you can use other services for hosting your
data and you can then provide the links.

This is no dating group, so men, please do not approach girls.

And now, have fun,

ATARI Girl

If they say that, ask them who programmed one of the great games called
River Raid :-) You go girls, anybody can do it, just need effort

Should not be needed really if people were not so set in their ways I
suppose.
Personally, I've never seen why one would suggest any gender is better than
the other at programming, its just what you are interested in and grasping
concepts after all.

Maybe its just men who like playing with old stuff, or that might be seen
as daft!
Nostalgia ain't what it used to be.

# 5560. PD60 source code is ready

Newsgroup: comp.sys.atari.st
Date: 2011-01-26 13:19:40 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d401f71$0$7677$ba4acef3@reader.news.orange.fr>
Source record: 978

Hi,

I put the source code of PureDebugger 60 on my page (I made it with the excellent strange TTDigger V7).

I started commenting the LineA, AES and VDI calls. If someone wants to help finding the bug in the display with CT60+graphic card, he is REALLY welcome.

Few differences are to be noted between assemblers, I use ASSEMBLE with TEXT, DATA and BSS. I think that some other use ".TEXT", ".DATA" and ".BSS", this will be easy to adapt.

You'll find it in the Software section of this page:
http://gtello.pagesperso-orange.fr/falcon_e.htm

Guillaume.

Source record: 981

Guillaume Tello <houten.van@orange.fr> worte:

> Could it be that MagiC uses this trap???

I can not see that MagiC use this Trap, maybe an other program

Nothing about your problem. But if you use some Traps please tell this in some newsgroups, so that I can add this to tos.hyp[1]

An other thing, please use the XBRA method for change vectors:
http://toshyp.atari.org/en/003009.html

In assemble (example)

```
-------------------------------cut-------------------------------
DC.b 'XBRA'
DC.b 'RSVE' ; change to your ID
oldxbiosv: DC.l 0
t14_xbios: your new function
-------------------------------cut-------------------------------
```

Wiht this method can tools like SysInfo show what program are hooked in vectors.

An example from my Milan

```
-------------------------------cut-------------------------------
Adr Vektorname Programm-ID
---------------------------------
0070 AVI L4/VBlank NVDI
0084 Trap#1/GEMDOS DYJT->Trpp->EPro->CHN1
0088 Trap#2/AES+VDI MN3D->ICFS->Trpp->NVDI
00B4 Trap#13/BIOS Trpp->CHN1->RSVE
00B8 Trap#14/XBIOS Trpp->NVDI->EPro->CHN1->nTOS->RSVE
0114 STMFP/200 Hz SCKM->TREN
-------------------------------cut-------------------------------
```

I don't know if it helps you, but here can you find a patch program for the
PureC Debugger.

http://www.dimitri-junker.de/html/software__atari.html
(look to "Programming tools")

Hi, it looks like the user reported a false error. The problem came
from another thing. So this is solved.

> Nothing about your problem. But if you use some Traps please tell this in some
> newsgroups, so that I can add this to tos.hyp[1]

Okay, but the Trap is only used during the execution of Zero-X, it is
not resident.

> An other thing, please use the XBRA method for change vectors:
> http://toshyp.atari.org/en/003009.html

SUre that's better! I never did that but it's never too late!

Thanks!

Guillaume.

It is easy to find is Magic uses Trap #6, or any other: with Steem Debugger .

# 5568. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-01-30 14:30:27 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4D457603.6060109@atari.org>
Source record: 986

Hi,

ARAnyM v0.9.10 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> It is now updated because
there's a new 0.43 release of the GEM desktop TeraDesk included.
It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Hi,

I got in touch with one of the programmers of Zero-X.
We talked about the adaptation of the program to the CT60.
He is very pleased to know that the program is still in use and he tries
to find the sources to modifiy the program in two ways:
- the adaptation to the new graphic modes (16 bits and up)
- the use of the TT Ram

Nothing is done for now, we're just talking! But who knows...

Guillaume.

Like Fidel-Sebastian wrote, there is Manitor, but this need a mutitasking
system. I use it only with MagiC.

You need a GEM script interpereter (Scripter or GSExec) to control Manitor.

I should make a new release the 1.02 is very old.

SYS_MON also logs XHDI calls. And in combination with TEMPLMON you can
set breakpoints which are executed when a system call is executed.

From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4D4EA359.8010404@atari.org>
Source record: 802

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package # Architecture

aranym-0.9.10.linux.x86_64.rpm 96 AMD64
aranym-0.9.10.linux.ix86.rpm 80 ix86
aranym_0.9.10.linux.amd64.deb 51 AMD64
aranym_0.9.10.linux.i386.deb 222 i386
aranym-0.9.10-cygwin.zip 1534 i386
aranym-0.9.10-macosx.dmg 752 Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz 342 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (449), Windows (1534), Macintosh (752) = total 3077.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

# 5586. little system monitor for TOS

Newsgroup: comp.sys.atari.st
Date: 2011-02-08 18:16:55 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d51889d$0$7678$ba4acef3@reader.news.orange.fr>
Source record: 804

Hi,

I started writing a little monitor for TOS without the need of a script interpretor or multitasking.

I named it SYSREC (system record), and here are the features:
- it runs a program with its command line
- records every system call Gemdos/Bios/Xbios/VDI/AES/LineA (you can select what you want in this list)
- don't record other programs'calls 'in particular, doesn't record the VDI calls from the AES)
- recording can start immediately or after a Alt+Help key press
- a second Alt+Help stops recording and so on.. (record, stop)
- at the end you get two files:
* the first with the mem copy of the recorded codes
* the second, a text file with functions names

I'm working on it, adding the use of a SYSREC.INF file containing the settings, so you d'ont have to retype everything.

I'll put this on my page when it will be useable.

Another idea would be to keep track of the calling addresses displayed as an offset from the TEXT start. This would ease patching programs when they need some new features.

Guillaume.

As an example, here is the ouput for TSTSCR_E.PRG that tests the screen encoding:

```
GEMDOS(074/$04A) : Mshrink
AES (010/$00A) : appl_init
AES (077/$04D) : graf_handle
XBIOS (004/$004) : Getrez
VDI (100/$064) : v_opnvwk
VDI (102/$066) : vq_extnd
VDI (123/$07B) : v_hide_c
AES (100/$064) : wind_create
AES (051/$033) : form_dial
AES (101/$065) : wind_open
VDI (014/$00E) : vs_color
VDI (014/$00E) : vs_color
VDI (014/$00E) : vs_color
VDI (014/$00E) : vs_color
VDI (020/$014) : vsm_color
VDI (007/$007) : v_pmarker
```

```
VDI (020/$014) : vsm_color
VDI (007/$007) : v_pmarker
VDI (020/$014) : vsm_color
VDI (007/$007) : v_pmarker
VDI (020/$014) : vsm_color
VDI (007/$007) : v_pmarker
VDI (109/$06D) : vro_cpyfm
AES (102/$066) : wind_close
AES (103/$067) : wind_delete
AES (051/$033) : form_dial
VDI (122/$07A) : v_show_c
AES (052/$034) : form_alert
GEMDOS(060/$03C) : Fcreate
GEMDOS(064/$040) : Fwrite
GEMDOS(062/$03E) : Fclose
VDI (101/$065) : v_clsvwk
AES (019/$013) : appl_exit
GEMDOS(000/$000) : Pterm0
```

I will need some help for that:
What happens in this conditions?
SYS REC runs the program to monitor through PEXEC.
And, every trap from the program is redirected to SYSREC before it is executed.
Will this hang the system ??

Have I some flags to set? Some functions to call to share my code with the child program?

Guillaume.

# 5590. very compact code by DYNACORE//TSCC

Newsgroup: comp.sys.atari.st
Date: 2011-02-09 14:46:54 UTC
From: Diaboł <diabol0@onet.eu>
Message-ID: <iiu9cu$416$1@news.onet.pl>
Source record: 808

Hi!

I review .st floppy images using hex editor and in some I have found the following text (almost at the beginning of the .st file):

"very compact code by DYNACORE//TSCC"

I wonder if somebody know what program leaves such a message. Is it a copier, av?

Thanks

No, it's probably a simple
dc.b "....",0 statement, included in the bootsector code. Maybe some
demo or loader.

Matthias

I don't think that women are too stupid to program, but I am curious as
to how they manage to do it all the way from the kitchen.

From that description, it could definitely work. Make sure to set the executable flags in the header of the binary to "Super", to ensure that it runs in the same memory space as the kernel. Unless you're using something like PEXEC mode 106, I think the child will share memory with the parent.

Can't be worse than mine :)

Anyway - it's awesome that you release the source code. If there are
any problems with memory protection, it can be fixed.

I don't think so, because a Windows version still exists and they want
to protect the algorithms they created to manage sound files (effect,
etc..).
That's what they said to me. And I can understand.

Too bad...

Guillaume.

Okay, that looks easy.
Will you be able to make some testing?
I didn't finish yest, but it won't take long now.

Guillaume.

I stopped expecting to earn a living with Atari software long time
ago..! So why not share the source code?
The shareware experience with M_Player/MP_STE was a cool moment and it
really helped adapting the software to many configurations and many
video formats.

If there are
> any problems with memory protection, it can be fixed.

Great.

I don't use Mint, but if it could be useful for others with a little
work, this is worth it.
Guillaume.

I'm assuming that these Atari Girls will be using XLs... You know, so
that they match the wedding dress, stove, and washing machine.

I don't understand. Most of the XL's that I have seen were black, no?

Bill

Yeah, even I'll admit that that one was a stretch. I was going for the white part of the XL matching the usual color of the dress and appliances, but it didn't really work.

So here's something I didn't expect to find on Amazon instead: http://www.amazon.com/Atari-1010-Program-Recorder/dp/B001VO7WDC .

Cassette lore: I remember one of the criteria for what was a serious or modern computer was: If it ever had a cassette interface it couldn't be modern. By that definition the IBM PC which came stock with a cassette interface was classified as previous generation.

I loved my Atari cassette! My first was one of the GE types but I picked up a bunch of 1010s after that. I was doing a lot of programing for other people which meant me doing M/L programs for them to call from BASIC mostly. I must of stepped on DOS a 1000 times rendering it incapable of saving my work. Heck, couldn't even load a utility to step through memory.

Before I got Omnimon and developed better programming practices, like save before you run or compile, the cassettes saved my bacon dozens of times. I can remember getting in arguments with ROM vs. loadable binary for DOS mainly on my experience with how when everything else went south on an Atari you could always count on the ROM cassette routines to still be there after an errant pointer.

Just my op but every computer should have a routine in ROM that is bullet proof. Just something that comes in maybe as an interrupt and watches for a key combination. It would only need to be big enough to write out a memory snap shot so you could figure out what happened.

Rick

Most of the case was white. Only the keyboard portion was black.

Source record: 829

Hi,

the little monitor is on my page, you can try it.
The version runs, no more. No beautiful interface, no error control for now.

It comes with docs in french/english, an example and source code.

In the table "THE PROGRAMS", line "System Recoder":
http://gtello.pagesperso-orange.fr/downld_e.htm

Works with TOS, with Mint, memory protection can be a problem...

Guillaume.

is this for me to understand ?
so you have a mini tron trace that writes to file
the gemdos bios and xbios

what about when users install there own traps for these routines are
they captured too?
raps
i know its not un-common to use some of motorolas other empty traps
for interupt use installing the same routine into new trap address

just a thought

charles

# 5617. 30 years ago

Newsgroup: comp.sys.atari.st
Date: 2011-02-14 19:35:30 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4d598402$0$32445$ba4acef3@reader.news.orange.fr>
Source record: 835

Hi,

Here is what I saw in the French "Le Monde.fr" news of 2001/01/05

*Back to the future - Children discovering floppy disks*

If you put todays children in front of the highest technology of
thirty years ago, it happens ... a big moment of misunderstanding !

<http://www.youtube.com/watch?v=gdSHeKfZG7c>

Thirty years ago, I was discovering the Sinclair ZX81 personal computer,
and programmed my first Breakout game, reading its assembly language
listings in the "Ordinateur Individuel" magazine. The faintest error
typing with the hexadecimal unreadable code, would conclude an
unrecoverable crash of the computer. And there was no backup at all
(I installed a backup tape recorder later). This is to tell that one
must have a prodigious self-control to obtain the racket and the
brick-wall above it.

The Breakout game is the creation of Steve Jobs and Steve Wozniak
when they worked for the ATARI Corporation leaded by Nolan Bushnell.

When I later changed in 1986 my first computer for a 1040STf, this
was a revolution ! Which one of us remember that we could program
with Lattice C, write with Signum, draw with Degas Elite, play with
Joust, listen music with ProTracker, model 3D shapes with Cyber Studio,
and we were all waiting the 720kb floppy disk from our magazines ?

30 years later, what makes the difference with the early computing ?

<http://eureka.atari.org/trenteans.jpg>

Are the social networks better than computer clubs happening before ?

ATARIstically yours =)

Bon Jour!

Nice Video. I wonder from where did he know how to scratch a turntable.

Anyway, it seemed that they know much more about the older stuff than I would have expected ;-)

> The Breakout game is the creation of Steve Jobs and Steve Wozniak
> when they worked for the ATARI Corporation leaded by Nolan Bushnell.

I can remember it, my brother was very fond of... maybe I was 6 or 7 then.

> 30 years later, what makes the difference with the early computing ?

Nothing. I am still using the ZX Spectrum and my ATARI 1040STf will see a few updates soon. Kaos TOS 1.04 and 2.5 or 4 MB of RAM. An ACSI-CF Adapter will follow afterwards :)

> Are the social networks better than computer clubs happening before ?

What social networks? ;-)

# 5621. AHCC V4.4

Newsgroup: comp.sys.atari.st
Date: 2011-02-17 14:37:48 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <3c05c$4d5d32de$18842070$1633@news.chello.nl>
Source record: 839
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

There is a new version available on my homepage (see sig)

Changes:
february 17 2011
v4.4

Compiler:
Fixed a bug in switch statements when a table is generated.
The problem only occurs in leaf functions (no further calls).
A argument register was not saved.
Fixed a regression where redeclarations of variables
were not anymore rejected.
Bitfields now also work with option -i (type int is 32 bits).
The fields are packed into a 32 bit word.
Code rearrangement such that (a##b##c) is now correctly
retokenized.

Assembler:
Fixed a regression where C style #if* directives were
handled incorrect resulting in strange error messages.
Fixed a regression where local labels within a module
were incorrectly matched to equally named local labels
in previous modules.
Implemented scope for dot prefixed labels.
(local between non dotted labels)
Labels within modules couldnt be exported. Fixed.

Library:
Added missing function 'ceil'
Added SozobonX gemfast replacement 'gemf.lib'
The lib is a wrapper around ahcc's gemlib.
New include files unistd.h, sys/stat.h, sys/types.h
These replace functions in ext.h and hence are
included by ext.h.
Fixed a bug in sleep(). The bug prevented sleep()
from sleeping.

Linker:
Removed redundant debug messages about doubly defined
names that could result in a crash.

--
Groeten; Regards.

Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org

> Works with TOS, with Mint, memory protection can be a problem...

Just tested with tstscr_f.prg and memory-protection: No problem.
No messing with auto-folder, additional helpers etc. I think it's usable.

Would it be possible to also output the parameters of the calls?

Is it possible to trace the VDI-calls from the builtin desktop?

-Helmut

Waow, good news!

> Would it be possible to also output the parameters of the calls?

Yes of course, but it would be a greater work.
If I have some energy, I'll try it.

> Is it possible to trace the VDI-calls from the builtin desktop

Supposing that VDI calls are made from AES calls, they all are done in
Supervisor mode, and if the AES is in ROM, then the calling address is
easy to identify.
Else, I think that the desktop has a VDI Handle of 1.

But... As there is no START or END of the desktop, when to save the files?

WIth a key combination such as Alt+Help to start/stop recording
and Shift + Alt + Help to save.

ANd SYSREC should be installed as a TSR to go on working with the desktop.

Well well... another idea for sure...

Guillaume.

Not THAT good any more: It works nearly perfectly when run from
commandline, but crashes my system when started by XaAES-launcher. But
cli-mode is sufficient for the start. But it does not read the sysrec.inf
when started from cli.

>

The handle of the physical workstation is 1, I guess the virtual has 2.

I imagine to start it from mint.cnf, set it up to trace a process called
"GEM", save e.g. VDI-calls (with parameters) to a file.

That's the answer I wanted to write !!!

From the AES, it should be installed as an application with its
directory as default to find SYSREC.INF.

This worked right away. The crash is not related to memory-prot, but to an old MiNT/XaAES-bug, so don't bother.

Now an option to start/stop at any time without launching another prog, maybe filter for callers adress or similar - I need the VDI-calls of the desktop!

Source record: 847

Hi

Not been in here for quite a few years.. and I still recognise some of
the names posting in here. :-)

I'm going through a much needed clear out right now and have the
following available.. I bought them all brand new way back then and
used them..

All software comes with the necessary manuals.

MagiC PC v1.2 with Ease
NVDI 5
Jinnee Desktop (no manuals because did not receive any)
Imagecopy 4

I also have:

The Atari Mega Archive CD - Volume 2 (looking at it last night, I had
forgotten my involvement in creating it - so was shocked to read my
name in the readme file ;-)

A CD of the full HENSA/Micros Atari archive from the mid-90s - self
compiled

The Atari A to Z encyclopedic book by Mark S Baines.

Any interest? Although I'm in the UK, I can post pretty much anywhere.

Regards
Denesh

# 5638. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-02-24 17:35:46 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4D6696F2.1010501@atari.org>
Source record: 906

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> It is now updated because
there's a new 0.9.11 version released. It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with both
Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 5642. New version 2.0 of NVRAM configuration tool BOOTCONF

Newsgroup: comp.sys.atari.st
Date: 2011-03-01 07:13:38 UTC
From: Uwe Seimet <Uwe.Seimet@seimet.de>
Message-ID: <8t3kl2F2mfU1@mid.individual.net>
Source record: 910

Hi,

the new version 2.0 of the TT/Falcon/Milan NVRAM configuration tool
BOOTCONF is now available. The main features remain the same, but the
GUI has been updated to use a more moderen look and feel.

BOOTCONF can be downloaded from

http://www.seimet.de/atari/en/index.html

Best regards

Uwe

# 5645. Hard Drive for Mega STE

Newsgroup: comp.sys.atari.st
Date: 2011-03-09 16:01:10 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d77a446$0$5415$ba4acef3@reader.news.orange.fr>
Source record: 913

Hello,

What settings are requeired for a SCSI hard drive to work with the
internal SCSI interface?

Bus?
Parity?
Termination?

Thanks!

Guillaume.

On 03/09/2011 05:01 PM, Guillaume Tello wrote:

> What settings are requeired for a SCSI hard drive to work with the
> internal SCSI interface?

You should keep these rules in mind for the ACSI/DMA bus of the Mega STE:

- The drive must not require initiator identification. Some drives
require the computer to have a SCSI ID of its own, but the Mega STE has
no full-featured SCSI bus (only ACSI/DMA) and does not provide this feature.
- You can only use 1 GByte of the drive's capacity, even if the drive
has a higher capacity.
- Parity should be switched off, the Mega STE does not support parity.
- The drive at the end of the SCSI chain must be terminated. An active
terminator is recommended.
- The cable to the drive should be short.

Best regards

Uwe

# 5654. gfx AlberTT on MegaSTE

Newsgroup: comp.sys.atari.st
Date: 2011-03-11 09:27:44 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d79eb11$0$5421$ba4acef3@reader.news.orange.fr>
Source record: 922

Hello,

I managed to put a AlberTT gfx card into a MegaSTE, I had to disassemble
the two drivers written by Draco to adapte them to the 68000 and STE.

Now it works!

I have a question with Magic: what should be the order of the drivers
and the magic-boot-loader in the Auto folder?

I made two photos to show the thing:
http://gtello.pagesperso-orange.fr/machin.htm

I'll upload later the drivers with commented source.
Is Draco still active? Can he be joined?

Guillaume.

Hi,

What program can perform a serial link between TT and MegaSTE using the
115200 baud rate?

I wasn't able to achieve this with ST Trans, even with the CPX
configuring the default port.

I don't need a network program, just a link to transfert files.

Guillaume;

Hi Guillaume

You can try with ParCoPy; MegaSTe <--> TT, over 65Kb/s.

It is with a special parallel cable, isn't it?
The problem is that the computers are far from each other (i am using a
15meters serial cable!).

Guillaume.

In such case, you'd better use the LAN-port, since the signal
integrity is much better for balanced transmissions.

Connect or other terminal programs can achieve what you're talking
about?

Well, it's certainly not dead, it's just atari.org still isn't updated
(I wrote to support and evil/dhs but seem to be busy) -- in the
meantime you can use mikro.naprvyraz.sk instead of mikro.atari.org

Thanks a lot. atari.org subdomain should follow your WEB site, if you
ask at the support mail service. I'm glad to know your new coordinates.

The FPU test was made before installing the FPU, and you can notice
that the Mega STE is faster than a Falcon!!!

Another Mystery!

Guillaume;

That's pretty impressive. I have a MegaSTE sitting on my desk, next to a Falcon to this day. :-)

It's now fixed. That's because I maintain the ATARI Search Engine.

<http://eureka.atari.org/atari.html>

Thanks,

Hi again,

I adapted:
- MP_STE the video player
- ColorTOS (Ronald Andersson and me) to get color icons and 3D effects
on the desktop.

Everything here:
http://gtello.pagesperso-orange.fr/mste_e.htm#soft

Guillaume.

Ho yes, thanks ! There's also

<http://www.sillyventure.pl/> SillyVenture 2k10

that is now back online, and really an impressive WEB site :-)
I guess that it is because SV2k10 is finished, and SV2k11 is coming.

I'm happy for that.

Best regards,

From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4d90ab21$0$32466$ba4acef3@reader.news.orange.fr>
Source record: 754
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

ATARI Search Engine

Have a good ATARI WEB Surfing =)

# 5687. [WEB] FPU results in FORTH on the Mega STE

Newsgroup: comp.sys.atari.st
Date: 2011-03-30 14:43:22 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4d93418f$0$5419$ba4acef3@reader.news.orange.fr>
Source record: 755

Hi all,

I added the support for the FPU when present in a Mega STE in my FORTH
language.

Speed increase is fabulous! I have to say that the original maths
routines were written by my some years ago, so I did my best at this time.

Here are the results, FORTH STE section:
http://gtello.pagesperso-orange.fr/mste_e.htm#soft

Guillaume.

I think you have to specify, either for the TT or the Falcon, another
ID than 7.
By default, the computer is the 7th element in the chain.
So, one of your computers must be ID6 for example, the other ID7 and
ID0 through ID5 for the peripherials.

But I'm not a specialist!!!

Guillaume.

This should work as long as you ensure that all of your device drivers
support bus arbitration (initiator identification is not sufficient, you
definitely need bus arbitration) and that both computers have different
SCSI IDs.
You also have to ensure proper termination, which might not be so easy
if the Falcon or TT are switched off.

# 5696. [Local/Event] Atari Party 2011, June 11th in Davis, California

Newsgroup: comp.sys.atari.st
Date: 2011-04-05 18:01:56 UTC
From: bill@newbreedsoftware.com
Message-ID: <4d9b5914$0$10593$742ec2ed@news.sonic.net>
Source record: 764
Cross-posted to: rec.games.video.atari,comp.sys.atari.8bit,alt.atari-jaguar.discussion,alt.games.lynx,comp.sys.atari.st

Please help spread the word! The 3rd annual "Atari Party" in Davis, California has been scheduled for Saturday, June 11th, 2011, from 12pm-5pm.

http://www.newbreedsoftware.com/atariparty/2011/

Join other Atarians and the curious/nostalgic public for a day of video games on a variety of Atari systems: Pong, 2600, 5200, 7800, 400/800/XL/XE, ST/TT, Lynx and Jaguar, plus emulated arcade games on GameBoy Advance & PlayStation2.

We'll also be screening the documentary file "Once Upon Atari" during the event, and the 1984 spy-thriller-with-Atari-game "Cloak & Dagger" at the end of the event.

Finally, there'll be a free prize give-away where you could win anything from Atari-themed t-shirts and playing cards to actual Atari systems!

This event is completely free, and open to the public. (This includesd the movies and prize give-away! Yes: just show up, and you may walk away with an Atari 1200XL or Flashback 2+!)

Davis is located just west of Sacramento, along Interstate 80; about 1hr east of San Francisco.

Did you have HSMODA07 installed?
This allows 115Kbps easily.
I have this between my Falc & PC.
So your TT/MSTE should be no issue as they are 16MHz or faster.
Some details here -> http://phsw.110mb.com/nw-nullmodem.html

You can find it at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

> I cannot find it in Sourceforge dl.

That's because the latest ARAnyM 0.9.11 wasn't yet built for Gygwin.

If someone can build it and send the binaries to the ARAnyM's team,
this would be great, and helpful for the users.

Regards,

Ho yes. I can read in the Changelog, for ARAnyM 0.9.11 :

2010/07/17 - Patrice, contributed by Jean Conter
- Preliminary SCC emulation for serial port.

>> That's because the latest ARAnyM 0.9.11 wasn't yet built for Gygwin.

Hi all,

a new release of the hard disk tool DISKUS is available on

http://www.seimet.de/atari/en/index.html

In DISKUS 3.94 a minor bug related to displaying partition information
of DOS compatible media has been fixed.

(Note that DISKUS and its manual are only available in German.)

Best regards

Uwe

# 5708. Free: Atari 520ST system; pick up in Davis, CA

Newsgroup: comp.sys.atari.st
Date: 2011-04-11 17:30:49 UTC
From: bill@newbreedsoftware.com
Message-ID: <4da33ac9$0$10539$742ec2ed@news.sonic.net>
Source record: 776

I was recently given an Atari 520ST system, which I looked over and
decided I don't really have any use for. (I'm more of an 8-bit guy :) )

I went through all of the floppies I received, and took out the ones that
had personal information (resumes, essays, etc.) as best I could, and
gathered the following inventory:

Hardware:
---------
Atari 520ST (w/ power adapter)
STM1 mouse
SF314 3.5" floppy drive (w/ power adapter w/ repaired cable, data cable)
SM124 monochrome monitor (w/ power cable, attached video cable)
Okidate Microline printer (w/ data cable)

Software: (on 3.5" floppies)
---------
TOS system disk (CA026061-001, (c) 1985)
Language disk (CA026062-001, (c) 1985) (x2)
DEGAS (BI 3-0512, (c) 1985)
ST Writer 1.07 (backup disk?)
ST BASIC (copied from backup disk)
Micro C-Shell
ST-Talk
"Various demos"
"Desk Accessories"
Back-up disks of misc above.
Disks that didn't work, so I formatted (x6)

Manuals and Books:
------------------
Atari 520ST Computer Owner's Manual
The Atari ST Companion
SF BASIC Sourcebook and Tutorial
DEGAS manual
Okidata Personal Printer User's Manual: Microline 92 and 93 Printers
COMPUTE!'s ST Programmer's Guide
Presenting the Atari SF: An in-depth look at the sensational new computer that promises to
bring you "Power without the Price"
Atari SM124 High-Resolution Monochrome Monitor Owner's Manual
Atari SF314 Microfloppy Disk Drive Double-Sided, Double-Density Owner's Manual
ST-Talk 1.0 manual
Atari ST Logo Addendum
Micro C-Shell Programmer's Manual
Micro C-Shell Tutorial

A Sourcebook for Atari Logo
Printed:
* ST-Talk User's Guide
* ST-Writer Manual: Tutorial
* ST-Writer Manual: Reference Guide
* ST-Writer Quick Reference

Accessories:
------------
Disk Bank floppy disk holder
Small disk holder
Various individual clear disk sleeves
Various unused disk label stickers
Small wooden stand
Small stack of tractor-fed US Letter (8.5"x11") paper

It's free to you if you come pick it up in Davis (near Sacramento).
I'm happy to hold onto it until the "Atari Party" event that I have
scheduled for June 11th here in Davis.
( http://www.newbreedsoftware.com/atariparty/2011/ )

Alternatively, I'm probably going to California Extreme in Santa Clara in
July, and could probably be convinced to bring it with me for a drop-off.
( http://caextreme.org/ )

Email me privately if you're interested! nbs@sonic.net

# 5711. Atari Jabber Network

Newsgroup: comp.sys.atari.st
Date: 2011-04-16 21:07:55 UTC
From: "ragnar76@googlemail.com" <ragnar76@googlemail.com>
Message-ID: <3d598592-0ef2-4afb-9c88-a5a3175eb433@w36g2000vbi.googlegroups.com>

Hi Atarians,

This should not be a usual commercial. I want you to know that we
( Frederick Meißner, the hoster of the Profibuch and myself ) have set
up a Jabber server for the Atari scene.

To be understood, right now, there is no native jabber client for
Atari!

For those running MiNT, MCabber ( http://mcabber.com/, the successor
of well known cabber ) might be pretty straightforward. Its a console
client using ncurses, like rhapsody IRC or pico editor. Another
workaround to connect to Jabber with your Atari, called BitlBee
( http://www.bitlbee.org ). This is a software that acts as gateway
between IRC and Jabber (and other IM protocols). You connect via aIRC
to it, and have a room with your online buddys in.

We also have talked to Joakim to implement the XMPP protokol to aICQ.
Another port could be Psi as a desktop client ( http://psi-im.org ).
Understatement, it will be a big task)

If you want a Jabber Domain with "Atari" in it, join us at
http://www.atari-jabber.org

bye
Bernd

## 5712. SuperVidel

Newsgroup: comp.sys.atari.st
Date: 2011-04-27 19:36:44 UTC
From: Atarinut365 <atarinut365@gmail.com>
Message-ID: <2962d459-f17e-4950-9aa9-dc72bf2630a5@q21g2000vbs.googlegroups.com>
Source record: 780

Just wondering how many Atari Falcon users in the U.S.A. plan on
buying the SuperVidel.
I was planning to until I went to xe.com and found out that 300 euro
(apprx price) comes out to nearly $450.00.
That's a bit rich for me. Can't even consider the Firebee, close to a
grand USD.

I've have upgraded my Falcon with the CT60 and the Ethernat, that's
about as much as I can afford....considering the U.S. economy these
days.

Thanks

I hear ya. I actually went so far as to sign up for the SuperVidel, then changed my mind after converting that price, and took my name back off the list.

With a mortgage, family of five, and my wife currently unemployed, its hard for me to justify that. :(

*IF* I did or do have the money anytime soon, its hard not to think how much more I'd be getting by going ahead, investing a bit more, and get the FireBee instead...

## 5720. The Firebee

Newsgroup: comp.sys.atari.st
Date: 2011-05-07 12:39:21 UTC
From: "Edward S. Baiz Jr." <edbaizjr@comcast.net>
Message-ID: <C4WdnbtJ97PkoFjQnZ2dnUVZ_t6dnZ2d@giganews.com>
Source record: 788

I, and others, are still waiting for the release of this Atari clone. I like using the Falcon, but it is nothing like what I will get when the Firebee comes outs. And of course it does not compare to what I had when my Hades060 was running. Still, it is better than nothing. If any of you have not checked out the Coldfire Project website, I would do so. Lots of nice things happening there. Try Youtube also.

Falcon030 with 16meg of ram

That does sound interesting and I also have the CT60 upgrade. I just have not installed it yet. I was thinking of going with the PCI upgrae, but I just may install it into my Falcon. I may get the SuperVidel. I will just have to wait to see what happens with the FireBee I have ordered.

# 5722. Upgrade the LISP at C++

Newsgroup: comp.sys.atari.st
Date: 2011-05-12 06:44:21 UTC
From: convert lisp to c++ <drgane2001@gmail.com>
Message-ID: <0bd9a2f2-cfd2-4c4d-ad87-d8eeec8c3d26@cu4g2000vbb.googlegroups.com>
Source record: 790

hi,,
Why upgrading the source in LISP, at the source C++LISP is more better
than only the source LISP ?

Because 1. the source C++LISP is hybrid language with LISP and C++

Because 2. suport the program bigger size

Because 3. the users can write directly the equations..math

Because4. Convert easy from C++LISP at Visual C++ObjectARX

Downloading the lisp-linker:
http://www.puiubrat.3x.ro/netilisp.exe

A few years back, when I bought a new Mega ST2 motherboard, Brad and his
tech(s) at Best Electronics upgraded it to a Mega ST4 before they sent it
to me. Might check with them.

```
New at the Belgian ftp-site kurobox.serveftp.net:3021
-------------------------------------------------------------

**********************************************************
* If a package should be corrupt, please contact *
* *
* nightowl AT scarlet DOT be *
* or *
* saka AT village DOT uunet DOT be *
* *
* so they can delete it and put a good version here *
* *
* Only with your cooperation this site can become good *
**********************************************************

**multitasking**
ftp://kurobox.serveftp.net:3021/multitasking/myaes/myaes094.zip
(611.640 bytes): Free, fast, reliable and modern AES

**utilities**
ftp://kurobox.serveftp.net:3021/utilities/xhdim111.zip
(6.395 bytes): XHDI_MON records any call
of the XHDI Interface. This way XHDI_MON helps
with debugging software using this software interface

ftp://kurobox.serveftp.net:3021/utilities/scsim121.zip
(7.293 bytes): SCSI_MON records any call of
the SCSI Driver. SCSI_MON helps with debugging
software using the SCSI software interface supported
by SCSIDRV, CBHD, HDDRIVER and the PCI SCSI driver for the Milan.

Have fun,
Martin

# 5739. K3DSurf to Eureka 2.12

Newsgroup: comp.sys.atari.st
Date: 2011-05-29 14:36:26 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4DE259EA.4070305@atari.org>
Source record: 857

```
Hi,

If one of yours is interested in 3D, and knows K3DSurf like me

<http://k3dsurf.sf.net/>

you may have noticed the following K3DSurf forum discussion
at <http://k3dsurf.s4.bizhat.com/viewtopic.php?t=145>

A K3DSurf user ask how he would describe the "Snail" surface
<http://www.3d-meier.de/tut3/Seite38.html> and the author
replies him (in English) how to do so.

With Eureka 2.12, in order to describe the "Snail Surface"
you just have to load the hereafter formula, which is the
equivalent Parametric 3D (rho,theta) surface

<CUT "snail.fmu">
Do not put more than 65 characters per line of formula !
"r*cos(t)*sin(r)"
""
"r*cos(t)*cos(r)"
""
"-r*sin(t)"
""
"K3DSurf formula"
""
""
""
""
""
_____________________ Optional _____________________
"0 2*pi"
"-pi pi"
""
"-10 10"
"-10 10"
"-10 10"
"44 11 5"
</CUT>

and you will obtain the following POV-Ray script exporting

<CUT "snail.pov">
// File exported by Eureka 2.12. Designed by Archimedium 2007
#version 3.1;
#declare Gold_Phong = texture {
```

```
pigment { color rgb <1.0,0.90,0.6> }

p4,n4
}
#end

#declare yy = yy+iy;
#end //inner loop
#declare xx = xx+ix;
#end //outer loop
translate <0,0,0>
```

```
scale 1.0/12.566370614
}

object {
eureka_eureka
no_shadow
texture { Gold_Phong }
rotate <0,36*clock,0>
}

//Lights, camera, action
camera
{ location < 0.8, 0.8, -0.8>
direction 1*z
look_at < 0, 0, 0>
}

light_source { < 0, 1, -1> color rgb 1 }
light_source { < 1, 1, -1> color rgb 1 }

object { box{-2,2 inverse} pigment{color rgb 0.9} }
</CUT>
```

You may then render this surface with a POV-Ray 36 images animation,
and clock (time in POV-Ray) varying in [0 to 5.0] time range.

You will obtain a kind of helix rotating around its axis like

<http://eureka.atari.org/snail.gif>

You may display it with zView with an ATARI, like that screenshot

<http://eureka.atari.org/snail.jpg>

Have you launched your ATARI and Eureka 2.12, today ?

ATARIstically yours =)

# 5748. Seattle Retro-Computing Society's inaugural meeting June 25th

Newsgroup: comp.sys.atari.st
Date: 2011-06-05 05:47:13 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <ffe3261f-1e3a-48fd-95ab-ce6dca401fad@glegroupsg2000goo.googlegroups.com>
Source record: 865

I am pleased to announce... the Seattle Retro-Computing Society's inaugural meeting, on Saturday, June 25th, 2011!

Do you do any of the following with old computers near Seattle?

+ Use them
+ Collect them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading this near Seattle, then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meeting is graciously hosted by the Living Computer Museum, a relatively new organization which is building a computer museum in Seattle's SODO neighborhood. There will be refreshments, presentations on various vintage topics of interest, and enough table space & power to set up anything you may want to show off!

For further details, please see our page at http://srcs.nfshost.com/.
Hope to see you there!

# 5749. Atari Falcon030 For Sale with extras

Newsgroup: comp.sys.atari.st
Date: 2011-06-06 23:49:43 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4ded6799$0$1953$bbae4d71@news.suddenlink.net>
Source record: 867

Greetings,

After updating my Studio, I have a very nice Atari Falcon 030 left over For Sale.

Anyone looking to purchase one should get in touch with me.

I can sell you a basic system, or with extra goodies.
Some of the extra hardware I have can be hard to find, so you can basically have the Falcon you want, depending on how much you want to spend.

I can provide photos of course, but please only respond if you are serious in
buying a Falcon.

Most people know about what a basic Falcon goes for on E-Bay if you can find one.

Original Box, disks, Manuals are included with a basic Falcon. And is very Clean!
I can supply new cables, memory upgrades, VideoMaster Falcon Cart., BlowUp hardware Screen Enhancer, Vidi ST12, Original Falcon Software, Original Atari CD Software, FalconSpeed 286 card with software and manual, And many other extras.

Get in touch with me at phantomm@suddenlink.net
I will provide a phone number so we can discuss it after sending me a e-mail. I'd like it to go to a good home.

Sincerely,
Barry
phantomm@suddenlink.net

# 5750. Atari Items for Sale

Newsgroup: comp.sys.atari.st
Date: 2011-06-07 00:24:33 UTC

Greetings,

Have various hardware and software for Atari ST/STe/Falcon for sale.

Things such as, Blitz Cable with software, Happy Discovery Cartridge,
Spectre GCR cartridge with software and manual, Vidi ST with Splitter
software and manuals, New Cables, SuperCharger with software and manual,

External Disk drives with new cable,

Hand Scanner like new in box with latest software and manual.
Notator Logic software package with the Emagic LOG 3 Cartridge and
C Lab UNITOR 2 cartridge.

Have a nice FlatBed Color Scanner with Software for excellent Color Scans.

Apex Media Software Package like new with Manual.

Also, have parts for an Atari STacy 4meg unit with harddrive.

And various parts for a Atari Falcon 030, such as 1meg, 4meg, 14meg Ram
boards,
2.5 internal IDE hard drive kit, motherboard shielding, Top and bottom case,
motherboard, Power Supply, internal disk drive and etc.

Looking for that special piece of hardware or software??
Just e-mail me what your looking for, as I may just have it.
Been collecting Atari related items for years.

Contact me at phantomm@suddenlink.net
Phone number will be provided for discuss of any items.

Sincerely,
Barry
phantomm@suddenlink.net

From: Ken Springer <wordworks@greeleynet.com>
Message-ID: <isr6ht$hci$1@dont-email.me>
Source record: 872

Haven't had any of my Atari computers running in over 5 years, I keep telling myself to get them set up, but life gets in the way.

Is is possible to install TOS in a virtual machine program? I have Parallels Desktop for the Mac installed, and have XP and Vista installed, working at getting Puppy Linux 5.25 running.

The recent post about ARAnyM got me to thinking about it. I've got some Atari software I would sure like to easily regain access to.

NO, you need an Atari emulator of which there a number. ARAnyM is but one...

For a general classification, let's call it productivity software. I'm not a gamer.

The one's that come to mind immediately are:

Calamus SL 98
Papyrus
InShape
DynaCADD

And others.

Of course, the ability to get it into a file I can save, print, export, etc. out of the emulator should be obvious. :-)

Obviously from the sig, I'd prefer it runs on a Mac. But, I do have a good XP/Vista dual boot machine here also.

I do miss the Atari days. :-(

> I do miss the Atari days. :-(

Do you know the following WEB site, and related applications ?

iCalamus <http://www.icalamus.net/icalamus/index.php?lan=en>
Papyrus OFFICE <http://www.rom-logicware.com/>
InShape III <http://inshape.lutece.net/>

The interesting thing in ARAnyM's use, is about softwares that you
won't get natively on your non-ATARI host machine. There's quite a
lot, apart from ATARI applications that were already ported elsewhere.

ATARIstically yours =)

Isn't that Darek Mihoka's (sp?) project? I've got an older PC version, I'd completely forgot about it. I think I looked at it one time, found it required technical knowledge to get it installed I don't have.

But I do have a Windows computer, I can always take another look at the current version.

But of course, the best thing would be to get the TT or Hades up and running! : grin :

I knew that Papyrus was available for the PC, I found it while searching for alternative PC office apps to MS Office. It was nice to know they were still alive and kicking.

I knew Calamus is was alive, but didn't know there was a Mac version.

Did not know about InShape.

Another program I just remembered is PhotoLine, which I have the Atari version of. And I know they are alive and kicking.

For right now, I'm not sure I have enough need for any of these programs to purchase new and current versions. I think my needs can be met with the Atari versions. And if I were to use the software in some sort of "serious" mode, I'd get one of my Atari computers running before purchasing anything new.

Thanks for the information on the ported versions, though. I'm glad there are some Atari developers that have survived. I do just about everything I can to avoid the mainstream software, such as Adobe and Microsoft. I like competition. :-)

Not compatible as I understand it, sorry. The Bus port is different
between it and the ST's.

Mark

It is a bit fiddley to get it working but for things like Calamus its great
because with the aid of some of the tools included you can use the entire
screen area of a PC monitor.

Not sure it is. Getting a TT going especially with a graphic card is a real
slog.

The Hades should be a simple matter of setting it up. :-) And the TT was working when I disconnected everything and took it down for the last move. But now, I have a black screen on bootup. Happened during a previous move too, and fiddling/wiggling the monitor cable fixed it. At the moment, I suspect an intermittent connection with the cable.

But it's a "time/space continuum" thing. I don't have much time, nor do I have much space to set them up in. LOL

Hi there,

I am looking for people in the San Antonio, TX area that are Atari ST/
STe/TT/Falcon users. I don't have mine with me currently, but I am a
big fan of the computers and wondering about knowing others that are
in the same interest as me.

# 5770. AHCC V4.5

Newsgroup: comp.sys.atari.st
Date: 2011-06-14 12:24:20 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <b3b13$4df75349$d52e2fcd$25265@news.chello.nl>
Source record: 888
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

```
LS

There is a new version available on my homepage (see sig).

Changes:

june 2011
v4.5
Compiler:
Fixed a regression since 4.4 causing a alignment error
when a bitfield was followed by a plain char declaration.

Optimization of table switch such that large gaps
between groups of close case values are dealt with
efficiently.

Correction in table switch for Coldfire code.
Index scaling by shift: long.
Promote unprototyped pushing of floats and ints.
Fix l and f postfix with float constants.

Assembler:
Digit zero is NOT a octal prefix in assembly files.

Implemented * operand.
Implemented 'dcb' statement.
'repeat' statement can now be nested.
Macros can have 'repeat' statements.
Repeat value can be any constant expression.
Repaired equ and = statements.

Library:
Added atan2 to ahccstd.lib
Moved a few local arrays in the VDI bindings to static.
Savess some stack when used in PROGDEF's.

Have fun.

:-) Everybody knows about iCab, of course ! <http://www.icab.de/>
The original name is Christal ATARI Browser by Alexander Clauss.
xnView is developed by Pierre Gougelet. I can't remember for Toki.

Best regards,

# 5778. Falcon030 DSP Devices

Newsgroup: comp.sys.atari.st
Date: 2011-06-16 16:25:34 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4dfa2e7f$0$1956$bbae4d71@news.suddenlink.net>
Source record: 896

Greetings,

Looking for any DSP hardware for Falcon030,
such as Analog 8, Jam Out, and or DSP device
for MusicCom 2 as described in the manual.

Also, in the market for Atari Falcon030 hardware
upgrades, internal digitisers,
Working EtherNet or similar HighSpeed Net Devices
for Atari Falcon030 and MegaSTe, that I can purchase
or trade for.

Also looking for overseas contacts for trading atari
related hardware and software. Also purchasing.

Will purchase atari related items from overseas.

contact me at phantomm@suddenlink.net
with list of items you have for sale or trade.

Also, if looking for any hardware/software include
your want list.

regards,
phantomm@suddenlink.net

## 5779. Amiga hardware boards in a Falcon??

Newsgroup: comp.sys.atari.st
Date: 2011-06-16 16:29:23 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4dfa2f63$0$1928$bbae4d71@news.suddenlink.net>
Source record: 897

Has anyone tried to use any Amiga hardware boards
in a Atari ST/STe/Falcon??

Such as Genlock boards and some of there other items?

To me it would seem that some things would just need
a driver written.

Any links/Web pages to any hardware hacks that have been done?

# 5780. Fwd: Photos from Atari Party 2011 in Davis, CA!

Newsgroup: comp.sys.atari.st
Date: 2011-06-16 21:07:38 UTC
From: bill@newbreedsoftware.com
Message-ID: <4dfa709a$0$2156$742ec2ed@news.sonic.net>
Source record: 898
Cross-posted to: rec.games.video.atari,alt.atari-jaguar.discussion,alt.games.lynx,alt.atari-jaguar,comp.sys.atari.st

Here are some photos from last Saturday's Atari Party, that I held
(with tons of help from friends) in Davis, California:

http://www.newbreedsoftware.com/atariparty/2011/photos/

It was mentioned ahead of time in a couple local papers
(Sacramento News & Review, The Davis Dirt, and I think also the
Davis Entperirse).

PLUS, a few of us got to hang out in CW31 TV's green room during that
morning's live broadcast of "Good Day Sacramento" to play games and
talk about the event. I got my butt kicked at Mario Bros. on live TV. :^P

Links to even more photos, plus the video, can be found under
the "Latest News" section of the 2011 event's home page:

http://www.newbreedsoftware.com/atariparty/2011/

Enjoy! And thanks to everyone who came to show off their game systems
and computers, the volunteers who helped us set things up and clean up
afterwards, and of course the many sponsors who helped pay for the event
and donated lots of give-aways.

BTW, we had over 100 people show up (based on raffle ticket counts, there
were at least 100 people; though we stopped giving them out when we did the
raffle, about 3.5hrs before the event ended, so it could've been closer
to 120 or 150, for all I know!)

I remember there were some buys trying to adapt Amiga 1200
accelerators to Falcon, but it turned not that easy at all. Hardware
is to different.

# 5788. AHCC V4.6

Newsgroup: comp.sys.atari.st
Date: 2011-06-24 14:36:51 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <b80e0$4e04a15d$d52e2fcd$3180@news.chello.nl>
Source record: 706
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

There is a new version available on my home page (see sig).

Changes:
june 24 2011
v4.6
Compiler:
Cast condition code to int on unary plus/minus to
comparisons. (think about it :-)
Also a fix in condition code casting for Coldfire.
Fixed a regression since V3.b4 where differences
between a function prototype and its actual declaration
were not error flagged anymore.

Assembler:
Coldfire instruction set completed. The set is complete,
but check for specific Coldfire restrictions on already existing
instructions is not performed yet. This will be done
in a future release. You can run the new Digger V8 on
object files for checking validity of your Coldfire code.

Library:
Created library ahccstfi.lib.
A standard library for Coldfire but without floating
point. Affects particularly printf and scanf.
For coldfire compatible programs not needing floating
point that one would like to run on a Falcon witout FPU.

Added functions _crystal() and vdi() and struct _VDIParBlk
for programs that submit extra bindings based on the
Pure C GEM library.

Have fun.

--
Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers

```
There is a new version of Digger (TT-Digger) available on
my home page (see sig).

Changes:

june 2011 v8

Coldfire support.
=================

Name abreviated to "Digger".

Fixed a bug in fmove.l #data, FPcr.
Fixed a bug with int set to size 4.

New menu entry in menu title Goto
'dc.w in text <d>'
Go to the next dc.w in the text segement.
It is about a dc.w due to disassembly failure,
not the result of a 'data' mark.

These 'dc.w's are displayed in bold red.

There are 2 binaries:
DIGGER.PRG 68000 versie: runs on every Atari or clone.
DIGGERCF.PRG 68020+ versie: runs on Falcon or higher and Firebee.

The soures of Digger are part of the AHCC distribution.

Hello Henk,

I tried to download the new version and the 020 compiler version gives
me a 404 error, file not found.

Best regards,
Matthias

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

ATARI Search Engine

Have a good ATARI WEB Surfing =)

# 5799. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-07-08 19:12:46 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4E1756AE.1070209@atari.org>
Source record: 717

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> It is now updated because
the <HELP> key is now available with <F11> on a Mac. It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Hi,

The *miniPack* <http://eureka.atari.org/miniPack.zip> was updated
with `aranym-jit` ARAnyM 0.9.11 for x86 GNU / Linux for PC machines.

Enjoy, it's yours =)

# 5807. Falcon 030: does it work without the timer IC?

Newsgroup: comp.sys.atari.st
Date: 2011-07-17 14:32:15 UTC
From: Frank Bergemann <FBergemann@web.de>
Message-ID: <d5518648-400d-47bf-a4e4-290e347445f0@fv14g2000vbb.googlegroups.com>
Source record: 725

Hi,

i try to replace the timer IC, which has a battery inside, that is
exhausted.
I could remove the old IC. But i still have to insert the new one.
But in between i wanted to check, if the Falcon is still alive.
But it doesn't show any boot screen.

Can someone confirm, that it just doesn't work without the timer IC?
Or should it do without? (Then i maybe damaged it).

- thanks!

rgds,
Frank

# 5808. Re: Falcon 030: does it work without the timer IC

Hello,

you cannot leave the IC out. The chip contains some NVRAM.
That stores more information than just the clock such as harddisk
configuration, boot language etc.

cheers,
Matthias

The clockchip of the Falcon also contains some non-volatile RAM in
which the machine stores some boot and configuration parameters.
Therefore it probably won't boot without the chip.

I suggest you solder a chipholder into the motherboard, so next
time you can replace the chip easily - that's what I did on mine.
This also makes it less likely that the chip will be damaged
during soldering. If you do this, you have to either discard the
shielding under the keyboard, or cut a hole in it for the clock
chip, since it will now sit too high for the shielding to fit over
it. I used a Dremmel-type sanding disc as a cutter, but it can be
done with a Stanley (or similar hobby) knife, though it takes a
*lot* of cuts to get through the mumetal. Alternativley, drill
holes at the corners of the rectangle to be removed and use a file
or sawblade.

Good luck!

Regards,

/Peter/

# 5810. OS X: Intel-native Atari ST emulator?

Hi.

I've been using NoSTalgia as my ST emulator on the Mac for a while now,
but it's PPC-only. With Lion about to turn up, that means it bites the
dust.

Is there a native Intel one anywhere? My hunts have come up short.

Cheers,
Ian

Hatari can be run on OS X and I think there are binary distributions
available. Otherwise you have to compile it yourself.

There was just a new release yesterday.
check http://hatari.berlios.de/

cheers,
Matthias

Excellent - thanks for that. I noticed 1.5.0 didn't have an OS X
binary, so I've compiled it myself. Small hassle with incompatible libz
files (it's looking for /usr/local/lib/libz.dylib, which is 32bit
whereas my system is 64bit), but a bit of editing the CMake output has
fixed that and I now have a 64 bit binary.

I'll play around a bit to make sure all is working as expected, and if
it is I'll contribute the binary back.

Cheers,
Ian

# 5816. Hades 060

Newsgroup: comp.sys.atari.st
Date: 2011-07-26 09:47:57 UTC
From: Piotrek <mietniow@agh.edu.pl>
Message-ID: <j0m2h0$ij0$1@news.agh.edu.pl>
Source record: 734

Hello All,

Since over a month I am happy owner of Hades, and I'm looking for people who can help me in configuring the equipment. I have several questions: 1. Which video card is better I have to choose PCI Mach 64 or ATI Rage Pro? And How can I check how much memory has on this card.

2 I do not know why but in hades that was used to working with Calamus, trying to run Papyrus 8 error appears four lines of numbers or something like this and returns to the system.

3 In the second hades where the Rage Pro card is no such problem, but unfortunately the physical replacement of these cards and copying partitions from one disk to the other is not helped. Averaged screen as if something was wrong as frequently.

Best Regards
Piotr

There are several Hades users over at the www.Atari-forum.com.
More likely ppl will see your posting over there.

Motherfucking lawyer!

# 5841. Videlity logo

Newsgroup: comp.sys.atari.st
Date: 2011-09-01 18:35:59 UTC
From: xlator@cix.compulink.co.uk
Message-ID: <KPWdnfWpX4kSTcLTnZ2dnUVZ8qOdnZ2d@giganews.com>
Source record: 659

I have Videlity installed on my Falcon, and it works well, giving me up to 832 * 624 pixel resolution on my LCD VGA monitor.

Priginally it displayed a Black Scorpion logo during booting, but it no longer does so, just a short stretch of black screen before the desktop comes up. Doesn't worry me particularly, as long as it isn't a forerunner of something else going wrong.

I assume the graphic comes from a ROM in the Videlity adaptor. Do these fade in time? And is there any easy way to revive them?

Regards, /Peter/

>the desktop comes up.

My fellow Cheshunt Computer Club member Mark Branson phoned me about this. He thinks the logo only comes up in the normal Atari screen resolutions, not any enhanced ones. Can anyone confirm this?

(Mark can't at present post here - he receives emails and can access usenet, but for some reason neither of his ISPs allows him to post at present. I've suggested he contacts them to see whether he has been blacklisted for some reason - like someone hijavcking his account address for spamming etc.)

Regards, /Peter/

# 5849. [Stats] ARAnyM

Newsgroup: comp.sys.atari.st
Date: 2011-09-11 12:41:09 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4E6CAC65.8030505@atari.org>
Source record: 667

Hi,

Here is statistics about ARAnyM 0.9.11 downloads, released 2011/02/06

Package # Architecture

aranym-0.9.11.linux.x86_64.rpm 43 AMD64
aranym-0.9.11.linux.ix86.rpm 48 ix86
aranym_0.9.11.linux.i386.deb 29 i386
aranym-0.9.11-macosx.dmg 95 Mac Universal (PPC/x86)
aranym-0.9.11.tar.gz 242 Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.11/>

i.e. GNU / Linux (120), Macintosh (95) = total 457.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =)

# 5850. Seattle Retro-computing Society monthly meeting Sat. Sept. 17th

Newsgroup: comp.sys.atari.st
Date: 2011-09-13 04:17:51 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <8b125e3f-5ba3-4661-8bdb-920a3ed510ea@u6g2000prc.googlegroups.com>
Source record: 668
Cross-posted to: comp.sys.amiga.misc,comp.sys.apple2.usergroups,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.cbm

Come one, come all, to the Seattle Retro-Computing Society's monthly
meeting, on Saturday, September 17th, 2011!

Do you do any of the following with old computers near Seattle?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading
this
near Seattle, then the SRCS is for you! We exist so you can show off
your awesome stuff, bounce ideas off of fellow enthusiasts, and be
inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, a
relatively new organization which is building a computer museum in
Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-
Free-Trade table, and enough table space & power to set up anything
you
may want to show off!

For further details, please see our newly improved web page at
http://www.seattleretrocomputing.com/ and our mailing list at
http://groups.google.com/group/seattle-retrocomp . Hope to see you
there!

(Please note, we usually meet on the fourth Saturday of each month; we
had to move it up a week this month because of schedule conflicts with
retrocomputing events in other cities.)

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

# 5855. Floppy disk formats

Newsgroup: comp.sys.atari.st
Date: 2011-09-23 19:31:46 UTC
From: Ken Springer <wordworks@greeleynet.com>
Message-ID: <j5imj1$6dj$1@dont-email.me>
Source record: 673

Maybe someone from Atariland knows or knows where the information is,
since we could read IBM/PC floppies...

When the 3.5 floppy first appeared, in the PC world, if you had the
right drive and the computer's BIOS supported it, you could format a
floppy to 3 densities, 720k, 1.2mb, and 1.44mb.

You also had disks formatted by Windows95 and after, plus some disks
that were IBM formatted.

I'm trying to find out the difference between the Windows format and the
IBM format.

Why? I need to upgrade the BIOS on an old Gateway computer, and the
instructions specify the floppy used *must* be an IBM formatted floppy.
If you use a Windows formatted floppy, the update will fail.

Anyone know/remember the difference?

So far, asking the right questions in the right places in the PC world,
and Googling and Ask.com, have not come up with the answer. :-(

The only thing I can think of is long file name support. Windows floppies
can have long file names as well as short ones ....

Apart from long file names the only other thing I can think of is that a
Windows/2000, XP or later disk isn't normally bootable, but it there is an
option to create a DOS boot disk in Explorer.

I think that's because the question doesn't make sense. Almost all "PC" and
"ST" floppies are formatted FAT 16

And both long and short names are still there.

True, but in the early versions of TOS, a floppy created by TOS cannot
be read by a PC until you manually change 2 bytes in the boot sector.
TOS wrote zeros, DOS and Windows put something else there. There were
more than one little utility that would make that change for you, and at

some point TOS was changed to write the correct values into those two bytes.

My unconfirmed thought is there is something similar to an IBM formatted diskette.

Can't you just format a floppy in the gateway,
format a: /s
from memory that creates a bootable floppy.

I could, but that wouldn't answer my question. :-)

I'd like to definitively find out the *exact* format of an IBM formatted
floppy, so I can be sure I've followed the BIOS instructions to the letter.

Hi Ken,

You can try this page for reference:

http://support.microsoft.com/kb/75131

Given that the "IBM" format is actually an MS-DOS format, I think
you're safe here. As you may know, early versions of TOS could read IBM
discs but not format them due to a difference in the number of FAT
entries. I seem to recall the ST wrote 5 and MS-DOS used 2...

Hope this helps...

Hi, Ari,

Thank for that link, I've bookmarked it. :-)

Have you seen it, in writing as part of an official type document, that the IBM format is simply an MS_DOS format disk?

I'm not saying it isn't, but with this very obviously obscure issue with this computer, I'm leaving nothing, absolutely nothing, to chance.

I was thinking the ST wrote a 0, but I don't really know. I know I always used a little utility to change the byte, and I'm thinking the utility came from Little Green Footballs.

Sure wish getting my TT and Hades back up and running would migrate faster to the top of the to do list! LOL

i know a little on the subject
its something like tracks multipled by sectors =bytes +bootsector or
something
i followed a basic listing along time agoi to write my own formatting
program

it also requires a filler byte to write to all the newily format
sectors.

it was in gfa basic and simply called format .lst if i remmeber
correctily

Hi Ken,

It's pretty well known in the old-school PC community that IBM disc format is the MS-DOS disc format as Microsoft licensed MS-DOS to IBM.

My first computer was a PCjr, which ran PC-DOS 2.1, which was nothing more than a re-branded version of MS-DOS. They differed only in some driver files, a handful of utilities and the version of BASIC bundled on them. IBM PCs could boot MS-DOS, etc.

All versions of the ST could read IBM / MS-DOS formatted discs assuming compatible hardware - e.g. a 720KB drive. The reverse was not true until TOS 1.4 due to the previously mentioned FAT differences. I remember buying packs of 3.5" floppies at school at were already formatted for IBMs and they worked fine.

Various utlities existed for the ST such as DC-Formatter and countless others that allowed STs running older versions of TOS to format compatible IBM / MS-DOS floppies.

What you couldn't do on an ST was format a bootable IBM floppy (FORMAT /S) since the boot loader was tied to the computer's OS and host architecture. Otherwise, they were fully interchangable.

Ari

# 5872. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2011-10-01 10:07:48 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.1110010305520.12606@slate.spiritone.com>
Source record: 690
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974.

I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Games/Software, Hardware/Accessories & Books/References!Atari Computers,8 Bit & ST Lines + Atari 2600/5200/7800, Jaguar & Lynx Games, Consoles & Hand Held! FREE Catalogs at http://BensCatalogs.Atari.org or http://BenSells.Atari.org Request Atari Catalogs by E-Mail at Atari@aracnet.com or BenSells@Atari.org & Please Specify Atari 8 Bit, ST, 2600/7800, 5200, Jaguar and/or Lynx! >/S) since the boot loader was tied to the computer's OS and host
>architecture. Otherwise, they were fully interchangable.

There is also an Atari program DISKMOD.TOS used with a 512-byte
file BLOCK0.DAT which writes a PC-type boot sector to any
80-track 9-sector disk without affecting any other data that may
be on the disk. The first few bytes are '4IBM 3.2' and near the
end there is the string 'IBMBIO COMIBMDOS COM', both of which
indicate that this is the IBM format.

As far as DOS is concerned, it's the first 3 bytes that matter.
i.e. 'EB 34 90' in hex.

The bootable floppies on both Ataris and PCs had the same start
bytes, followed by identifiers giving number of sides, tracks and
sectors, but then a small executable program in the rest of the
sector.

Regards, /Peter/

It was slow, but it loads up for me.

> Is There An E-Mail Address For Satan Disk?

Ultrasatan you mean?

Zaxon makes those still, I reckon. He's in this message thread at Atariage
(and he's at AtariForum as well I think):

http://www.atariage.com/forums/topic/160486-ultrasatan-next-20-batch-
preorder/page__st__75

and here is a direct link:

http://www.zaxon.eu/usatan.html

My advice is to get in touch with him directly before ordering.

Just for info, Jookie's site is still up:

http://joo.kie.sk/ultrasatan/

# 5891. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2011-10-15 14:44:25 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.1110150741400.26483@slate.spiritone.com>
Source record: 559
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974.

I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Games/Software, Hardware/Accessories & Books/References!Atari Computers,8 Bit & ST Lines + Atari 2600/5200/7800, Jaguar & Lynx Games, Consoles & Hand Held! It was slow, but it loads up for me.

> Is There An E-Mail Address For Satan Disk?

Ultrasatan you mean?

Zaxon makes those still, I reckon. He's in this message thread at Atariage
(and he's at AtariForum as well I think):

http://www.atariage.com/forums/topic/160486-ultrasatan-next-20-batch-
preorder/page__st__75

and here is a direct link:

http://www.zaxon.eu/usatan.html

My advice is to get in touch with him directly before ordering.

Just for info, Jookie's site is still up:

http://joo.kie.sk/ultrasatan/

# 5894. looking for Alexander Niemeyer

Newsgroup: comp.sys.atari.st
Date: 2011-10-22 12:11:20 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <4ea2b2e9$0$18816$ba4acef3@reader.news.orange.fr>
Source record: 562

Hi all,

I'm looking for Alexander Niemeyer, the author of "RIEMANN II" the
algebraic program for Atari.

I want to get in touch with him because I patched his program to make it
run on the Falcon/CT60. I'd like to put my version on my page and I need
the authorization.

Does someone know where can he be?
Thanks to all,

Guillaume.

# 5895. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-10-22 14:25:45 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4EA2D269.2040502@atari.org>
Source record: 563

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is updated with
today's EmuTOS 0.8.6 beta, thanks to Vincent Rivière . It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 5900. WANTED: ATARI MEGA ST4!

Newsgroup: comp.sys.atari.st
Date: 2011-10-23 12:29:20 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.1110230527250.9413@slate.spiritone.com>
Source record: 568
Cross-posted to: comp.sys.atari.st,pdx.forsale

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974.

I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Games/Software, Hardware/Accessories & Books/References!Atari Computers,8 Bit & ST Lines + Atari 2600/5200/7800, Jaguar & Lynx Games, Consoles & Hand Held! FREE Catalogs at http://BensCatalogs.Atari.org or http://BenSells.Atari.org Request Atari Catalogs by E-Mail at Atari@aracnet.com or BenSells@Atari.org & Please Specify Atari 8 Bit, ST, 2600/7800, 5200, Jaguar and/or Lynx! Hi Uwe,

Uwe Seimet writes :
> an updated version of HDDRIVER is available. Please refer to the
> HDDRIVER news page (http://www.seimet.de/atari/en/hddrivernews.html or
> http://www.seimet.de/atari/de/hddrivernews.html) for details.

Thanks a lot.

The miniPack <http://eureka.atari.org/miniPack.zip> was updated with
HDDriver 8.41 from <http://www.seimet.de/atari/fr/hddriver.html> :-)

I do appreciate your brilliant work, since a long time.

Best regards,

# 5913. EmuTOS 0.8.6 released

Newsgroup: comp.sys.atari.st
Date: 2011-11-08 22:33:42 UTC
From: Vincent Rivière <vincent.riviere@freesbee.fr>
Message-ID: <4eb9ae53$0$21859$426a74cc@news.free.fr>
Source record: 581

Dear Atari enthusiasts,

EmuTOS 0.8.6 has been released.

See the changes here:
https://sourceforge.net/news/?group_id=36560

And download your preferred binary archive here:
https://sourceforge.net/projects/emutos/files/emutos/0.8.6/

Enjoy!

# 5914. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-11-10 20:45:15 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4EBC37DB.8050104@atari.org>
Source record: 582

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is updated with
EmuTOS 0.8.6, thanks to Vincent Rivière . It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Hi,

*miniPack* <http://eureka.atari.org/miniPack.zip> was updated
with zView beta 8 <http://sourceforge.net/projects/z-tools/>
in a 68030+68881 build, thanks to the work of Miro Kropáček.

It really makes a difference, with speed and less bugs, indeed.

Please make your own opinion =)

Regards,

# 5917. Need really help - want to replace SCSI HD in MegaSTE - no clue why it doesn't work

Newsgroup: comp.sys.atari.st
Date: 2011-11-12 15:53:31 UTC
From: Peter Dassow <z80eu@arcor.de>
Message-ID: <4ebe9685$0$6642$9b4e6d93@newsspool2.arcor-online.net>
Source record: 585

Hi,

after several unsuccessful tries, I am clueless.
My Mega STE worked flawlessly with his ST157N, but it's one of the
smallest HD you can find (no more space now for anything).
So I tried it with a IBM DORS 32160 (SCA version, but I used an adapter
to SCSI-50pin). I didn't hear even the HD drive/motor (may be this drive
was already dead).
Now I buyed a IBM 0662 drive (1.0 GB SCSI, 50pin).
Because this beast have the maximum of jumper for configuration you can
imagine, I made an excerpt from the manual and upload it to my site.
You can take a look at it here: http://www.z80.eu/images/ibm0662.png
The red jumpers are my assumption what is necessary.
For the Mega STE, some told me, I should NOT use "active termination".
For classic ST's, this would be different (e.g. for MegaFile's).
At the moment, it does not work, HDDriver (or CBHD or AHDI 6) does not
recognize any drive except my also external connected Syquest 555 drive.

I am not aware of the sense of "Disable UNIT attention" here, also of
the jumper "Disable T.I.Sync Negotiations".
Also, I am not sure about "SCSI bus termination power" and the
additional "Termination Power enable" jumper (which should be related
with the "Enable Active Termination" jumper.

Any help (Mega STE specific) ?

Regards
Peter

This drive, like some other IBM drives, might require the computer to have a SCSI ID (initiator identification). If this is the case you can only use it with the full-featured SCSI bus of a TT or Falcon or with a LINK96/97 host adapter. These are the only host adapters for the ST/STE which support initiator identification (SCSI ID 7).

> I am not aware of the sense of "Disable UNIT attention" here, also of

You should disable both. Enabling unit attention can prevent the Atari from booting from a drive. The synchroneous transfer negotiation is not supported by ACSI. Only with a TT or Falcon and a driver with support for SCSI messages (like HDDRIVER and maybe CBHD) it can be enabled, even though you would not be able to profit from it with the Atari.

But anyway, provided your drive is not broken the lack of initiator identification with ACSI ist most likely the problem.

As I had texactly this drive inside my TT030, I can confirm it does
require the computer to have an SCSI ID. It did not boot in the TT030
with original ROM, one has to use a patched ROM, I used tp306v20.lzh and
tospatch.ttp, both which can be found on

<http://markusheiden.de/index.php/atari/tospatch.html>

These were the two modifications necessary:

;*****************************************************************************
;* MH:
;* Nur CRC-Check ausschalten.

It seems I have again no luck (second time, because I tried a DORS 32160
already). May be no IBM drive can be used with a Mega STE and the
build-in ASCI controller.
I have only set "disable parity" and "autostart", no SCSI-ID jumper set
(that should result in a SCSI-ID = 0).
The drive is not recognized.
Why did I buyed an IBM HD ?
Because I read the recommendations at
http://atari.mnx2010.nl/helpdesk/scsi/scsi.htm ...
This page is not related to a Mega STE, may be the list of "compatible"
drives is totally wrong :-(

Regards
Peter

Dear Peter,

Ask B & C ComputerVisions About This! The Mega STe Is Finicky About Hard Drives! I Dont Believe It Will Do SCSI 2 Internally! Maybe Externally With Another Hard Drive! I Asked B & C About This Before! I Prefer Another Host Adapter Than Atari!

At least it is outdated and it appears to be mainly meant for TT and Falcon.
On the other hand, as far as TT and Falcon are concerned such a list is
quite useless because you can use any SCSI-2/3 drive (except for the
differential drives, which have a special signal handling) with them,
i.e. there is no need for such a compatibility list.

The DCAS-34330 is easy to get and proven to work (some Mega STE owners
at the E-Jagfest had it installed), although you can only use 1 gig of
the 4 this drive provides.

Also, I had no problems with a Quantum LPS270S in my TT030.

HTH,

Thorsten

# 5929. AHCC V4.7

Newsgroup: comp.sys.atari.st
Date: 2011-11-13 22:22:05 UTC

LS

There is a new version available on my homepage (see sig)

I have included the A_... header files that belong to my
experimentation with syntax. (not activated)

Changes:
november 14 2011
v4.7
Compiler:
Slight reduction of spurious error messages.

Wrong code was generated when converting a real
to unsigned long.

New header file stdbool.h
small fixes in compiler.h

Fixed a error when a input name is a filename only, no slashes.

Fixed a mistake with eliminating the false side of a
expression of the form: constant ? x : y
where the true side is a binary operation.

For Coldfire:
Small fix in the new code tables for Coldfire.
Affects long mul/div.

Cleanup of Coldfire code generator.
Intruduction of code table for assignment.
Many fixes in the code for Coldfire floating point.

In rare cases the optimizer must split a move.
If no registers are available a pusher is generated.
(Until now a message "no free reg" was displayed in stead.)
Fixed a bug in a table causing some registers to be
kept alive forever, causing the above split.

Editor:
'_' is a alphanumeric character for bold display.

Kit:
Replaced checkbox 'word' by 3 radiobuttons:
whole word
word begin
anywhere

Which makes it possible to find a string that is the
beginning of a word. (e.g. prefixes).

Library:
gemf.lib
Fix a confusion in gemf.h
removed #define gl_apid _app
The 2 names have NOT the same meaning.

ahccgem.lib, ahccgemf.lib
Fix in appl_init regarding returning of application
identifier.

Have fun.

For sale, X3 Heavy Duty PSUs which will work with the following Atari machines:

. Atari 65XE
. Atari 130XE
. Atari 800XE

. Atari 600XL
. Atari 800XL

. Atari XE Game System

Being its amperage even far higher than the most power-hungry of the above Atari Home Computers, this Heavy Duty Power Supply will work flawlessy in every situation. This includes modded and/or expanded Atari machines.

Link: http://snipurl.com/2ox69c (Only few units available)

Cheers,
Oge

Yes, there is on the UK market e.g., but it's darn expensive (as it also
includes a DVD player):

# 5938. Seattle Retro-Computing Society meets Sat. Nov. 26th

Newsgroup: comp.sys.atari.st
Date: 2011-11-22 22:53:42 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <154aa950-a770-4c79-a35c-a395b3d744a6@d37g2000prg.googlegroups.com>

Come one, come all, to the Seattle Retro-Computing Society's monthly meeting, on Saturday, November 26th, 2011! You don't want to miss this one -- it's our last meeting until January 2012.

Do you do any of the following with old computers near Seattle?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading this
near Seattle, then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

Please note that, as it would fall on Christmas Eve and no one would attend, we will not be meeting in December. If you miss this meeting, you won't get to see everyone (and their nifty stuff) again until January.

The meetings are graciously hosted by the Living Computer Museum, which
is gradually fitting out a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you may want to show off!

For further details, please see our web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!

```
LS

There is a new version available on my home page (see sig)

Changes:

november 28 2011
v4.8
Compiler:
Fix a crash that sometimes could occur when a local
initializer was absent or was wrong.
Fix a crash when a while expression is wrong or absent.
Allow {} around any local initializer.

Deny arrays of void.
Deny returning of arrays.

Fixed a regression since 4.7 leading to incorrect code
in rare situations.

Fix a error preventing floating constants of the form:
nE-n from compiling correctly.

Coldfire:
Fix incorrect code when a temporary was needed
from a memory location.

Library:
Fixed a leftover from Sozobon, where a floating point
integral part could not exceed |2^31|.

Changed v_pie --> v_pieslice

Have fun

Hello Henk,

I hope "Deny arrays of void." does not included array of void functions,
or more precise arrays of pointers to functions with no return value.

Sometimes such function pointers can be very handy.

Best regards and thanks for your great work on AHCC!
Matthias

Hi Matthias.
Good question.

I discovered that denying of arrays of void was absent through a typo:

I think you will like this. :-)

Someone tried to define just an array of pointers to void functions.
It was wrong in a funny way.

```
void (*draw)(void)[] = foobar;
```

It should have been:

```
void (*draw[])(void) = foobar;
```

The first is: pointer to function returning array of void.
Two errors that are now properly denied.

The second one is OK as it was intended:
array of pointers to functions returning void.

That always has worked correctly.

Satisfied? :-)

C can sometimes look weird.

# 5947. Re: Need really help - want to replace SCSI HD in MegaSTE - no clue why it doesn't work

Newsgroup: comp.sys.atari.st
Date: 2011-11-30 23:50:38 UTC
From: Mark E <mark.earwood@btinternet.com>
Message-ID: <OtmdnW5eMPL3XEvTnZ2dnUVZ7omdnZ2d@bt.com>
Source record: 515

Hi Peter
I've had great success with Seagate drives,
specifically ST51080N. Loads of room and really quick.

Mark.

"Peter Dassow" wrote in message
news:4ebe9685$0$6642$9b4e6d93@newsspool2.arcor-online.net...

Hi,

after several unsuccessful tries, I am clueless.
My Mega STE worked flawlessly with his ST157N, but it's one of the
smallest HD you can find (no more space now for anything).
So I tried it with a IBM DORS 32160 (SCA version, but I used an adapter
to SCSI-50pin). I didn't hear even the HD drive/motor (may be this drive
was already dead).
Now I buyed a IBM 0662 drive (1.0 GB SCSI, 50pin).
Because this beast have the maximum of jumper for configuration you can
imagine, I made an excerpt from the manual and upload it to my site.
You can take a look at it here: http://www.z80.eu/images/ibm0662.png
The red jumpers are my assumption what is necessary.
For the Mega STE, some told me, I should NOT use "active termination".
For classic ST's, this would be different (e.g. for MegaFile's).
At the moment, it does not work, HDDriver (or CBHD or AHDI 6) does not
recognize any drive except my also external connected Syquest 555 drive.

I am not aware of the sense of "Disable UNIT attention" here, also of
the jumper "Disable T.I.Sync Negotiations".
Also, I am not sure about "SCSI bus termination power" and the
additional "Termination Power enable" jumper (which should be related
with the "Enable Active Termination" jumper.

Any help (Mega STE specific) ?

Regards
Peter

# 5950. PAK 68/3

Newsgroup: comp.sys.atari.st
Date: 2011-12-01 15:36:01 UTC
From: "Ronald J. Hall" <darklord@suddenlink.net>
Message-ID: <4ed79ee1$0$14718$bbae4d71@news.suddenlink.net>
Source record: 518

I recently picked up a used PAK 68/3 from Ebay. It did not come with any manuals or instructions. I was wondering if anyone could tell me where I could find English manuals or instructions and schematics. I've got a PDF but it is all in German. Also, is it possible to still get the FRAK board?

Thank you.

Source record: 519

Greetings everyone!

Lets start the Holidays off right!

At this time, The DarkForce BBS is resuming its monthly prize
giveaway.

Here is December's prize:

December 2011:
1. Atariuser Magazine - some lucky Atari caller will win a free
12 issue/1 year subscription to this great magazine (PDF).

Just telnet to "darkforce-bbs.dyndns.org"

The BBS software will automatically log your call, but please
go into the prize section and confirm that you want to be placed
into the random drawing.

Good luck to this months callers!

:)

PS Note that the winner will have to provide a valid e-mail
address for prize delivery.

Hi

Looking for some Atari Falcon 030 Hardware and Software.

I'm mostly interested in Music and Highend Graphics hardware software.

Some of Want List
TRAK COM
Other Various D2D Falcon Software
CUBASE FDI Hardware
ScreenEYE Digitiser
Expose Digitiser

Have some of this for sale, then e-mail me asking price, I will purchase
from overseas.
Also, Have other Falcon related hardware software? Just send me a list
with asking price.

thanks,
Barry

Hello Henk,

indeed satisfied. I just wanted to make sure that this useful feature is
working properly with AHCC.

BTW does AHCC support inlining of C functions with the keyword inline?

cheers,
Matthias

Hi,

I'm an Atarian, and I'd like to wish a Merry Christmas & Happy New Year.
So, I made a kick video, rendered with Persistence Of Vision, hereafter

<http://eureka.atari.org/walking.mov>

It's a PacMan dancing around a Christmas Tree. The character is modelled
in 3D2 with 3D Studio from Tom Hudson and exported with 3D2POV from Bill
Devonshire on ATARI. The tree is exported from Eureka 2.12, my software.

And remembering that 2012 is the New Year coming soon, this animation
with the PacMan tune, celebrates the "2.12". Isn't POV-Ray originally
written from DKBTrace 2.12, indeed ? This is a sign of the times :-)

I wish the best to you all.

ATARIstically yours =)

Folks, for the moment, the DarkForce BBS is offline.

I'm now sure what's going on. I've been working on it
for the last 3 hours with no success. The board is up
and running. I can logon locally at the Mega ST itself.
I can logon to the BBS from any machine on my local
LAN. I can not logon from any outside source.
I rebooted everything, cablemodem, router, Mega ST.

I logged into dyndns.org and checked my account there
They are showing my current IP address. So the daemon
I use on my Kubuntu box is working. I called Suddenlink
and asked them if they had added any ports to those
they already block. Nope. Port 23 is still open. I logged
onto my UDS1100. All settings look normal. I logged on
to my Router, checked the port forwarding - it all looks
like its supposed to, all port 23 requests are forwarded
to the UDS1100/Mega ST's LAN address of 192.168.0.104.

I can ping that address, no problems there.

So at this point I'm scratching my head...

I'll keep working on it and will let everyone know if/when
its back up.

Sorry for any inconvenience!

# 5957. Back up...

Newsgroup: comp.sys.atari.st
Date: 2011-12-06 14:56:47 UTC
From: "Ronald J. Hall" <darklord@suddenlink.net>
Message-ID: <4ede2d2f$0$15367$bbae4d71@news.suddenlink.net>
Source record: 525

Okay, I finally managed to squeeze enough time in to replace our old Dlink
router with a new Linksys.

I just used a remote access terminal and I was able to logon to DarkForce
okay.

Everyone just lemme know if you have any more problems. Keeping my
fingers crossed that this was it.

Really odd - the Dlink was working in every single aspect, except that it
was apparently failing to forward
any ip address requests.

Thanks! :)

PS Now I'm off to the mall with my wife.... the fun just never ends. :D

# 5964. WTB FDI unit for Cubase Audio Falcon

Newsgroup: comp.sys.atari.st
Date: 2011-12-20 23:27:55 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <4ef119fb$0$12392$bbae4d71@news.suddenlink.net>
Source record: 532

Hi,

I'm looking for a Sound Pool FDI unit to go with my Analog 8 Unit so that I can use it
with Cubase Audio Falcon and Zero X.

Also, does anyone know if the Analog 8 can be used on the Falcon without having the
FDI unit??

IF so, I sure could use the info on how to do it. I was thinking that maybe it would work
if one had the right cables.

I have the Analog 8 unit and a Cubase Audio DSP clock. Need to use the Clock with the
Analog 8 unit. I don't want the FDI unit unless there is no other way to use the Analog 8/clock.

However, if I can get a FDI unit for a fair price then I will purchase it.

Any info much appreciated
phantomm_1@suddenlink.net

# 5968. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2011-12-23 14:30:11 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4ef49074$0$5703$ba4acef3@reader.news.orange.fr>
Source record: 536
Body handling: HTML body converted to readable text

The ATARI bookmarks page was
updated. The goal consists in valid links, even if it corresponds to
sometimes dated information. Part of these bookmarks persist since the
creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 600, is to
constitute an ATARI uptodate and dedicated search engine of the online
scene. It is a service provided by Google Co-op. The base of this engine
is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its
creation, the *ATARI Search Engine* can possibly be integrated by
ATARI webmasters adding the HTML code

ATARI Search Engine

Have a good ATARI WEB Surfing =)

# 5969. Mega STE partially defect ... hints welcome

Newsgroup: comp.sys.atari.st
Date: 2011-12-26 20:19:21 UTC
From: Peter Dassow <z80eu@arcor.de>
Message-ID: <4ef8d6c9$0$6568$9b4e6d93@newsspool3.arcor-online.net>
Source record: 537

Hi,

after I tried several times to get a SCSI DCAS 34330 drive up and
running with my Mega STE (without success), I expirienced a non-working
second (external) SF-314 floppy and also the original Seagate ST157N
can't be accessed after rebuilding the original hardware configuration.
Surprisingly the internal floppy drive works well, and the computer
shows the GEM desktop as usual.
If the DMA chip died, I guess the internal floppy drive would not work,
too. So it's a mystery for me what can be defect... may be I have moved
the little ACSI pcb also a bit (because of the short SCSI cable), but at
the moment I am totally unsure where to look first.
Any hints for a smart repair ?

Regards
Peter

Hi Peter. Have you tried using these drives with other Atari machines,
just to verify that they are working?

Would go a long ways towards trouble-shooting your problem. At least, you
could rule out the drives being bad, and then concentrate on the Mega STe
itself.

I once had a similar problem.
The flat cables for the floppy and hard disk where nearly dead, I think
that when opening the machine, removing them, plugging, unplugging etc,
I must have cut it because it was too old. SO when rebuilding the
machine, nothing was working anymore.

I solved the problem with new flat cables.

Guillaume.

This would be a good idea (to narrow it), unfortunately I have no other
"ST" machine here.
Is there a block schematic diagram of all important STe chips out there
(how they working together) ?

Regards
Peter

# 5975. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2011-12-30 13:00:18 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4EFDB5E2.1040000@atari.org>
Source record: 543

Happy New Year 2012,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is updated for
Mac OS X Lion compatibility (10.7). It supports :

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 5982. NEVER BUY APPLE PRODUCTS ?

Newsgroup: comp.sys.atari.st
Date: 2012-01-04 09:32:08 UTC
From: Rodolphe Czuba <rodxxxxx.xxuba@free.fr>
Message-ID: <4f041c9f$0$6640$426a74cc@news.free.fr>
Source record: 550

I recently read this and was thinking Apple becomes a pioneer company
for the respect of the planet :
http://www.newzilla.net/2011/12/10/green-it-mothership-le-futur-siege-d%E2%80%99apple-fonc
tionnera-au-photovoltaique/
This tells that the futur HQ will have all the roofs with SOLAR PANEL
for green electricity : nice.. ?

And after my Friend Thierry (living in USA) sent me this :
http://www.ipe.org.cn/Upload/Report-IT-V-Apple-II.pdf.

OK, 2 years ago Greepeace Pointed Apple as very a bad company (like
DELL), for environmental things.
Now this is a second confirmation with a complet & serious investigation
(congratulation to the guys who did this).
Read especially page 23, 28 & 42 if no time to read all.
They kill many people in China with very bad suppliers that polluate
massively the waters with heavy metals (PCB manufacturing by example).

To resume between the 2 links :
APPLE is doing massive money by killing people and destroying the planet
with the great help of YOUR money, stupid guys you may be !
And to sleep everybody they will contruct a nice HQ with solar panels !

I have never bought Apple product and I will never buy for sure now !

I knew that Apple is not as "clean" as it wants people to think, but that seems to be quite scandalous (reached pg. 5).

> I have never bought Apple product and I will never buy for sure now !

Neither did/will I!

# 5986. Re: [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2012-01-08 17:18:20 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4f09cfdc$0$5703$ba4acef3@reader.news.orange.fr>
Source record: 604

Hi,

I was confirmed by the ARAnyM Devels Team with the present screenshot
<http://eureka.atari.org/miniPackLion.png> that the last version of the
*miniPack* <http://eureka.atari.org/miniPack.zip> is compatible with
Mac OS X Lion (10.7.2). There's two Mac applications in the miniPack :

`MacAranym` allows launching on PPC Macintosh with Mac OS X

This /Universal Binary/ version runs on PowerMac _and_ MacIntel with
a version of the system going from 10.3.9 (Panther) to 10.7.2 (Lion).
This is the "slow" version not including the Just In Time compiler
(JITc), but that runs on PowerMac.

`MacAranym JIT` allows launching on IntelMac with Mac OS X

This version which includes Just In Time compiler (JITc) is "fast"
but runs only on IntelMac. Concerning Mac OS X Lion (10.7) it is
remarkable to say since the last announces, that `MacAranym JIT`
runs in fullscreen mode, like all the applications of Lion would
deserve to B-)

Your opinion is welcome !

Francois LE COAT writes :

# 5987. Ultra Satan Drive, Abandoned!

Newsgroup: comp.sys.atari.st
Date: 2012-01-13 09:12:42 UTC
From: Bravo Sierra Computers <atari@aracnet.com>
Message-ID: <alpine.DEB.2.00.1201130103390.695@slate.spiritone.com>
Source record: 605

I Have Abandoned All Hopes For The Ultra Satan Drive!!! The Main Advantage To The Ultra Satan Drive Is Virtually No Moving Parts! So It May Never Wear Out! But For Me, The Overwhelming Disadvantages: 1) Does Not Use SCSI Hard Drives! So I Cant Attach My SCSI Hard Drives,So I Cant Transfer My Files From My Hard Drives To The Secure Digital Drives! That Means I'll Have To Move My Files To The Ultra Satan Drive Using 3.5" Floppies!Disadvantage 2) Since I Cant Hookup SCSI Devices, I Cant Use My SCSI CD ROM, My SCSI CD Writer Or Even My SCSI Flat Bed Full Color Scanner!And For Me, The Last Disadvantage 3) All My Atari ST Computers Use TOS v.1.4 Operating System!Ultra Satan Needs A Newer Version Of TOS Than My TOS v.1.4 Or it May Lose Data!So For Now, I'm Sticking To My 1 GigaByte SCSI HardDrive,At Least Until The Bugs Are Worked Out For TOS v.1.4!

=-Thanx-=

Ben, I use an Ultrasatan with TOS 1.04 on my STacy. I'm not aware of any
data loss problems?

Can you provide links to what you are referring to? Thanks.

Not sure I understand. I have my ste connected to the ultra satan, then
to a link then to a cr/cw drive then to a zip drive. I don't seem to
have any trouble transfering files back and forth.

Not sure I understand. I have my ste connected to the ultra satan, then to a link then to a cr/cw drive then to a zip drive. I don't seem to have any trouble transfering files back and forth.

Ben, I'd go to AtariForum or AtariAge (or both) and post this problem in
those places.

Lots of knowledgeable people there will try to help you.

# 5998. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2012-01-18 19:15:53 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4F171A69.5090303@atari.org>
Source record: 616

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is updated because
it now runs also with Windows (XP, Vista, Seven). It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
Windows, Mac OS X and GNU / Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Some people prefer not prehistoric storage devices :-)
And is not correct that TOS 1.04 may causing data loss. It will be
rather age of your beloved Atari.

PP http://atari.8bitchip.info - where can find right
answers .

I've Data Mined The Info About The Data Corruption! I'm Sorry To Report I Was Wrong! Data Corruption Had To Do With Transfer Between DOS & TOS Formats! The Information And The Link Are Directly Below!

http://joo.kie.sk/ultrasatan/faq.html

Question:

Do you have a preference for running UltraSatan with either (a) an Atari STE with (Tos 1.62/2.06) or (b) an STFM (Tos 1.4)?

Answer:

I would recommend using a machine with the newest TOS, so my choice would be STE with TOS 2.06, or at least 1.62. Older TOS versions have trouble (or are unable) to access SD/MMC cards formated with TOS & DOS compatibility (for easy data transfer between PC and Atari), they are slower in hard-drive access and some have fatal bugs which cause the partition losses on hard-drives or data corruption.

```
LS

There is a new version available on my home page (see sig)

Changes:

januari 24 2012
v4.9
Compiler:
Fixed a extremely stupid bug where comparisons of the kind
'constant compared to variable' were reversed wrongly.
e.g. (0 < i)

Fixed a terrible bug where under certain circumstances
a ftst insstruction got lost.

Accept spurious ampersand to a function name to get a
reference to that function.

There are FPU instruction that are NOT unary operaters.
These are: fmod, modf, ldexp and frexp.
Put these function in ahccstd.lib.

Fixed wrong code with comma expressions within expressions.

Coldfire:
Fix in the Coldfire Floating point code table.

Do not generate addressing mode 6 (An,Xn) with floating point
instructions.

Do not generate FScc instructions.
Repaired wrong divide for pointer difference calculation.

Library:
stdio.c: function tmpfile added.
string.c: function strtoul added.
stdlib.c: function system added.
ahccstdf.lib
Added support for missing FPU instructions on Coldfire.

If you aren't looking to download binaries then try nntp.aioe.org (see
www.aioe.org for setup). They are free. I've been using them for my BBS
newgroup feeds for years without issue.

> corruption.

That's pretty much general blah, even if is done by designer of
UltraSatan self. Yes, TOS 1.04 is little slower, but you will hardly
even notice 1% less speed. Fatal data bugs stay mostly for TOS 1.02 .
And it is not like that they happen often. Actually, they happen only
at some specific circumstances. By normal usage, when not opening too
much files and folders even TOS 1.02 is reliable. But TOS 1.04 is
much better. TOS 1.62 is in fact 99% same as 1.04 - it is just
expanded with STE specific things. Filesystem part is same as in
1.04 , Actually, if you have some ST, Mega ST, you can not go
simple on 2.06 - need additional logic for new TOS space. I have Mega
ST and ST 1024 equipped with TOS switch and can use any TOS in range
1.00 - 2.06 (1.62 is STE only, so not it, but have STE with) . It is
not true that TOS/DOS compatible partitioning works not with 1.04. It
works. And myself made multipartition TOS/DOS compatible hard disk
driver, etc.

TOS switch, with in circuit programming option (Flash ROM) :

# 6013. Seattle Retro-Computing Society's 1st 2012 meeting: Sat. Jan. 28th

Newsgroup: comp.sys.atari.st
Date: 2012-01-25 03:54:55 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <97ad8ab2-b842-46b3-8ed6-2afe7f79e52b@n8g2000pbc.googlegroups.com>
Source record: 631
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.ti,comp.sys.m6809,comp.sys.m68k

Come one, come all, to the Seattle Retro-Computing Society's first monthly meeting of 2012! It will be held Saturday, January 28th from 11:30 AM to 5:00 PM (please note our new, later starting time).

Do you do any of the following with old computers? Will you be near Seattle on Saturday?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you can
show off your awesome stuff, bounce ideas off of fellow enthusiasts, and
be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, which
is gradually fitting out a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you may want to show off!

For further details, please see our web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

## 6014. FireBee Laptop

Hi to everyone in this NG...

I rescued an Atari 1024STf, with and odd memory expansion to 2.5/2 MB (it depends on the weather,but this is another question ... ;

Well, Cubase 2.0, after loading, at first mouse movemente crashes with internal error xxxxx

I used to run it flawlessly on a 512 Gold (1MB).

It depends on the memory expansion ?
It's marked FSE and it's a bit complicated...

The TOS of the STF has problems with the 2.5 RAM. There was a fix you
could run from the AUTO Folder.

Supposing it's a matter of RAM, if the previous fix doesn't correct
this, there were two little programs to "downgrade" the STF to 1MB or
512KB for backwards compatibility.

That's what I remeber, but I can't tell you where to find them...

Guillaume.

Ehm ... TOS 1.02 ...
Must find the fix... I'm starting from HD, so no problem with the AUTO
folder...

# 6030. Spring-Time Retro-Computing Convention

Newsgroup: comp.sys.atari.st
Date: 2012-02-06 15:10:16 UTC
From: plbyrd@gmail.com
Message-ID: <1934638.4238.1328541016902.JavaMail.geo-discussion-forums@yqbf14>
Source record: 648

Since there will be no C4 this year, I have looked into doing a convention here in Clarksville, TN at the Riverview Inn (http://www.theriverviewinn.com/rvstie/). It would be the last weekend of May, (25-27) and we'd have the room for 48 hours. It's a very nice facility in a great location near the Cumberland River and just minutes from shopping, dining and recreation for the family.

I'm going to put down a deposit on the room, but I'd like to get an idea of how many people would be interested in coming.

The convention is open to fans of all retro computers and you are encouraged to reserve a table if you have something interesting to show and tell. If there are any volunteers we'll have presenters as well.

Please RSVP on Facebook, or send me a private message and I'll add you to the list.

Hi,

I need your help to fill my tests!

I wrote a Super PI program in assembler, you'll find it on my page (TEST 1)

http://gtello.pagesperso-orange.fr/kronos_soft.htm

Just run it and send me back the infos to add some lines to my table.
We'll keep the 16384 digits calculation as a base.

Thanks to everyone!

(you need a 68030 or better).

Guillaume.

# 6037. Seattle Retro-Computing Society meets Sat. Feb. 25th

Newsgroup: comp.sys.atari.st
Date: 2012-02-23 06:03:08 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <1ee51307-9ff0-47b1-bf05-e72210489d65@i10g2000pbc.googlegroups.com>
Source record: 405
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.ti,comp.sys.m6809,comp.sys.m68k

Come one, come all, to the Seattle Retro-Computing Society's regular monthly meeting! It will be held Saturday, February 25th from 11:30 AM to 5:00 PM (please note our new, later starting time).

Do you do any of the following with old computers? Will you be near Seattle on Saturday?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you can
show off your awesome stuff, bounce ideas off of fellow enthusiasts, and
be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, which
is gradually fitting out a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you may want to show off!

For further details, please see our web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

Ho, thanks ! The WEB site misses a "welcome.htm" file or
should it be called ".html" ? Anyway, something changed.
The WEB server's may have been modified, or the WEB files.

I will notice.

Regards,

# 6044. FS: Atari 2600 Deluxe Switching Power Supply

Newsgroup: comp.sys.atari.st
Date: 2012-02-27 20:32:43 UTC
From: Oge <oge@nospam.it>
Message-ID: <4f4be753$0$1393$4fafbaef@reader1.news.tin.it>
Source record: 412
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

It is a Limited Edition, made to get rid of the heavy and unregulated
original Atari 2600 AC/DC Adaptor. Also compatible with an unexpanded
Sinclair ZX-81 as they shares the same connector and the same polarity.

Link:
170789968141 (eBay)

Specifications:
. 9VDC @ 500mA
. OVP (Overvoltage Protection)
. Highly Filtered SMPS
. 110~220V Universal

Used for five hours in order to fully test its functionality.

Cheers,
Oge

# 6045. February winner at DarkForce!

Hello,

I have improved my ColorSTE, changed the name as it works now in mono
and not only on the STE (but on the ST and Mega ST).

In every resolution you get a new set of 12 icons, a sound at startup
(DMA or Yamaha).

In ST LOW, the menu bar, icons and windows are colored !

Everything is on my page:

http://gtello.pagesperso-orange.fr/colorste.htm

# 6051. RAM, Speed and Graphics Card Upgrades for 1040STE Computers…

Newsgroup: comp.sys.atari.st
Date: 2012-03-14 23:52:33 UTC
From: artisan213574@gmail.com
Message-ID: <11987947.808.1331769153892.JavaMail.geo-discussion-forums@ynje4>
Source record: 419

Hi. I had a question about upgrading my Atari 1040STE computer. I currently have 4 MB of RAM in it and a 16 MHz CPU (standard CPU, of course, for this type of Atari ST). I wanted to know how I could find a way to beef up the RAM, see how I could integrate a high-end graphics cards for it and find a way to improve the speed of the computer overall. I know the STE I have can address a RAM clock speed of 16 MHz, but was wondering how much RAM can really be installed in an 1040STE.

I also downloaded how to build the ET4000 graphics card off of the Atari ST Hardware Hacks website by Marcello "Vezz" Vezzelli, but I am wondering. Can an STE can be fitted with a more advanced card than that, as well as certain expansion slots (like PCI and AGP) to improve expandability? Is there something similar to a CT60 for the ST to upgrade the CPU? If not, can it ever be developed somehow? There must
be a way to integrate the technologies together. If not now, perhaps in the future.

Any advice is duly appreciated. Thanks.

# 6052. Where to find TOKI Line Test for Atari ST/Falcon…

Newsgroup: comp.sys.atari.st
Date: 2012-03-15 00:00:48 UTC
From: artisan213574@gmail.com
Message-ID: <23168804.1676.1331769648606.JavaMail.geo-discussion-forums@ynv11>

Hi again. Does anyone know where I could find the ST/Falcon Versions of TOKI Line Test? I found the old website where it was archived, but I cannot download it from said website(alas…). It is listed by the site as freely downloadable. If anyone can help me it would be most duly appreciated. Thanks! :D

I know the STE I have can address a RAM clock speed of 16 MHz, but was wondering how much RAM can really be installed in an 1040STE.

With the 24 bits of the address bus, it is 16MB max.
But some addresses are reserved for ROM and peripherials.
If you stop at $E0.0000 (start of ROM in the STE), then you have 14MB.

> I also downloaded how to build the ET4000 graphics card off of the Atari ST Hardware Hacks website by Marcello "Vezz" Vezzelli, but I am wondering. > be a way to integrate the technologies together. If not now, perhaps in the future.

The problem you'll have with every standard PC card is that the
encoding of the pixels is not the same as in the STE.
So, all off the low graphic routines of the VDI (particularly the
LineA) must be rewritten to fit the card specifications.

This is a tremendous work..! (put/get pixel, draw line, draw rectangle,
fill rectangle, fill polygon, write text, blitblock, etc...).

Else, there is a card for the ST that replaces the 68000 with a 68030,
the PAK/3. But hard to find...

Guillaume.

# 6061. Seattle Retro-Computing Society meets Saturday, March 24th

Newsgroup: comp.sys.atari.st
Date: 2012-03-19 23:16:18 UTC
From: SRCS Admin <searetcompsoc@gmail.com>
Message-ID: <12677975.3766.1332198978726.JavaMail.geo-discussion-forums@pbij6>

Come one, come all, to the Seattle Retro-Computing Society's regular monthly meeting! It will be held Saturday, March 24th from 11:30 AM to 5:00 PM (please note our new starting time, which is an hour later than it was last year).

Please read the important announcement about our website at the end of this message!

Do you do any of the following with old computers? Will you be near Seattle on Saturday?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, which is gradually fitting out a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you may want to show off!

For further details, please see our web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!
